The only function of a landlord that a Government exercises, is the general care for the progress of the estates ; making advances to enable the cultivators to sink wells or effect other improvements ; advancing money for general agricultural purposes (under special Acts) ; suspending or remitting the demand for revenue owing to famine or calamity of season.

The land revenue cannot then be considered as a rent, not even in raiyatwari lands, where the law (as in Bombay) happens to call the

as a *locus standi* for redistributing, conferring, and recognizing rights on a new basis.

And the outcome of the action taken by the Government was this—that it at once recognized certain rights in private individuals, and only retained such rights for itself as were necessary.

The power to make this distribution was no doubt based on the *de facto* power of the Government to dispose of all land.

I may exhibit the main features of the disposition of landed rights made by Government under five heads.

- (1) Government used its own eminent claim as a starting-point from which to recognize or confer definite titles in the land, in favour of persons or communities that it deemed entitled.
- (2) It retained the unquestionable right of the State to all waste lands, exhibiting, however, the greatest tenderness to all possible rights either of property or of user, that might exist in such lands when proposed to be sold or granted away. This right it exercised for the public benefit, either leasing or selling land to cultivators or to capitalists for special treatment : thus encouraging the introduction of tea, coffee, cinchona, and other valuable staples. Or it used the right as the basis for constituting State Forests for the public benefit, or for establishing Government buildings, farms, grazing grounds, and the like.
- (3) It retained useful subsidiary rights such as minerals, or the right to water in lakes and streams. In some cases it has granted these away, but all later laws reserve such rights.
- (4) It retained the right of escheat : and of course to dispose of estates forfeited for crime, rebellion, &c.
- (5) It reserved the right necessary for the security of its income (a right which was never theoretically doubtful from the earliest times) of regarding all land as in a manner hypothecated as security for the land revenue. This hypothecation necessarily implies or includes a right of sale in case the revenue is in arrears.

After Government has so distinctly conferred proprietary rights in land, any later use of the term 'universal landlord', as applied to Government, can only be in the nature of a metaphor, or with reference to the ultimate claim of Government alluded to in the last paragraph or that which arises in case of a failure of heirs.

The only function of a landlord that a Government exercises, is the general care for the progress of the estates ; making advances to enable the cultivators to sink wells or effect other improvements ; advancing money for general agricultural purposes (under special Acts) ; suspending or remitting the demand for revenue owing to famine or calamity of season.

The land revenue cannot then be considered as a rent, not even in raiyatwari lands, where the law (as in Bombay) happens to call the

holder of land an 'occupant', not a proprietor. The reason for adopting this term will be noticed in the chapter on Bombay tenures. Here it is enough to say that the special definition does not entitle Government to a true rent. Nowhere, and under no revenue system, does Government claim to take the 'unearned increment', or the whole of what remains after the wages of labour, or cost of cultivation and profits of capital, have been accounted for.

If we cannot be content to speak of 'land revenue' and must further define, I should be inclined to regard the charge as more in the nature of a tax on agricultural incomes.¹

§ 4. This view, though entitled to much consideration, does not meet with universal acceptance. There is controversy, both in official circles and among Indian publicists, as to whether government revenue from land is a rent or a tax. A decision is evaded by its description in the Indian accounts as 'revenue'. It remains true none the less that the British administration inherited from the Mughal Empire a system of public finance which was capable of being brought into strict accord with the theories afterwards propounded by Henry George and his followers. The rent obtainable from land itself, apart from returns on account of improvements, the true rent that is to say, is not due to the efforts of the private owners or cultivators. It arises from some natural superiority in the character or position of the rent-bearing land, as compared with other land, which would only support the cultivator provided he received the whole of the returns. The moment a plot of land, by reason of the superiority of its soil, climate, or position, is capable of yielding more produce than the cultivator requires for his support, that cultivator is in a position to sublet it to some other husbandman who will pay that difference for the right to live on it. The value of its products may be enhanced by a variety of conditions beyond the control of the cultivator or owner. The enforcement of law and effective protection by the state, such as was afforded by the Mughal Empire and the British administration, are cases in point. The growth of a city affording a market in the neighbourhood of the land is another. And apart from all these factors there must be a general growth in the cash value of the produce, because, while the population of the world continues to increase, the area of its soil remains fixed. In any case the *true economic rent* of land is not due to the efforts of the cultivator or owner. It is of the nature of unearned increment due to its intrinsic superiority over poorer land or

¹ *Land Systems of British India*, by B. H. Baden-Powell, vol. i, p. 234.

holder of land an 'occupant', not a proprietor. The reason for adopting this term will be noticed in the chapter on Bombay tenures. Here it is enough to say that the special definition does not entitle Government to a true rent. Nowhere, and under no revenue system, does Government claim to take the 'unearned increment', or the whole of what remains after the wages of labour, or cost of cultivation and profits of capital, have been accounted for.

If we cannot be content to speak of 'land revenue' and must further define, I should be inclined to regard the charge as more in the nature of a tax on agricultural incomes.¹

§ 4. This view, though entitled to much consideration, does not meet with universal acceptance. There is controversy, both in official circles and among Indian publicists, as to whether government revenue from land is a rent or a tax. A decision is evaded by its description in the Indian accounts as 'revenue'. It remains true none the less that the British administration inherited from the Mughal Empire a system of public finance which was capable of being brought into strict accord with the theories afterwards propounded by Henry George and his followers. The rent obtainable from land itself, apart from returns on account of improvements, the true rent that is to say, is not due to the efforts of the private owners or cultivators. It arises from some natural superiority in the character or position of the rent-bearing land, as compared with other land, which would only support the cultivator provided he received the whole of the returns. The moment a plot of land, by reason of the superiority of its soil, climate, or position, is capable of yielding more produce than the cultivator requires for his support, that cultivator is in a position to sublet it to some other husbandman who will pay that difference for the right to live on it. The value of its products may be enhanced by a variety of conditions beyond the control of the cultivator or owner. The enforcement of law and effective protection by the state, such as was afforded by the Mughal Empire and the British administration, are cases in point. The growth of a city affording a market in the neighbourhood of the land is another. And apart from all these factors there must be a general growth in the cash value of the produce, because, while the population of the world continues to increase, the area of its soil remains fixed. In any case the *true economic rent* of land is not due to the efforts of the cultivator or owner. It is of the nature of unearned increment due to its intrinsic superiority over poorer land or

¹ *Land Systems of British India*, by B. H. Baden-Powell, vol. i, p. 234.

to the efforts of the community as a whole. The argument, therefore, is that this unearned increment should inure to the benefit, not of the individual cultivator or owner, but to the community as a whole. The followers of Henry George have urged that this unearned increment will suffice to meet all the public expenses, if reserved to the state, which will therefore be relieved from the necessity of imposing taxes properly so called. The school of economists holding these doctrines has been given the inappropriate name of single-taxers. Their real doctrine is that no taxes at all would be needed, if rent, and the increase in rent, were reserved to the service of the community which creates it. Whether from the name of the American thinker who first developed these doctrines, or from that of their greatest practical exponent, Mr. Lloyd George, they may with convenience be referred to as the 'Georgian principle'.

§ 5. Had Henry George lived and propounded these doctrines a century earlier, they would probably have exercised from the outset a determining influence on the history of the revenue system in India. Rarely has the government of an old and populous country been so well situated as the British administration was in the eighteenth century to claim the ownership of all the land and the public right to the gradual increase in the value of the rent it yielded. It inherited that claim from the Mughal Empire, and it also had, as an example to be followed, the system of Akbar, whereby a fresh valuation of the rent could be made from time to time, and the increase thereof could be realized for the service of the state.

If throughout India the land were re-valued periodically, if the true rent was ascertained, and if that amount, subject only to fair commission paid to intermediary collectors, accrued to the community at large, the ideals of Henry George would be nearer to realization in this ancient country even than in newer communities, to which they are *prima facie* more easily applicable. It might even have proved that the whole public cost of an administration so economical as that of India¹ might have been met from the growing

¹ An Indian critic notes: 'The administration of India is described as particularly economical. Is it so? The public demand for the administration of the country may be low, but the actual cost of the existing machinery of administration is generally believed to be the highest in the world when compared with the corresponding machinery of administration in other countries of the world. This belief is based on such facts as are stated in the article on "Cost of Administration in India, Japan, and

to the efforts of the community as a whole. The argument, therefore, is that this unearned increment should inure to the benefit, not of the individual cultivator or owner, but to the community as a whole. The followers of Henry George have urged that this unearned increment will suffice to meet all the public expenses, if reserved to the state, which will therefore be relieved from the necessity of imposing taxes properly so called. value of rent without resort to taxation in the true sense of the word.

§ 6. Such were the possibilities, had they been foreseen, of a just distribution of the public burdens, when, in the time of Warren Hastings and his successor Lord Cornwallis, the British East India Company found itself entitled, by virtue of a direct grant from the Mughal Empire, to the public revenues of Bengal, Behar, and Orissa. The subsequent treatment of those revenues by the Company was influenced by two dominating factors.

In the course of one hundred and fifty years of disorder the surveys and records initiated by Akbar had practically disappeared. At that time, moreover, the Company had no trained staff at its disposal competent to frame such records anew.

In the second place the only system of land-tenure known to the Company and its officers was that established in England. The English landlord was then regarded as the backbone of the British constitution. The country gentleman, by virtue of his influence as a landlord, enhanced by his official position of justice of the peace, was the mainstay of public order and administration in his own countryside. From the income he drew he was expected to make improvements in the holdings of his tenants, and from the land he kept in his own hands to set an example of enlightened and progressive cultivation.

When the Company's officials addressed themselves to the task of collecting the land revenues of Bengal, they found that the zamindars or tax-farmers were the persons who had been liable for the payments to the government, and were, indeed, the only agency through which the revenue could be collected. Superficially the position claimed by the zamindars resembled that of the English landlords. The Company's staff, who knew more about trade than land-tenures, were in numbers as well as in training unequal to the task of compiling the elaborate data necessary to enable a collection to be made from the cultivators themselves. They, therefore, confined themselves to the task of determining with the aid of the kanungos,——

(1) Who were the zamindars responsible for the revenue of each locality.

U.S.A.", by Lala Lajpat Rai, published in the *Modern Review* of January 1916.

The subject is discussed in the later pages of this study.

value of rent without resort to taxation in the true sense of the word.

§ 6. Such were the possibilities, had they been foreseen, of a just distribution of the public burdens, when, in the time of Warren Hastings and his successor Lord Cornwallis, the British East India Company found itself entitled, by virtue of a direct grant from the Mughal Empire, to the public revenues of Bengal, Behar, and Orissa. The English landlord was then regarded as the backbone of the British constitution. The country gentleman, by virtue of his influence as a landlord, enhanced by his official position of justice of the peace, was the mainstay of public order and administration in his own countryside. From the income he drew he was expected to make improvements in the holdings of his tenants, and from the land he kept in his own hands to set an example of enlightened and progressive cultivation.

When the Company's officials addressed themselves to the task of collecting the land revenues of Bengal, they found that the zamindars or tax-farmers were the persons who had been liable for the payments to the government, and were, indeed, the only agency through which the revenue could be collected. Superficially the position claimed by the zamindars resembled that of the English landlords. The Company's staff, who knew more about trade than land-tenures, were in numbers as well as in training unequal to the task of compiling the elaborate data necessary to enable a collection to be made from the cultivators themselves. They, therefore, confined themselves to the task of determining with the aid of the kanungos,——

(1) Who were the zamindars responsible for the revenue of each locality.

U.S.A.", by Lala Lajpat Rai, published in the *Modern Review* of January 1916.

The subject is discussed in the later pages of this study.

(2) How much revenue that locality was capable of realizing as judged by recent collections.

At first these assessments were revised every ten years, and the zamindars were made responsible to the Company for 90 per cent. of the assessment, 10 per cent. being left to them as commission. It is a point always to be remembered that the assessments which preceded the permanent settlement of Bengal were not based upon any surveys or record of rights.

§ 7. The policy of recognizing the zamindars in Bengal was never in question. John Shore advised it no less than Cornwallis himself. The only point in dispute between Cornwallis and his able and experienced lieutenant was as to the expediency of the periodic revisions of the amounts for which the zamindars were to be made responsible. Contrary to the views of Shore, the argument in favour of putting the zamindars in the same position as the English landlords prevailed. The Directors agreed with the arguments of Cornwallis that the payments of the zamindars should be permanently fixed on the basis of the assessment of 1793.

The proclamation, after reciting that the Governor-General-in-Council had been empowered by the Court of Directors to 'declare the jumma which has been or may be assessed upon their lands . . . fixed for ever' went on to say: The Governor-General-in-Council accordingly declares to the zamindars, independent taluqdars, and other actual proprietors of land with or on behalf of whom a Settlement has been completed, that at the expiration of the term of the Settlement (ten years) no alteration will be made in the assessment which they have respectively engaged to pay, but that they and their heirs and lawful successors will be allowed to hold their estates at such assessment for ever.¹

This meant the conversion of their liability to the state for the true rent, less a commission representing the cost of collection, to a quit rent or fixed tax on land similar to that imposed on English estates. They would thus become landlords in the true sense of the term, and the gradual increment of rent would then accrue to their own profit instead of to that of the public purse.

§ 8. From these funds, as Cornwallis believed, they would effect improvements on their estates in the spirit of a good English landlord. They would further be interested as a class to support the government which had made this

(2) How much revenue that locality was capable of realizing as judged by recent collections.

At first these assessments were revised every ten years, and the zamindars were made responsible to the Company for 90 per cent. of the assessment, 10 per cent. being left to them as commission. It is a point always to be remembered that the assessments which preceded the permanent settlement of Bengal were not based upon any surveys or record of rights.

§ 7. The policy of recognizing the zamindars in Bengal was never in question. John Shore advised it no less than Cornwallis himself. The only point in dispute between Cornwallis and his able and experienced lieutenant was as to the expediency of the periodic revisions of the amounts for which the zamindars were to be made responsible. Contrary to the views of Shore, the argument in favour of putting the zamindars in the same position as the English landlords prevailed. The Directors agreed with the arguments of Cornwallis that the payments of the zamindars should be permanently fixed on the basis of the assessment of 1793.

The proclamation, after reciting that the Governor-General-in-Council had been empowered by the Court of Directors to 'declare the jumma which has been or may be assessed upon their lands . . . fixed for ever' went on to say: 'The Governor-General-in-Council accordingly declares to the zamindars, independent taluqdars, and other actual proprietors of land with or on behalf of whom a Settlement has been completed, that at the expiration of the term of the Settlement (ten years) no alteration will be made in the assessment which they have respectively engaged to pay, but that they and their heirs and lawful successors will be allowed to hold their estates at such assessment for ever.'

This meant the conversion of their liability to the state for the true rent, less a commission representing the cost of collection, to a quit rent or fixed tax on land similar to that imposed on English estates. They would thus become landlords in the true sense of the term, and the gradual increment of rent would then accrue to their own profit instead of to that of the public purse.

§ 8. From these funds, as Cornwallis believed, they would effect improvements on their estates in the spirit of a good English landlord. They would further be interested as a class to support the government which had made this

¹ *Land Systems of British India*, by B. H. Baden-Powell, vol. i, p. 400.

settlement; for the real permanence of the settlement would largely depend upon the government which made it. Identified by their interests with the government they would act as centres of authority in their own district, and would aid the government in preserving order and in enforcing law. The vast enhancement in the value of rents, which was destined to take place, was not foreseen.

§ 9. By this decision the freehold title was practically alienated by the state and vested in the zamindars, who were by origin the agents of the government for the purpose of collecting the rents. This system, known by the name of the Permanent Settlement, has been applied to five-sixths of the land in Bengal, Behar, and Orissa, to one-eighth of Assam, to one-tenth of the United Provinces, and to one quarter of Madras, which together represent one-fifth of the total area of British India and include the richest part of that area. The result is that this 20 per cent. of the area of British India yields only 16 per cent. of its total revenues from land. The relation of the revenue to the rent has now fallen from over 90 per cent. to less than 25 per cent.

§ 10. The effect on one particular district, Faridpur, is best stated in the words of the district officer.

The land tax is a legacy of the Permanent Settlement and has never been varied for over 120 years. When originally imposed it nominally represented 91 per cent. of the rent paid by the cultivators of the soil, the remaining 9 per cent. being retained by the agents who collected the rent. There seems reason to believe, however, that it really represented a much smaller proportion of the rent and that the land-owners who collected it retained a much larger proportion than was intended. In any case the effect of the Permanent Settlement was to convert tax collectors into landlords and to assure to them the natural increase in value which peace and growing prosperity and population would confer upon the land. Had the Permanent Settlement not been effected the whole of this increase would have become land tax payable to the Central Government; it now goes to the landlords, who have thereby secured about 2,400,000 rupees or £160,000, their profits from the land having increased six-fold since the Permanent Settlement was concluded, while the land tax remains at the same figure, £40,000, at which it was fixed 120 years ago.¹

¹ *The Economic Life of a Bengal District: A Study*, by J. C. Jack, pp. 115-16. This remarkable book was put together by Mr. Jack for the Clarendon Press in the space of not many hours before he left for the front, in order that the elaborate materials collected by numerous Indian assistants might not be lost in the event of his death. He fell in France some time after this study was printed.

settlement; for the real permanence of the settlement would largely depend upon the government which made it. Identified by their interests with the government they would act as centres of authority in their own district, and would aid the government in preserving order and in enforcing law. The vast enhancement in the value of rents, which was destined to take place, was not foreseen.

He fell in France some time after this study was printed.

Ten years ago the loss to the public revenues was estimated at 9 crores of rupees at least, or about £6,000,000. That loss has either to be met by taxpayers other than the zamindars, or the people of India must forgo benefits in the shape either of education or of some other service to the extent of £6,000,000 per annum.

§ 11. The social benefits reaped by the permanent settlement have not been commensurate with the hopes entertained by Lord Cornwallis. To a certain extent the larger zamindars have supported the existing fabric of government, and have acted as pillars of law and order. On the other hand government has been forced to intervene to protect the tenant against the landlord. As in Ireland a series of laws have been passed on the subject. Applied to a people by nature litigious these laws have led to a mass of litigation which ever increases—and a consequent growth in the number of lawyers. Not merely the substance of the people, but the energy which might be devoted to increasing that substance, is wasted on law-suits.¹

§ 12. Since the share in the produce of land due to the government was fixed, the rent obtainable by the landlords has largely increased. But the value of the improvements effected by them on their land has been negligible.

For one thing the funds available for improvements, instead of remaining in the hands of a single landlord responsible for making improvements on one estate, have largely been subdivided. 'A Bengal record-of-rights is in itself a totally different and infinitely more formidable document than anything of its kind elsewhere.' (The United Provinces, for instance.)

Referring to the difficulty of recording these subdivisions, the Bengal District Administration Committee, which reported in 1914, goes on to say :

The original ownership of the village has in many cases been split into a bewildering maze of vertical and horizontal subdivisions

¹ An Indian critic notes : ' The growth in the number of lawyers has been ascribed to the permanent settlement. But this perhaps is not right. Other causes are responsible for the increase in their number. Lawyers are constantly growing in number in provinces not permanently settled. And in these provinces (U.P.), although practically the whole of the litigation relating to tenancy is in the hands of revenue agents, the number of lawyers proper (pleaders, vakils, and barristers) is rapidly increasing.'

The growth of litigation is of course due to a number of contributory causes, of which the tenancy laws are one. Tenancy laws exist not only in the permanently settled areas, but wherever a system of zamindari is in vogue

1. The first step is to identify the problem. This involves understanding the current situation and what needs to be changed.

the world's largest and most powerful nations. The United States, China, and Russia are the three most powerful nations in the world, and they are all members of the G7. The G7 is a group of seven major industrialized nations, and it is the only group of nations that includes all of the world's major powers. The G7 is a forum for the world's major powers to discuss international issues, and it is the only group of nations that includes all of the world's major powers. The G7 is a forum for the world's major powers to discuss international issues, and it is the only group of nations that includes all of the world's major powers.

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.05	0.02	2.50	0.01
Gender of the head of household (Male = 1, Female = 0)	-0.10	0.03	-3.33	0.00
Constant	1.50	0.10	15.00	0.00

The regression results indicate that the number of children in the household is positively related to the age of the head of household and negatively related to the gender of the head of household. Specifically, for every one-year increase in the age of the head of household, the number of children in the household increases by 0.05, holding all other factors constant. Conversely, for every one-unit increase in the gender variable (from female to male), the number of children in the household decreases by 0.10, holding all other factors constant.

Abstract

100

that require a skilled agency to trace out and record. Where proprietary tenures are quite commonly found 7 and 8 deep and in some cases 12, 15, or even 17 tenure holders are recorded one below the other; where each of these strata of proprietorship is divided up among equally numerous sharers; where a single proprietor very frequently holds tenures in several of these strata; and where finally most of the tenure holders are absentees and not continuously represented in the village: here is a state of things in the face of which an agency like that in the United Provinces and Central Provinces would be entirely helpless.¹

These sub-infeudations were the direct result of the British settlement. Under Mughal rule the tax-farmers' rights were not so firmly established as to be capable of sale. No one would buy them. But no sooner were the zamindars recognized and registered by the Company than their rights became negotiable. They discovered they had property which could be sold for cash. And people with money to invest were willing to buy, because they found that the rights purchased were really enforceable in the courts established under British rule. It is a tragic fact that an immense impetus has been given to the habit of litigation by the efficacy and purity of British justice.²

¹ *Report of the Bengal District Administration Committee, 1913-14*, p. 70.

² A British collector notes: 'I fear this is too flattering a view of British justice, and would attribute it rather to its *blindness* and glorious *uncertainty*. Pure it is as a rule, but I fear not infrequently mistaken.'

An Indian critic writes to the same effect. 'The impetus to the habit of litigation has been ascribed to the efficacy and purity of British justice.'

'That along with much efficacy there is a lot of inefficacy in the administration of justice in this country, and this inefficacy is one of the principal causes of the increase of litigation is an unpleasant fact seldom recognized. An efficient court of justice can attract none but those who have a just claim or real grievance to put forward, and unnecessary and improper litigation cannot flourish in such a court. But, as our system of law is highly technical and suited for thwarting justice by those who may be interested in doing so, and as competent men among the judges in the districts happen to be there only by accident, the dishonest and professional litigants flourish so well as they could never have flourished under any other system. Till very recently men who were appointed district judges (whose duty among other things was to hear appeals from decrees of lawyers, judges of long experience, subordinate to them) used to be entirely ignorant of civil law. The change recently introduced, in some respects, makes matters worse, but it will be out of place to go into detail here. The subordinate judges and munsiffs are generally recruited from members of the bar who either have failed in the profession or have no prospect of success. The ability shown by many District Judges and their subordinates is in spite of the system of selection and not on account of it. How the technicalities of the law and the inability of the courts to deal with them properly thwarts justice will appear from the following quotation

The subordinate judges and munsiffs are generally recruited from members of the bar who either have failed in the profession or have no prospect of success. The ability shown by many District Judges and their subordinates is in spite of the system of selection and not on account of it. How the technicalities of the law and the inability of the courts to deal with them properly thwarts justice will appear from the following quotation

§ 13. The result was that many of the zamindars, finding how easy it had become to raise money by sale, developed extravagant habits. Then the increase in the value of their rights, which followed the permanent settlement, enabled them to sell a share of their income, while still retaining the rest. A zamindar would sell for a lump sum the right to collect the rents of his estates subject to an obligation on the part of the purchaser to pay the seller and his heirs a fixed sum per annum. Thus while retaining a fixed rent-charge he sold the right to the further increment. Then as the value of the increment grew the purchaser was able to repeat the process by retaining a fixed rent-charge and selling to a third party the right to the balance and the future increment. The object of these sales was not merely to raise money for marriage and other ceremonies, but also to pay the cost of litigation. The result is that the rights to land are now divided into a series of strata, which are often as many as 7 or 8 and in some cases double those numbers. The Hindu custom whereby members of a family continue to share in one inherited property operates to divide each layer of rights by a number of horizontal divisions. The accounting and legal machinery necessary to work such a complication of rights in practice eats up money which ought to go back into the land.

Where Cornwallis hoped to make one landlord responsible for improvement of the estate, the general result has been so to divide the control and responsibility as to destroy it.

§ 14. The system has thus tended to multiply rent chargers, who live on the produce of land without doing anything by their labour to increase it. These rent chargers, divorced from the habit of tillage, have increased more rapidly than the rents upon which they subsist. They constitute the class known in Bengal as the *bhadralok*, whose growing impoverishment has lately been enhanced by the rise in

from a judgement of the Privy Council delivered by Lord Hobhouse in 1896 (see I.L.R. 19 Allahabad 155 at 160): 'This case exhibits as lamentable a waste of time and money in litigation as ever came under their lordships' observation. An account which the plaintiff asked for in the year 1879, and to which his right was affirmed in the year 1880, has not even been commenced (that is, in 1896), *the defendant having been allowed to delay it by objections to the formal regularity of the procedure.*' . . . Then at p. 165: 'Their lordships will humbly advise His Majesty that the appeal ought to be dismissed, and the decree of the High Court affirmed. Whether a fresh reference to the district judge will bring about an examination of the merits of the case, or only a renewed tossing of it from court to court, is, having regard to its previous history, a very obscure problem.'

prices. Largely drawn from the scholarly castes, the Brahmins and Kayasths, they have destined their sons for the clerical professions, more especially for government service and the law. Hence the demand for English education. The policy of government has encouraged this tendency. Had government thought from the outset of fitting the people for the various and rapidly changing conditions of life, their administration might have contributed more in the end to moral and political as well as to material progress. They thought rather of implanting in India the kind of literary culture familiar to graduates of Oxford and Cambridge in the days of Macaulay. But this educational ideal, such as it was, was largely obscured and distorted by a desire to make the system subserve an administrative end. From the first the system was designed largely for the purpose of training young men for the public service. The only utilitarian purpose they kept in view was a dangerously narrow one. As in England itself the rulers of India were slow to foresee that times were at hand when nations must fail in the race unless they are trained for the place in the state which they are called upon to fill. If the millions of India were to wake from their long sleep and compete in the race, it was necessary that their youth should be trained to agriculture and industry no less than to official life.¹

§ 15. Generally speaking there is little or no demand on the part of private employers for the products of the educational system. Technical education has been attempted, but on lines so theoretical that 'it has provided no Indian employes for the great local industries of Calcutta, and a notoriously large number of its students take up employment for which their special training is of little use. Institutions which

¹ A British collector notes: 'I have always believed that Macaulay believed that education would be deemed an end in itself, as it largely was among the classes who were educated on the line of "literary culture", here referred to. That kind of education was certainly not adopted with a view to earning a living, but was adopted by a class that, as a rule, had an assured income. Such an idea is almost wholly foreign in India. Education here is solely regarded as a means to livelihood; and the view of those who have received that "literary education" is that Government has educated us so as to make us unfit for any occupation our fathers ever followed or any that we can of ourselves follow; therefore it is the duty of Government to provide an occupation for which its education *has* fitted us. A not unnatural line of argument, but inevitably a cause of discontent. I doubt if any single human being throughout all history ever did more real and abiding harm to India than Macaulay.'

at vast expense teach a more advanced theory than the pupil will ever have occasion to use in practice, unfit him for the employment he is likely to obtain'.¹ It will thus be seen that the permanent settlement has encouraged the growth of a large class who, turning their backs on agriculture, and having neither the capital nor the training for industry, have eagerly sought employment in government service and the clerical professions. The system of education has failed to equip them for other employments with the result that many of them drift into want and even crime. As in the seventeenth and eighteenth centuries in Europe youths of birth and breeding took to the road, so in modern Bengal it is educated youths who are driven to dacoity.² And, as the Committee found, the system of education creates a positive distaste for agriculture.³ Independent evidence in support of these views appears in the course of the minute study of the district of Faridpur made by the Collector, Mr. J. C. Jack, to which reference has already been made.

Only a few of the village lads go to school, and village schools are very primitive institutions. There is no prejudice against learning, but even the most careless observer must notice the tendency of lads who have gone to school to refuse to work in the field and to despise their unlettered fathers. Elementary education may be a very blessed thing, but it would seem that in an agricultural country it needs to be universal if it is not to prove a curse.

Even more convincing is the following testimony recorded

¹ *Report of the Bengal District Administration Committee*, pp. 178, 185.

² An Indian critic notes: 'Want of employment has been mentioned as a cause of the educated youths in Bengal taking to dacoity.'

'That many educated youths in Bengal find it difficult to get employment is quite true, but I believe it has nothing to do with their committing dacoities. These dacoities have all along been recognized as 'political dacoities'. The anarchical activities in Bengal have been described in the *Indian Year Book* for 1916 (p. 1) as "proof of the existence of a small band of anarchists in India determined to try and overthrow the British Government, even if it has to plunge the country into chaos in order to achieve it". The origin of these dacoities can be traced to the book (*Ananda Mal*, a novel by the great Bengali novelist, Bantain Chanda (Chatterjee) which provides us with the famous national song commencing with the words "Bande Mataram". In this book there is an account of a band of men who used to commit dacoity with the object of making rich people part with their money for the public good. Some of the imaginative and emotional youths of Bengal took a lesson from this book and started committing dacoities; though later some young men may have joined them with a different object.'

³ *Report of the Bengal District Administration Committee*, p. 175.

The first part of the paper discusses the importance of the
 Journal of Management Education in the field of management
 education. It highlights the journal's role in providing
 a platform for the dissemination of research findings and
 the advancement of the discipline. The second part of the
 paper focuses on the journal's commitment to diversity and
 inclusion, emphasizing the need for a more equitable and
 inclusive research agenda. The third part of the paper
 discusses the journal's efforts to promote the use of
 research in management education, highlighting the
 importance of evidence-based practice. The fourth part of
 the paper discusses the journal's commitment to
 transparency and accountability, emphasizing the need for
 open access and the sharing of research data. The fifth
 part of the paper discusses the journal's commitment to
 the development of the field of management education,
 highlighting the need for ongoing research and
 innovation. The sixth part of the paper discusses the
 journal's commitment to the advancement of the
 discipline, highlighting the need for a more
 comprehensive and integrated approach to research.

The origin of these dacoities can be traced to the book (*Ananda Mat*, a novel by the great Bengali novelist, Bantain Chanda Chatterjee) which provides us with the famous national song commencing with the words "Bande Mataram". In this book there is an account of a band of men who used to commit dacoity with the object of making rich people part with their money for the public good. Some of the imaginative and emotional youths of Bengal took a lesson from this book and started committing dacoities; though later some young men may have joined them with a different object.'

in a letter from a Bengal student to his teacher in the year 1916.

I left the place for another village some eleven miles away. The distance I walked without any umbrella in the scorching sun. That village is proverbially poor in sanitary conditions, almost every year suffering from malaria, cholera, and other bad diseases. The recent malarial attack carried away many poor souls. During my visit the village, generally speaking, was keeping good health. My object of going to it was to talk to the villagers of the usefulness of quinine medicine, although the only antidote of malaria, people carefully avoid making use of. I thought two days would be sufficient for the purpose. I usually used to catch hold of eight or ten men either in a sitting house or under a tree, and in the course of conversation about rural topics explain the powerful efficacy of the drug. Many have consented to try. What I discovered to my utter delight was this, that they would be all frank with you only if you condescend to put aside your academic airs. They are very good fellows. One day while I was talking about the benefits of education, one elderly man very emphatically and justly too made the following remark which I shall never forget. 'Babu, we are poor. We must cultivate for our bread, literary education makes boys hate manual labour. Just see the boys of our village. The son of our Mondal reads in the School. His father works so hard in the field, but he never *breaks a straw*. If our children after getting education (primary) do not work with us, we shall certainly cease to live.' The statement is extremely funny, nevertheless true. On inquiry I learn there were some five boys of that type. I then very strongly felt it to be my duty to stay a few days more and if I could leave things better. From that day I began to work in the field along with the cultivators. You know our parents are very fond of smoking their hookahs. I used to go to the field and relieve one man so that he could smoke. The offer that I made was never unwelcome. Sometimes many men would stand round the land to see me working at the plough. I enjoyed so much. This I did in the morning. In the noon, I contrived to gather the schoolboys, and spoke to them. They were very much impressed. In the afternoon I used to plant brinjal and other season plants, and water those already planted. After a day's experiment I saw some signs of change. Those boys gradually joined and afterwards they hardly allowed me to do anything—they doing all. On the last day but one of my stay there, I was ploughing and a thorn ran deep into my toe which swelled and made me unable to walk. I took it to be a warning to return to my studies. The letter is long though you have no time to read. Excuse if I tire you.

§ 16. The general result has been a steady growth of unrest in Bengal. The failure of government to cope with it is

the 1990s, the concept of information science has been widely used in the literature.

Information science is a broad term that encompasses a wide range of disciplines and fields. It is a multidisciplinary field that draws on the knowledge and methods of many different disciplines, including computer science, mathematics, psychology, sociology, and philosophy. The goal of information science is to understand the nature of information and how it is created, stored, and communicated. It is a field that is constantly evolving, as new technologies and methods are developed and applied to the study of information. Information science is a field that is essential for the development of a modern society, as it provides the tools and knowledge needed to manage and communicate information effectively. It is a field that is essential for the development of a modern society, as it provides the tools and knowledge needed to manage and communicate information effectively. ascribed to two principal causes. The first of these is a want of touch between government officers and the people. In districts not permanently settled the duty of checking and revising the revenue records is the principal agency in bringing collectors and their subordinates into touch with the people themselves.¹ In Bengal the villagers see little or nothing of government officers other than the police. Government is thus visible to them mainly in its aspect of repression, and administrative officers know too little of the people they rule. As a record of rights is now in process of construction this particular defect is perhaps on the way to be remedied.

A second reason is that, for want of the revenue which the permanent settlement has absorbed, the increase of government officers has not kept pace with the growth of the population. One district contains upwards of 4,500,000 souls, and seven others contain more than 2,000,000. The Government of Bengal, meanwhile, was long hovering on the verge of bankruptcy, and want of funds, due to the permanent settlement, has stood in the way of reform. And yet, as Mr. Jack shows in his careful study, Bengal, as judged by his own district, is one of the most lightly taxed communities in the world.

§ 17. Incidentally it must be observed that the loss of revenue involved by the permanent settlement is equally divided between Bengal and the Government of India. Bengal, therefore, contributes less than its share to the national expenses, and the deficit falls, of course, on those parts of India to which the permanent settlement has not been applied. In these remarks there is no suggestion that the permanent settlement can now be altered. If the growing needs of the public are to be met and a fairer adjustment of burdens is to be made, it must be through the income tax.

§ 18. No excuse need be offered for giving these particulars in the course of a chapter dealing with revenue, for they

¹ A commissioner notes: 'It is not merely checking and revising the land records that brings officials into touch with the people, but the settlement of hundreds of thousands of agrarian disputes.

'For instance, the landlord or the tenant can sue to have his rent enhanced or abated, or a landlord sues to eject a tenant for certain specified reasons or sues him for arrears of rent and applies to evict him for non-payment; or the landlord or tenant applies for a loan from government for land improvement or agricultural purposes, or several landlords in a village cannot agree and apply to have their property partitioned, or one man sues another for his quota of revenue, or tenants fall out among themselves. The settlement of all these and many other disputes brings the revenue officer into close and intimate relations with the people.'

serve to illustrate the intimate relation between social conditions and the revenue system. That relation is nowhere more close than in India, and goes far towards justifying the use of the word 'revenue' to denote 'agrarian administration'.

§ 19. So far as one-fifth part of British India is concerned the opportunity presented by Indian conditions of realizing the Georgian principle has been definitely closed. But the evil results of the permanent settlement were slow to develop. Till far on in the nineteenth century, the experiment was regarded as a proved success; and in 1862 Sir Charles Wood ordered its application to India at large. So great were the difficulties encountered that these orders were delayed in execution. Meantime, the evil results of the system began to appear. The inherent inequity to the general taxpayer of alienating the unearned increment of rent began to be realized, and in 1883 the orders of Sir Charles Wood were definitely cancelled by Lord Ripon.

§ 20. Such was the history of the first attempts of British administration in Bengal to settle the land-revenues, and such were its consequences. When, however, in the earlier decades of the nineteenth century, the Company began to grapple with the same problem in other parts of India, it was then equipped with an able and experienced staff of administrators. The British administration was thus in a position to revive the best features of Akbar's system, and to add to it others which were a further improvement. Akbar had aimed at converting a share in the grain heap into a cash payment based on a share of the gross produce. The British Government adhered to the principle of collecting the revenue in cash instead of in kind, but based the assessment on a calculation of the 'net assets' or profits of cultivation; that is to say, the rent which a freeholder could obtain by letting the land. But these rents were not levied on improvements made by the owner or cultivator. The rent was, in fact, based upon what Americans call the prairie value of the land.

§ 21. In Madras Sir Thomas Munro developed the idea of surveying the districts, and also of dealing direct with the cultivators. In 1807 he converted the Directors to his views. The result was the system known as the raiyatwari settlement. The fields were surveyed, the soils classified, and the assessment determined in accordance with the size of the field and the value of the soil. The ruling prices of crops raised on the fields are also taken into account. It

§ 21. In Madras Sir Thomas Munro developed the idea of surveying the districts, and also of dealing direct with the cultivators. In 1807 he converted the Directors to his views. The result was the system known as the raiyatwari settlement. The fields were surveyed, the soils classified, and the assessment determined in accordance with the size of the field and the value of the soil. The ruling prices of crops raised on the fields are also taken into account. It

is in accordance with a rise in these prices that the valuations are revised at the periodic assessments. The revenue, which, as we shall see, is now only about 50 per cent. of the valuation, is collected from the cultivators themselves direct by the government officials.

§ 22. We may now examine in greater detail the development of the system in the United Provinces—the special subject of this inquiry, omitting any reference to the peculiar conditions of Oudh.¹

Generally speaking, the position of the zamindars was recognized as in Bengal. In villages where no zamindar could be found, the resident or more permanent cultivators were amalgamated under a system of joint-ownership. In the place of a zamindar a kind of corporation was established, and this system is now largely typical of Northern India. But the settlement was never made permanent as in Bengal, and was subject to revision from time to time, and that revision was based upon accurate surveys and records of rights. The following note from the hand of an expert will serve to show the manner in which these surveys were made :

In 1822 the first steps were taken towards securing a satisfactory record of rights in the land. The position of the hereditary collectors of the State demand (the zamindars, as they had come to be called) had by this time been recognized. The villages were surveyed, and the maps showed every field in every village, while each plot was numbered. A series of registers was prepared to link up with the map, and the name of the zamindar, and of every actual cultivator, with details of the plots in his holding, his rent and so forth, was recorded. These maps and registers form the basis of the now elaborate system of land records, and they are maintained on much the same lines in all the provinces of British India. In most provinces the maps and the registers forming the 'record of rights' are kept up to date by the patwaris (or similar officials under another name) under

¹ At this point it may be well to insert a word of warning extracted from a letter written on this study as a whole by an officer holding one of the most responsible positions in India : ' I have read with great interest your study No. 3 on the subject of land revenue. I have sent two copies of it to be examined from a technical point of view, and this note that I now write does not pretend to be critical on that score.

' I know you will forgive my saying, I think you argue too much from the particular to the general. That is to say, you give the impression to the reader who does not take careful note of your earlier paragraphs that what you say throughout, based admittedly largely upon the conditions in the United Provinces, is true of the whole of India. You guard yourself against this misconception here and there, but it will nevertheless prove a stumbling block for some people.'

is in accordance with a rise in these prices that the valuations are revised at the periodic assessments. The revenue, which, as we shall see, is now only about 50 per cent. of the valuation, is collected from the cultivators themselves direct by the government officials.

the general control of the officer in charge of the district (the Collector or Deputy Commissioner), and at intervals, generally (though not necessarily) when a revision of the land revenue assessment is contemplated, the maps and registers are also completely revised and overhauled.

The earliest assessments had been more or less continuations of the Mughal methods, and were based chiefly on such public accounts as were available ; but in any case they were estimates of the cash value of the share of the crops due to the State, and were revised at intervals of three to five years. In Upper India, however, hereditary zamindars were not always found, and in that case engagements to pay the revenue assessed were taken from the established cultivators in the village on joint responsibility, and such men in that way obtained a title similar to that of the zamindars.

At the present day communities of this sort contribute a large share of the land revenue.

In 1822, by the same Regulation which initiated the record of rights, the basis of the assessment was changed, an attempt being made to calculate the gross profits of cultivation by deducting the wages of labour and the interest on capital from the value of the crop, the revenue to be assessed at a fixed share of the gross profits. But this process not unnaturally proved too elaborate to be workable, and it was finally abandoned in 1833 in favour of a system which has endured in its main outlines until the present day. Instead of making estimates of crop and cost of cultivation, the valuation of the land is now made on a consideration of the rents actually paid by the cultivator (and recorded in the record of rights) to the zamindar. The process of assessment in its latest development under this system is briefly as follows. Similar villages are grouped in assessment 'circles', plots of similar soil in them are grouped in soil-classes, and *rent-rates* for each class of soil in each circle are deduced from the rents paid on a modern scale by substantial tenants. These rates are used for the valuation of unrented land, e.g. the fields held by the zamindars in their own cultivation or granted by them without rent (or at a favoured rate of rent) to relatives, family priests, village servants, and so forth. From the sum of the tenants' rents the valuation of unrented land, and the income from uncultivated products such as grass, reeds, and wild trees, or the fish in the lakes and streams, deductions are made by way of allowance for improvements effected at the zamindar's expense and for the exceptional costliness of the zamindar's own cultivation. (His social position usually prevents him from working with his own hands like the humbler tenant.) The result is the 'net assets' of which the fixed share, nominally half, formerly more, but in practice now less, is the land revenue assessed by the 'Settlement Officer'. The reassessment or settlement occurs now at intervals generally of thirty years.

Incidentally, during the last forty or fifty years the rent-rates

the general control of the officer in charge of the district (the Collector or Deputy Commissioner), and at intervals, generally (though not necessarily) when a revision of the land revenue assessment is contemplated, the maps and registers are also completely revised and overhauled.

The earliest assessments had been more or less continuations of the Mughal methods, and were based chiefly on such public accounts as were available; but in any case they were estimates of the cash value of the share of the crops due to the State, and were revised at intervals of three to five years. In Upper India, however, hereditary zamindars were not always found, and in that case engagements to pay the revenue assessed were taken from the established cultivators in the village on joint responsibility, and such men in that way obtained a title similar to that of the zamindars.

At the present day communities of this sort contribute a large share of the land revenue.

In 1822, by the same Regulation which initiated the record of rights, the basis of the assessment was changed, an attempt being made to calculate the gross profits of cultivation by deducting the wages of labour and the interest on capital from the value of the crop, the revenue to be assessed at a fixed share of the gross profits. But this process not unnaturally proved too elaborate to be workable, and it was finally abandoned in 1833 in favour of a system which has endured in its main outlines until the present day. Instead of making estimates of crop and cost of cultivation, the valuation of the land is now made on a consideration of the rents actually paid by the cultivator (and recorded in the record of rights) to the zamindar. The process of assessment in its latest development under this system is briefly as follows. Similar villages are grouped in assessment 'circles', plots of similar soil in them are grouped in soil-classes, and *rent-rates* for each class of soil in each circle are deduced from the rents paid on a modern scale by substantial tenants. These rates are used for the valuation of unrented land, e.g. the fields held by the zamindars in their own cultivation or granted by them without rent (or at a favoured rate of rent) to relatives, family priests, village servants, and so forth. From the sum of the tenants' rents the valuation of unrented land, and the income from uncultivated products such as grass, reeds, and wild trees, or the fish in the lakes and streams, deductions are made by way of allowance for improvements effected at the zamindar's expense and for the exceptional costliness of the zamindar's own cultivation. (His social position usually prevents him from working with his own hands like the humbler tenant.) The result is the 'net assets' of which the fixed share, nominally half, formerly more, but in practice now less, is the land revenue assessed by the 'Settlement Officer'. The reassessment or settlement occurs now at intervals generally of thirty years.

Incidentally, during the last forty or fifty years the rent-rates

adopted by the Settlement Officer have been used not only to value unrented fields, but also to enhance tenants' rents which are seriously inadequate when judged by modern standards. There are classes of tenants whose rents, owing to legal restrictions, cannot be easily enhanced, and there are some zamindars who are content not to attempt to enhance their tenants' rents between settlements, so that a considerable portion of the actual rents remain stagnant and do not respond to the increases in rental values which generally occur in the long intervals of thirty years. Such rents can be, and generally are, raised by the Settlement Officer, and while the increment of course goes in the first instance to the zamindar it is included in the 'net assets' and is thus partially secured to the State.

This account of modern methods only applies in full to those parts of the United Provinces which are not permanently settled. In the 'ryotwari' tracts (chiefly in the Madras and Bombay Presidencies) the actual cultivator and the owner are the same person, and there is little actual rent to guide the Settlement Officer. While, therefore, villages and soils are classified much in the same way as in the United Provinces, the assessment is determined by the direct application of a *revenue-rate*, which has to be fixed on theoretical considerations, such as the estimated yield of crops or a rise in prices or improvement in communications or irrigation effected at the expense of the State.

In permanently settled tracts the settlement dates from 1793 or shortly after, and of course is not liable to revision; but provision is usually made for revisions of the record of rights in them, and to some extent for fixing the cultivators' rents.

In the Punjab, where village communities in parts are much more common than zamindars, and mere tenants are few, the Settlement Officer has still partial recourse to produce estimates in order to determine a fair valuation of the assets.

§ 23. Over four-fifths of British India a periodic revision of assessments has been maintained, which enables some portion of the unearned increment to be recovered in relief of general taxation. The revision is usually effected once in a generation, that is to say, in thirty years. None the less a progressive departure from the principle of reserving the unearned increment to the state has been made. On the valuations current in the year 1812 Government decided to levy only 90 per cent., thus leaving a margin of 10 per cent. in favour of the person liable to government for the rent. Since 1812 the proportion of the 'net assets' taken by government has been steadily reduced. In 1822 it was lowered to 80 per cent., in 1832 to 72½ per cent., in 1849 to 66½ and in 1855 to 50 per cent. A discretion has now been given to provincial governments to fix the revenue at

adopted by the Settlement Officer have been used not only to value unrented fields, but also to enhance tenants' rents which are seriously inadequate when judged by modern standards. There are classes of tenants whose rents, owing to legal restrictions, cannot be easily enhanced, and there are some zamindars who are content not to attempt to enhance their tenants' rents between settlements, so that a considerable portion of the actual rents remain stagnant and do not respond to the increases in rental values which generally occur in the long intervals of thirty years. Such rents can be, and generally are, raised by the Settlement Officer, and while the increment of course goes in the first instance to the zamindar it is included in the 'net assets' and is thus partially secured to the State.

This account of modern methods only applies in full to those parts of the United Provinces which are not permanently settled. In the 'ryotwari' tracts (chiefly in the Madras and Bombay Presidencies) the actual cultivator and the owner are the same person, and there is little actual rent to guide the Settlement Officer. While, therefore, villages and soils are classified much in the same way as in the United Provinces, the assessment is determined by the direct application of a *revenue-rate*, which has to be fixed on theoretical considerations, such as the estimated yield of crops or a rise in prices or improvement in communications or irrigation effected at the expense of the State.

In permanently settled tracts the settlement dates from 1793 or shortly after, and of course is not liable to revision; but provision is usually made for revisions of the record of rights in them, and to some extent for fixing the cultivators' rents.

In the Punjab, where village communities in parts are much more common than zamindars, and mere tenants are few, the Settlement Officer has still partial recourse to produce estimates in order to determine a fair valuation of the assets.

§ 23. Over four-fifths of British India a periodic revision of assessments has been maintained, which enables some portion of the unearned increment to be recovered in relief of general taxation. The revision is usually effected once in a generation, that is to say, in thirty years. None the less a progressive departure from the principle of reserving the unearned increment to the state has been made. On the valuations current in the year 1812 Government decided to levy only 90 per cent., thus leaving a margin of 10 per cent. in favour of the person liable to government for the rent. Since 1812 the proportion of the 'net assets' taken by government has been steadily reduced. In 1822 it was lowered to 80 per cent., in 1832 to 72½ per cent., in 1840 to 66½ and in 1855 to 50 per cent. A discretion has now been given to provincial governments to fix the revenue at

from 55 to 45 per cent. of the valuations. In practice, the revenue is often assessed at a much lower figure.

§ 24. But this is not all. In recent years the value of agricultural produce has risen so rapidly that government has shrunk from making a corresponding increase in the assessments.

The reasons for this hesitation may be seen by taking an imaginary case. Let us take a property the rental of which was valued in the year 1880 at Rs. 400. Of this valuation 50 per cent., or Rs. 200, would be payable to government as revenue. That, and no more, would continue to be payable till 1910, when the land came up once more for revaluation.

In the meantime the value of rents might have risen to Rs. 1,000 and might have been realized by the zamindar raising his rents against the cultivator. Thus, in 1910, the zamindar would be realizing Rs. 1,000, out of which Rs. 200 only would be due to government, leaving him a net income of Rs. 800. In 1910 his land would be revalued at Rs. 1,000, of which 50 per cent., or Rs. 500, would be due to government. His private income would thus at one stroke be reduced from Rs. 800 to Rs. 500, or by $37\frac{1}{2}$ per cent., and the enhancement of revenue would be Rs. 300, or 150 per cent.

The Revenue Department of the Government of India has therefore instructed the provincial government that, without their special sanction, no revision of assessments shall have the effect of raising the aggregate revenue of a district by more than $33\frac{1}{3}$ per cent.

§ 25. As to the manner in which effect is given to these instructions there is some conflict of evidence. Some officers hold that they are ordered to write down the valuation to a figure which will avoid an increase of the revenue assessment by more than $33\frac{1}{3}$ per cent. Others maintain that there is no tampering with valuations, but the result is secured by reducing the proportion of them taken as revenue. To take the example quoted, one school maintain that the valuation is written down from Rs. 1,000 to Rs. 900. The zamindar would thus have to pay only Rs. 450 to government; but as he is really deriving Rs. 1,000, not Rs. 900, from the rents, he would retain a private income of Rs. 550. This is a less crushing reduction of his income than if the full admissible half assessment had been taken. The other school declare that the result is really arrived at by maintaining the figure at the real valuation indicated by the rents, namely Rs. 1,000, and reducing the share taken as

from 55 to 45 per cent. of the valuations. In practice, the revenue is often assessed at a much lower figure.

§ 24. But this is not all. In recent years the value of agricultural produce has risen so rapidly that government has shrunk from making a corresponding increase in the assessments.

The reasons for this hesitation may be seen by taking an imaginary case. Let us take a property the rental of which was valued in the year 1880 at Rs. 400. Of this valuation 50 per cent., or Rs. 200, would be payable to government as revenue. That, and no more, would continue to be payable till 1910, when the land came up once more for revaluation.

In the meantime the value of rents might have risen to Rs. 1,000 and might have been realized by the zamindar raising his rents against the cultivator. Thus, in 1910, the zamindar would be realizing Rs. 1,000, out of which Rs. 200 only would be due to government, leaving him a net income of Rs. 800. In 1910 his land would be revalued at Rs. 1,000, of which 50 per cent., or Rs. 500, would be due to government. His private income would thus at one stroke be reduced from Rs. 800 to Rs. 500, or by $37\frac{1}{2}$ per cent., and the enhancement of revenue would be Rs. 300, or 150 per cent.

The Revenue Department of the Government of India has therefore instructed the provincial government that, without their special sanction, no revision of assessments shall have the effect of raising the aggregate revenue of a district by more than $33\frac{1}{3}$ per cent.

§ 25. As to the manner in which effect is given to these instructions there is some conflict of evidence. Some officers hold that they are ordered to write down the valuation to a figure which will avoid an increase of the revenue assessment by more than $33\frac{1}{3}$ per cent. Others maintain that there is no tampering with valuations, but the result is secured by reducing the proportion of them taken as revenue. To take the example quoted, one school maintain that the valuation is written down from Rs. 1,000 to Rs. 900. The zamindar would thus have to pay only Rs. 450 to government; but as he is really deriving Rs. 1,000, not Rs. 900, from the rents, he would retain a private income of Rs. 550. This is a less crushing reduction of his income than if the full admissible half assessment had been taken. The other school declare that the result is really arrived at by maintaining the figure at the real valuation indicated by the rents, namely Rs. 1,000, and reducing the share taken as

revenue from 50 to 45 per cent. He would thus pay Rs. 450 in revenue and retain Rs. 550 as his private income.

The precise method, however, by which these reductions of revenue are made is immaterial. The fact that in many cases they have been reduced to 45 per cent. or even lower, is not in dispute.¹

In addition to revenue taken by government in the United Provinces is a cess equal to an additional 10 per cent. on the revenue collected. This cess, however, is merely a consolidation of a number of extras levied for local purposes, and is devoted to such purposes exclusively. This percentage is added to the revenue and collected at the same time.

§ 26. The most striking departure from Georgian principles, however, has been made in the cases where land in the neighbourhood of growing towns has been diverted from cultivation to be used as sites for houses, factories, or shops. It is in these very cases that the fact of unearned increment is least in question. The moment that agricultural land comes within reach of a growing town, the rents obtainable increase by leaps and bounds. Here it is quite beyond dispute that the increment of values is not due to the efforts of the owner or cultivator.

Land when so diverted from cultivation to more profitable uses seems to have been treated in different ways. Some revenue authorities have kept the land on the records, and have assessed it for revenue at the highest agricultural rates ruling in the neighbourhood. Others have taken the view that land revenue is simply a tax on tillage, so that, when land ceases to be used for agricultural purposes, it ceases to be liable to land tax at all. The fortunate owner has thus been exempted from land taxation at the moment when his rents are increasing by many hundreds per cent.

An actual example may be cited. A large cotton concern required a field in the neighbourhood of a certain town in the United Provinces as a site for a ginning factory. The field was assessed for taxation at Rs. 5. It was leased from the owner at an annual rent of Rs. 300 and the factory was erected. These were the facts with which the settlement officer had to deal. In accordance with recognized practice, he should have removed the land from his roll, on the ground that, as it was no longer subject to cultivation, it ceased to be subject to the land tax. He availed himself, however, of the fact that it was technically outside the municipal

¹ For opinions of experts on this and other points raised in these pages see Appendix A to this study, p. 276.

limits, and kept it on his roll at a rental of Rs. 20, the highest in the neighbourhood paid on any class of agricultural land. But had the field been within the municipal area, it would then and there have vanished from the roll and have ceased to be liable for the land tax.¹

§ 27. It is not uninstrusive to trace the process which has led to these startling results. The Mughal Empire claimed the ultimate ownership in land. In virtue of that right it conceded the cultivator no more than the means of bare subsistence. All that was over and above that margin was claimed by the state, and for practical purposes the rent due to the state was fixed at one-third or one-quarter of the gross produce.

The British administration claimed to inherit these rights. The basis upon which the rent was fixed was changed from one-third or one-quarter of the gross produce to the annual rent obtainable in the open market. The share of this rent to be paid as revenue was first fixed at 90 per cent., and then reduced by successive stages to 45 per cent. In the meantime the custom developed of calling it a tax. The revenues from land may be described as a rent which government has drifted into treating as a tax on agriculture.² On the other hand two features have been preserved

¹ The facts recited in this paragraph were taken down from the lips of an experienced settlement officer, to whom this point was afterwards sent for criticism. That a certain variety of practice may exist is shown by the following note made by a collector: 'I had certainly always thought that ground-rents were deemed part of the assets and assessable for Land Revenue in the ordinary fashion. I have certainly acted on that assumption without such action being objected to.'

The following note from a commissioner, however, inclines me to think that the collector who wrote this last note was thinking of sites in villages and small rural towns, and not of towns where modern factories have sprung up, of which there are already examples in the United Provinces: 'The probable reason that in the United Provinces no land revenue has been taken for land not used for agriculture is that there is so little of it except in a few towns.'

'In the villages practically all the land covered by houses is used for dwellings for agriculturalists or for labourers, artisans, or others whose residence is necessarily for agricultural purposes. In the comparatively few towns where a charge might justifiably be levied the dissatisfaction and trouble that would be caused by levying direct taxation from a large number of smallholders not held together by any communal responsibility for payment has been a strong argument for not introducing innovations.' (See also Appendix A to this study.)

² A commissioner notes: 'It is not a tax on agriculture, because, theoretically, it can have no effect on rent. The actual cultivating tenant would pay the same rent as he does if the land revenue were remitted.'

If the landlord, and not government, is regarded as the proprietor, it

limits, and kept it on his roll at a rental of Rs. 20, the highest in the neighbourhood paid on any class of agricultural land. But had the field been within the municipal area, it would then and there have vanished from the roll and have ceased to be liable for the land tax.¹

which seem clearly to mark the land revenues as being of the nature of a rent rather than of a tax.

The proportion of net assets, to be taken by government as revenue, is not determined by statute, nor even discussed in the legislature. The successive reductions from 90 to less than 50 per cent. have been ordered by the Government of India in its executive capacity. Under British institutions a tax is an impost levied in accordance with a statute, in terms of which the amount leviable can be settled to the uttermost farthing in the law courts. If government desire to exact 100 per cent. of the net assets no law court could intervene.

The assessment made by the settlement officer is presented to the person liable for the revenue, whether zamindar or raiyat, in the form of a bargain. He may take it or leave it, and if he elects to reject the assessment proposed, his rights are passed to another, and the previous holder is compensated out of the proceeds. His tenure is thus distinctly of the nature of a tenant right.

The system, taken as a whole, is thus characteristic of a rent rather than of a tax. The highest authorities on the subject are disposed to treat the distinction between a rent and a tax as purely academic. But the two things are vitally different, in the East as well as in the West. While persistently handling the revenues as a rent, government has drifted into thinking of them as a tax on tillage. The natural result has been that when land ceased to be used for agriculture, it ceased to be charged for revenue. Land which had suddenly acquired colossal values as urban property was thus at the next assessment freed from liability for the payment of any rent to the state in virtue of its position as ultimate owner. The policy is defended on the ground that urban and industrial rents are now subject to income tax. But income tax is a mere fraction of the rental created when land is diverted from tillage to building sites. The highest income tax (apart from super-tax) now leviable is 1 anna in the rupee, or $6\frac{1}{2}$ per cent., and was until recently 5 pies in the rupee, or about $2\frac{1}{2}$ per cent.

§ 28. If, by means of increased tariffs, by the investment of capital encouraged by the state, and by the construction of railways and roads, a rapid industrial development is

is a tax on landlords' profits not very dissimilar to income tax on profits from sources other than agriculture. After all it does not much matter. A rupee taken from the landlord is a rupee less for him to spend, whether it is called rent or tax.'

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for ensuring the integrity of the financial data and for facilitating the audit process. The document also outlines the specific requirements for record-keeping, including the need to maintain separate records for each transaction and to ensure that all records are properly indexed and filed.

The second part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for ensuring the integrity of the financial data and for facilitating the audit process. to be fostered and great towns are called into existence, the public claim to the increment created on industrial and urban sites is of growing importance. It is a fund which can properly be reserved for meeting the expenses of town-planning, for providing open spaces, and generally preventing the growth of slum conditions which have fastened like ulcers on modern civilization. If industrial development on a large scale is to mean the growth of such conditions in India, the task of maintaining order under any system of government may well be rendered impossible. Slum conditions are easy to prevent, but almost impossible to cure. The enormous increase in the value of land at the moment when it is diverted from agricultural to industrial and urban uses provides the funds for preventing the growth of future hotbeds of vice and disease just when they are most needed. The recent expansion of cities in India, and its effect on adjacent land values, is leading government to give the subject its serious consideration.

§ 29. The manner in which the income tax is levied is a further example of the results of treating a rent as a tax. Theoretically a tax on income is the soundest of all taxes. In practice the chief objection to it arises from the difficulty of ascertaining the income of large classes of taxpayers, and nowhere is this difficulty greater than in India. It is, indeed, notorious that business men are often in the habit of keeping two sets of books, one secret, reflecting the real extent of their transactions, and another for the benefit of the revenue officers. On the incomes derived from agricultural land evasion is more difficult, because they are the subject of records in the hands of government; and yet these incomes were selected for total exemption from the income tax, on the ground that the land was taxed already. In fact, such incomes¹ consisted of commission paid by the state to individuals for administering the land and for collecting or realizing the rents. A reduction in the commission granted might have been alleged as a reason for exemption from income tax. But in fact the commission has been largely and steadily increased. In 1907 it was calculated that throughout British India government was taking no more than 50 per cent. of the net assets, or 5½ per cent. of the gross produce.² It must now be taking

¹ i. e. the incomes of the landlords. The income of the tenant cultivator is not even a commission; but of course the number of tenants whose income would be over the income-tax minimum is relatively small.

² *Imperial Gazetteer*, vol. iv, p. 216.

considerably less, and it is not in question that in Native States a much higher proportion is collected by the rulers. From the following table, published in 1907, the effect of these reductions on the general taxpayer is apparent.

<i>Proportion borne by the land revenue to :</i>	<i>1870. Per cent.</i>	<i>1880. Per cent.</i>	<i>1890. Per cent.</i>	<i>1900. Per cent.</i>
The gross income of the state .	39.0	29.5	28.0	23.2
Taxation proper	43.9	41.6	40.8	38.6

§ 30. As a larger proportion of the unearned increment from land is abandoned to individuals, so is a larger proportion of the public expenses transferred to the shoulders of the general taxpayer. The individuals who profit by the increment abandoned by the state belong to different classes in different parts of India. In Northern India, as in Bengal, government has largely recognized the claims of the taluqdars and zamindars to an interest in collecting the rents. Recognition of this class, as the persons to whom government looks for the payment of land revenue, has practically established their position as landlords, subject to periodic revision of the amounts due from them to the government. The re-valuation of the land every thirty years has operated against such an increase of subinfeudations as developed under the permanent settlement. But clearly an increasing proportion of the rent has been abandoned in favour of the zamindars. In 1812 a commission of 10 per cent. was considered sufficient to compensate zamindars for the cost of collection. This commission has now been raised to about 50 per cent. of a much larger valuation. It is obvious, therefore, that the bulk of this increment accrues to the benefit of the zamindars. In the parts of India where raiyatwari obtains it must have gone to the cultivators.

§ 31. Wherever the zamindars have been recognized, attempts have been made to protect the interests of cultivators by tenancy laws, and, as in Bengal, these laws have led to an ever-increasing volume of litigation. The smallest cases are heard by assistant collectors of the second class, larger cases by assistant collectors of the first class; appeals from the former go to the collector, and from the latter to the commissioner or, finally, to the Board of Revenue, if points of law are involved; others to the district judge and on second appeal to the High Court. Broadly speaking, all appeals which involve a question of proprietary right or of jurisdiction go to the Civil Court and not to the commissioner; so do all appeals in suits for arrears of rent

considerably less, and it is not in question that in Native States a much higher proportion is collected by the rulers. From the following table, published in 1907, the effect of these reductions on the general taxpayer is apparent.

<i>Proportion borne by the land revenue to :</i>	<i>1870. Per cent.</i>	<i>1880. Per cent.</i>	<i>1890. Per cent.</i>	<i>1900. Per cent.</i>
The gross income of the state .	39.0	29.5	28.0	23.2
Taxation proper	43.9	41.6	40.8	38.6

§ 30. As a larger proportion of the unearned increment from land is abandoned to individuals, so is a larger proportion of the public expenses transferred to the shoulders of the general taxpayer. The individuals who profit by the increment abandoned by the state belong to different classes in different parts of India. In Northern India, as in Bengal, government has largely recognized the claims of the taluqdars and zamindars to an interest in collecting the rents. Recognition of this class, as the persons to whom government looks for the payment of land revenue, has practically established their position as landlords, subject to periodic revision of the amounts due from them to the government. The re-valuation of the land every thirty years has operated against such an increase of subinfeudations as developed under the permanent settlement. But clearly an increasing proportion of the rent has been abandoned in favour of the zamindars. In 1812 a commission of 10 per cent. was considered sufficient to compensate zamindars for the cost of collection. This commission has now been raised to about 50 per cent. of a much larger valuation. It is obvious, therefore, that the bulk of this increment accrues to the benefit of the zamindars. In the parts of India where raiyatwari obtains it must have gone to the cultivators.

§ 31. Wherever the zamindars have been recognized, attempts have been made to protect the interests of cultivators by tenancy laws, and, as in Bengal, these laws have led to an ever-increasing volume of litigation. The smallest cases are heard by assistant collectors of the second class, larger cases by assistant collectors of the first class; appeals from the former go to the collector, and from the latter to the commissioner or, finally, to the Board of Revenue, if points of law are involved; others to the district judge and on second appeal to the High Court. Broadly speaking, all appeals which involve a question of proprietary right or of jurisdiction go to the Civil Court and not to the commissioner; so do all appeals in suits for arrears of rent

amounting to over Rs. 100.¹ With all these appeals it is difficult, with the best of intentions, to eliminate the advantage of wealthier suitors who can afford to carry their cases from court to court.² None the less zamindars as a class would prefer a more summary system which ensured final decisions at the initial stage.³ A steady growth in the number of lawyers is a necessary result of the present system.⁴

§ 32. The practice of recognizing the claims of the hereditary tax collector and administrator of the land, and of placing him in the position of a landlord, has prevailed in Bengal and in Northern India. In these parts of India the zamindari system is the rule, though in Northern India the zamindar is usually subject to a periodic revision and enhancement of the revenue due from him to the state. All this was done with the deliberate intention of creating a landed gentry disposed to maintain the existing order and competent to aid in doing so by reason of the influence which each of them wielded amongst his own tenants.

§ 33. It must not be inferred from anything said in the foregoing pages that this policy is regarded as a mistake, apart from the permanent settlement in Bengal. The economic results of the policy have been traced. They are

¹ A collector notes: 'It should, I think, be made quite clear that the system here referred to is that of the United Provinces. In Bengal all such cases are dealt with wholly by the Civil Courts, and the collector and his subordinates and the commissioner have, I believe, no concern whatever with them. This is another difference in system which divorces the ordinary district official from the people in Bengal. (The same remarks apply to Behar.)'

² The same collector notes: 'These remarks are very true. The result is most emphatically one law for the rich and another for the poor.'

'There is also increasing tension between landlord and tenant. Far too many landlords are absolute absentees, leaving the management of their estates to agents, who are frequently far from honest, cheating their masters and swindling and tyrannizing over the tenants. Some day there will be a "jacquerie".'

³ A senior member of the I.C.S. notes: 'The tenants as well as the zamindars would prefer more summary methods. Their illiteracy, which is greater than that of the zamindars in proportion, makes them a constant prey to the technicalities of a tenancy law, of which legal practitioners, with no established code of honour to restrain them, make the most in their own selfish interests.'

'Our tenancy law is in an unsatisfactory condition, but really pressing questions of its amendment have to take a back seat when fuss about home rule and such-like nebulous and frothy politics is the order of the day.'

⁴ A senior officer notes: 'In fact, in the United Provinces quite a *small proportion* of appealable orders in such cases are actually appealed. The numbers look large because the population and the districts are many.'

the fact that the *Journal* was a "newspaper" and not a "journal" in the sense of a scholarly journal. The *Journal* was a "newspaper" in the sense that it was a daily publication that contained news, commentary, and other information of interest to the public. It was not a "journal" in the sense that it was a scholarly publication that contained research and analysis on a specific topic.

facts which have to be weighed, but economic considerations have often to be overruled by political reasons, a thing which economists are prone to forget. In any case there can now be no more question of disturbing the present rights of the zamindars than of going back on the permanent settlements, wherever they were made.¹

§ 34. As noticed above it was due to the personal influence of Sir Thomas Munro that the opposite policy was followed in Madras. Wherever possible the claims of the zamindars were set aside, and the revenue was collected direct from the cultivator or raiyat by government officials. The result is that 47 per cent. of the land revenue of India is now raised from districts in which the raiyatwari system prevails. In these districts it is the cultivator himself who benefits from the gradual reduction in the proportion of the rent taken by government to 45 per cent. Where 55 per cent. of the economic rent is left to the cultivators it would clearly be possible for many of them to sublet and to live on the rents. Under these circumstances the raiyat would become a landlord. The right to sublet, however, is subject to government sanction and is carefully controlled.² In the raiyatwari districts there is, therefore, no need for land laws regulating rents and relations of landlords and tenants. A mass of litigation, and a consequent growth of the legal profession, is avoided. The raiyatwari system prevails in Madras, Bombay, Assam, and Burma.

§ 35. The method of collecting the land revenue remains to be noticed. In the permanently settled districts of Bengal the zamindar must pay the revenue due to government into its treasury by sunset on a certain day, failing which his rights are exposed for public sale.

Elsewhere the revenue is generally payable in instalments after each crop is reaped, according to local conditions. The tahsildar is usually the officer who actually receives the cash.

¹ An Indian critic notes : ' In an agricultural country like India, if the landed gentry had not been created the natives would have remained non-progressive.'

² I have since heard that in Madras raiyatwari tenures are freely purchased by mere investors who sublet them to the actual cultivators. I have not been able to investigate the matter at close quarters ; but in so far as this practice has been permitted, the raiyatwari system has clearly developed into a zamindari system in a disguised form. The disguise might be a danger if it tended to prevent the protection of the tenant by law, as in other parts of India where the zamindari system is recognized.

Where payments are in default, recovery is effected by attaching the movables of the defaulter, or the land in respect of which the revenue is due, or other land belonging to the defaulter, or, in some cases, by arrest. The issue of the writ of attachment is usually effective at once.¹

§ 36. Where crops have failed, the revenue is suspended or even remitted. From 1899 to 1902, when famine prevailed, revenue to the value of £1,289,812 was suspended, of which £1,238,937 was finally remitted. In the famines which followed 1902, though less severe, much larger sums were remitted.

§ 37. From the foregoing sketch it appears that the agricultural produce of land is the main source of revenue in India, and the government has steadily reduced the demands made on it. As the value of produce has grown, government has confined itself to taking a smaller and smaller proportion. The result is that, despite the fact that the average wealth of the people of India per head is extremely low, the proportion of that wealth diverted for public purposes is even lower.²

§ 38. Mr. Jack has conclusively shown that, in comparison with Italy or Japan, the inhabitant of Bengal contributes an exceedingly small proportion of his substance to the general revenue. In Madras a similar result has been reached by Mr. Galetti.³ His conclusions are so important that it is well to quote in full the data upon which they are based.

It is only when we take small similar local units, and eliminate disturbing factors as far as possible and apply practical detailed

¹ A senior officer notes: 'In the United Provinces it is commonly sufficient to issue a writ of demand, or at the most a summons to appear before the tahsildar. Arrest and attachment of movables are comparatively seldom resorted to, and severer processes are hardly ever required.'

A commissioner also notes: 'The first thing usually is to serve the defaulter with a reminder that the demand is overdue, for which he is charged a shilling, or else he can be served with a citation to appear and pay or explain why he has not paid. Moreover, all the proprietors in a "matal" are jointly and severally responsible, and ordinarily the revenue is realized in a lump sum from the "lambardar", or representative of the proprietors, who realizes from them their quota. If they do not pay him he can proceed against them by suit in the revenue courts.'

² An Indian critic notes: 'Is not the proportion of wealth diverted for public purposes to be lower of necessity if the wealth of the people is extremely low, in order to leave a margin for their subsistence?'

³ *More Truths about India*, issued by the East India Association, 1913-14, p. 65.

[illegible]

Abstract

100

knowledge and experience, that comparisons between taxation in such distant and different countries can be really illuminating. I will compare the taxation in a single village in the Krishna District with that in a single village in Italy which I know well, and I promise striking results. My figures are official in each case.

Konatalapalli is a typical upland village in a backward portion of the Krishna District. It has a population of 1,300, and an area of 2,700 acres, of which 2,500 are comprised in holdings. It grows millet on about 1,000 acres, cotton on about 400, pulses on 200 or 300. There are also a few paddy fields. Castor-oil and chillies are grown on small areas. There are some fruit and liquor trees. The population comprises, besides the agriculturists, only the usual village artisans, a few weavers, and a few persons connected with the liquor trade.

Torre San Patrizio is a typical upland village in a backward portion of Italy. It has the same population as Konatalapalli, 1,300. The area comprised in holdings is somewhat less, 2,000 acres against 2,500. It grows maize and wheat. Konatalapalli eats its millet and sells its cotton. Torre San Patrizio eats its maize and sells its wheat. Konatalapalli has its oil seeds; Torre San Patrizio its oil-fruit on the olive-trees. Konatalapalli has a few liquor trees, but not many; Torre San Patrizio has a few liquor shrubs (vines), but not many. Pulses are grown as secondary crops in both villages. The population of Torre San Patrizio is all agricultural. There are the usual village artisans. There are no rich proprietors. There are not even weavers as a class apart, but in a few ryots' houses the women work at the loom in the winter. The people of Torre San Patrizio are vegetarians, not from choice but from necessity. They cannot afford to eat meat, nor even eggs. They sell their eggs and their fowls. They cannot afford to eat wheat bread, but eat maize porridge and maize bread, vegetables, and fruit, and what the cow produces.

The soil of Konatalapalli is black regar clay, which grows good crops of millet and cotton. The soil of Torre San Patrizio is light-coloured clay, which grows fair maize and good fodder crops but very poor wheat and vines.

I shall now draw a comparison between the taxation paid by the peasants of Torre San Patrizio and the ryots of Konatalapalli.

The government land revenue is nearly the same in the two villages. It is just over Rs. 3,000 at Konatalapalli, and 4,568 francs = Rs. 2,741 at Torre San Patrizio.

But when we come to local taxation on land the difference is enormous. It is law in Italy that village panchayats shall not add cesses for their own purposes to government direct taxes until they have exhausted every other source of taxation. But Torre San Patrizio has only, apart from akbari, land, houses, and cattle to tax. It therefore taxes these, what corresponds with akbari being entirely insufficient.

knowledge and experience, that comparisons between taxation in such distant and different countries can be really illuminating. I will compare the taxation in a single village in the Krishna District with that in a single village in Italy which I know well, and I promise striking results. My figures are official in each case.

Konatalapalli is a typical upland village in a backward portion of the Krishna District. It has a population of 1,300, and an area of 2,700 acres, of which 2,500 are comprised in holdings. It grows millet on about 1,000 acres, cotton on about 400, pulses on 200 or 300. There are also a few paddy fields. Castor-oil and chillies are grown on small areas. There are some fruit and liquor trees. The population comprises, besides the agriculturists, only the usual village artisans, a few weavers, and a few persons connected with the liquor trade.

There are not even weavers as a class apart, but in a few ryots' houses the women work at the loom in the winter. The people of Torre San Patrizio are vegetarians, not from choice but from necessity. They cannot afford to eat meat, nor even eggs. They sell their eggs and their fowls. They cannot afford to eat wheat bread, but eat maize porridge and maize bread, vegetables, and fruit, and what the cow produces.

The soil of Konatalapalli is black regar clay, which grows good crops of millet and cotton. The soil of Torre San Patrizio is light-coloured clay, which grows fair maize and good fodder crops but very poor wheat and vines.

I shall now draw a comparison between the taxation paid by the peasants of Torre San Patrizio and the ryots of Konatalapalli.

The government land revenue is nearly the same in the two villages. It is just over Rs. 3,000 at Konatalapalli, and 4,568 francs = Rs. 2,741 at Torre San Patrizio.

But when we come to local taxation on land the difference is enormous. It is law in Italy that village panchayats shall not add cesses for their own purposes to government direct taxes until they have exhausted every other source of taxation. But Torre San Patrizio has only, apart from akbari, land, houses, and cattle to tax. It therefore taxes these, what corresponds with akbari being entirely insufficient.

Konatalapalli pays Rs. 250 local cess. Torre San Patrizio pays 1,707 francs = Rs. 1,024 to the Taluk Board, and besides this 6,337 francs = Rs. 3,803 to the village panchayat, or a total of nearly Rs. 5,000 cess on the government land revenue of Rs. 2,741.

Nor is this all. For the cess is only one of the taxes extracted by the Torre San Patrizio village panchayat from the ryot. The total revenue of the panchayat is Rs. 9,000, or more than three times the Government land revenue of the village.

The revenue of the Torre San Patrizio panchayat is made up as follows :

CESSES				Rs.
Cess on government land tax	.	.	.	3,803
Cess on government house tax	.	.	.	329
TAXES				
Cattle	.	.	.	2,671
Family or hearth tax	.	.	.	831
Octroi (chiefly on wine)	.	.	.	706
PROFITS				
Profits on communal land, houses, oilpress, cemetery, oven licence tax	.	.	.	429
CONTRIBUTIONS				
From government for schools	.	.	.	159
From Taluk Board for schools	.	.	.	79
				Rs. 9,007

The cesses, the cattle tax, and the hearth tax, amounting to Rs. 7,634, come straight out of the pockets of the ryots, and are a burden on the land the ryots till, the cattle with which they till it, and the houses they live in. Besides this Rs. 7,634, they have to pay Rs. 2,741 land revenue and Rs. 237 house tax to Government, and Rs. 1,024 land cess and Rs. 106 house cess to the Taluk Board. The land, cattle, and village site of Torre San Patrizio thus bear a burden of Rs. 11,854, while the land, cattle, and village site of Konatalapalli bear a burden of little over Rs. 3,000. Nothing is levied on Konatalapalli cattle, there being no government forest reserve in the neighbourhood.

I reckon the gross agricultural income of Torre San Patrizio at Rs. 90,000. This figure is based upon researches extending over twenty years, and is very accurate. For Konatalapalli I cannot make so accurate an estimate. But the village officers tell me the crop on an acre of cotton is sold at about Rs. 40, and that on an acre of cholum at about Rs. 30. These two products alone, grown on about 400 and 1,000 acres respectively, yield Rs. 46,000 a year gross. Then there are hundreds of acres of pulses and other products, including fifty of wet paddy, and I must also reckon in the milk and other products of the cows and buffaloes, and the profit on

Konatalapalli pays Rs. 250 local cess. Torre San Patrizio pays 1,707 francs = Rs. 1,024 to the Taluk Board, and besides this 6,337 francs = Rs. 3,803 to the village panchayat, or a total of nearly Rs. 5,000 cess on the government land revenue of Rs. 2,741.

Nor is this all. For the cess is only one of the taxes extracted by the Torre San Patrizio village panchayat from the ryot. The total revenue of the panchayat is Rs. 9,000, or more than three times the Government land revenue of the village.

The revenue of the Torre San Patrizio panchayat is made up as follows :

				<hr/> Rs. 9,007

The cesses, the cattle tax, and the hearth tax, amounting to Rs. 7,634, come straight out of the pockets of the ryots, and are a burden on the land the ryots till, the cattle with which they till it, and the houses they live in. Besides this Rs. 7,634, they have to pay Rs. 2,741 land revenue and Rs. 237 house tax to Government, and Rs. 1,024 land cess and Rs. 106 house cess to the Taluk Board. The land, cattle, and village site of Torre San Patrizio thus bear a burden of Rs. 11,854, while the land, cattle, and village site of Konatalapalli bear a burden of little over Rs. 3,000. Nothing is levied on Konatalapalli cattle, there being no government forest reserve in the neighbourhood.

I reckon the gross agricultural income of Torre San Patrizio at Rs. 90,000. This figure is based upon researches extending over twenty years, and is very accurate. For Konatalapalli I cannot make so accurate an estimate. But the village officers tell me the crop on an acre of cotton is sold at about Rs. 40, and that on an acre of cholum at about Rs. 30. These two products alone, grown on about 400 and 1,000 acres respectively, yield Rs. 46,000 a year gross. Then there are hundreds of acres of pulses and other products, including fifty of wet paddy, and I must also reckon in the milk and other products of the cows and buffaloes, and the profit on

cattle-rearing (for I have included these and many other items in my estimate for Torre San Patrizio), and I do not think a lower estimate than Rs. 70,000 could be made for the total gross agricultural income of Konatalapalli.

The land at Konatalapalli is selling at Rs. 150 to Rs. 200 an acre. The average at Torre San Patrizio is about Rs. 350 an acre. There are about 2,500 acres at Konatalapalli, 2,000 at Torre San Patrizio. The market value of the land at Torre San Patrizio may therefore be put at 7 lakhs against about Rs. 4,37,500 at Konatalapalli. But it must be remembered that the rate of interest is lower in Europe, and land at Torre San Patrizio is sold at a higher number of years' purchase than in the backward Nandigama Taluk of the Krishna District.

The number of years' purchase reckoned at Torre San Patrizio is about twenty-five, the sum reckoned as net income being taken to be what is derived by a resident owner who is not the actual cultivator, but gives the land out on the half-sharing system to actual cultivators. The net income corresponding with Rs. 350 per acre market value is Rs. 14 per acre. The taxation is Rs. 6 per acre. Therefore public bodies take Rs. 6 out of every Rs. 20 net income.

This estimate of Rs. 14 per acre is strikingly confirmed by an examination of private accounts of thirty years. The figures worked out to almost exactly Rs. 14 per acre.

Accordingly the net agricultural income of the 2,000 acres at Torre San Patrizio may be put at Rs. 40,000, of which Rs. 12,000 is taken by public bodies, and Rs. 28,000 or about Rs. 22 per head of population left to the ryots; the figure for gross income being Rs. 70 per head.

At Konatalapalli twenty years is the limit of the number of years' purchase that can be taken. On the same principle the net income of Konatalapalli is Rs. 8-12 per acre against Rs. 14 per acre at Torre San Patrizio; the total for the 2,500 acres is just under Rs. 22,000 against Rs. 28,000; taxation takes Rs. 3,000 out of Rs. 25,000 against Rs. 12,000 out of Rs. 40,000; the net income per head of population, after paying taxes, is Rs. 17 against Rs. 22; the gross income per head is Rs. 55 against Rs. 70.

The net income is something of a fiction in the case of populations composed chiefly of peasant proprietors. The gross income is perhaps a better test of relative taxable capacity. But it must be pointed out that neither gross nor net income per head is a fair test until allowance is made for difference in cost of living. I should say this difference would cover the whole excess of Rs. 15 gross income which the Torre San Patrizio peasant apparently enjoys. For I should say that the more costly dwellings and clothes and cattle shelters necessitated by the European climate cost the Italian peasant at least the difference, Rs. 15 per head per annum. The Konatalapalli ryot probably has more to spend on luxuries after providing for food, clothing, and shelter. He certainly does spend

cattle-rearing (for I have included these and many other items in my estimate for Torre San Patrizio), and I do not think a lower estimate than Rs. 70,000 could be made for the total gross agricultural income of Konatalapalli.

The land at Konatalapalli is selling at Rs. 150 to Rs. 200 an acre. The average at Torre San Patrizio is about Rs. 350 an acre. There are about 2,500 acres at Konatalapalli, 2,000 at Torre San Patrizio. The market value of the land at Torre San Patrizio may therefore be put at 7 lakhs against about Rs. 4,37,500 at Konatalapalli. But it must be remembered that the rate of interest is lower in Europe, and land at Torre San Patrizio is sold at a higher number of years' purchase than in the backward Nandigama Taluk of the Krishna District.

The number of years' purchase reckoned at Torre San Patrizio is about twenty-five, the sum reckoned as net income being taken to be what is derived by a resident owner who is not the actual cultivator, but gives the land out on the half-sharing system to actual cultivators. The net income corresponding with Rs. 350 per acre market value is Rs. 14 per acre. The taxation is Rs. 6 per acre. Therefore public bodies take Rs. 6 out of every Rs. 20 net income.

This estimate of Rs. 14 per acre is strikingly confirmed by an examination of private accounts of thirty years. The figures worked out to almost exactly Rs. 14 per acre.

Accordingly the net agricultural income of the 2,000 acres at Torre San Patrizio may be put at Rs. 40,000, of which Rs. 12,000 is taken by public bodies, and Rs. 28,000 or about Rs. 22 per head of population left to the ryots; the figure for gross income being Rs. 70 per head.

At Konatalapalli twenty years is the limit of the number of years' purchase that can be taken. On the same principle the net income of Konatalapalli is Rs. 8-12 per acre against Rs. 14 per acre at Torre San Patrizio; the total for the 2,500 acres is just under Rs. 22,000 against Rs. 28,000; taxation takes Rs. 3,000 out of Rs. 25,000 against Rs. 12,000 out of Rs. 40,000; the net income per head of population, after paying taxes, is Rs. 17 against Rs. 22; the gross income per head is Rs. 55 against Rs. 70.

The net income is something of a fiction in the case of populations composed chiefly of peasant proprietors. The gross income is perhaps a better test of relative taxable capacity. But it must be pointed out that neither gross nor net income per head is a fair test until allowance is made for difference in cost of living. I should say this difference would cover the whole excess of Rs. 15 gross income which the Torre San Patrizio peasant apparently enjoys. For I should say that the more costly dwellings and clothes and cattle shelters necessitated by the European climate cost the Italian peasant at least the difference, Rs. 15 per head per annum. The Konatalapalli ryot probably has more to spend on luxuries after providing for food, clothing, and shelter. He certainly does spend

more on marriages, jewellery, &c. The Torre San Patrizio population has scarcely any money at all for such indulgences as jewellery. I should say there was at least Rs. 25 worth of jewellery at Konatalapalli for every rupee's worth at Torre San Patrizio. On the other hand, the population is ever so much better housed: there is a protected water supply, the streets are paved and are kept clean and lighted; there are metalled roads to the neighbouring villages; there are a doctor and midwife paid from the village fund who have to attend all classes gratuitously; all the male and all the female children are taught the elements of learning gratuitously at the village schools; there is hardly any disease, and the mortality is just half what it is at Konatalapalli. Torre San Patrizio also shares the services of a veterinary, of an agricultural expert, and of an engineer, with neighbouring villages.

Some details of expenditure may be of interest. The payment of debt accounts for Rs. 1,200 per annum, sanitary expenditure for Rs. 2,200, education Rs. 1,500, public works Rs. 630, office and menial establishment Rs. 2,100. For luxuries—maintenance of a rifle-range (Rs. 300), maintenance of a brass band (Rs. 180)—only small sums are provided. Richer villages in Italy maintain opera houses, allot funds for the celebration of festivals, 'make the chairman an entertaining allowance, and so on.

The doctor at Torre San Patrizio gets Rs. 100 a month, plus vaccination and other small allowances; the boys' teacher Rs. 55 a month, and the schoolmistress Rs. 40.

The public works allotment is only for maintenance. The original construction of buildings and roads was defrayed from loans, which have not yet been completely paid off. There is a special state bank in Italy which makes loans to local bodies. For objects, such as water supply and school buildings, which the Government has much at heart, the interest on the loans is reduced to 3 per cent., the state paying the difference between this and the market rate of interest. A particular amount of the village land and house cess has to be earmarked and set apart for the service of any loan that may have been taken.

Another fact which may be of interest is that Torre San Patrizio is not peculiar in raising cesses at such high rates. The total land revenue of Italy was 96 million francs last year. The cesses on this raised by District Boards and village panchayats amounted to no less than 175 million francs. The land cess in Italy is, accordingly, 29 annas in the rupee. Here it is one anna in most districts.

Another difference that may be noted is that here the land cess increases automatically if the land revenue is increased at a resettlement. In Italy it would not be so increased. The local body determines each year what amount it requires, and fixes the number of additional centimes accordingly. In practice, however, variations are seldom made, because the panchayat's expenses vary very little. In Torre San Patrizio exactly the same amount of land and house cesses have been levied for the last thirty-four years.

In practice, however, variations are seldom made, because the panchayat's expenses vary very little. In Torre San Patrizio exactly the same amount of land and house cesses have been levied for the last thirty-four years,

What are the conclusions to be drawn from all the above facts ? I leave that to the reader. I will only observe that all great advances in civilization cost immense sums of money, and that village sanitation and free universal education are quite new things even in Europe, but that no European nation regrets the enormous sacrifices they have involved.¹

§ 39. The truth is that the financial policy of the government of India has been dominated by the maxims of the Manchester school, which held that the greatest possible amount of wealth should be left to fructify in the pockets of the people. The same maxim has ruled in England, and, as Mr. H. A. L. Fisher, the President of the Board of Education, has shown in his recent speech, vast sums, instead of 'fructifying', have been spent on drink and other luxuries which can be dispensed with, without any loss to national efficiency. Education, meanwhile, has been starved, with the result that the British people has been distanced by Germany and several other countries in the race for industrial and general efficiency. In the present war this relative backwardness has brought the whole Commonwealth within an ace of destruction. In India, too, the money left in the pockets of the people has largely failed to fructify. The temptation to spend it on marriage ceremonies and other forms of festivity has been too strong to resist. Our system has allowed vast sums to be spent on useless litigation—the only occupation which an argumentative people have found a congenial substitute for their earlier feuds and forays. Despite the poverty of India there are vast funds capable of diversion from luxuries to education and the industrial development of the country for any government which is strong enough to take them. But it is not only the maxims of Manchester which have dominated the British government in India. It is also the necessities of the situation which were wisely recognized. For, as Lord Cromer was never tired of urging, a great dependency will only submit to a foreign government so long as the rate of taxation is kept exceedingly low. His case is unanswerable; yet the fact remains that, under modern conditions, a low rate of taxation is not consistent with such a measure of progress as will keep the country abreast of others. Still less can

¹ An Indian critic notes: 'Notwithstanding the high taxation the villagers of Torre San Patrizio are better off than the villagers of Konatalapalli. And if villages are not selected I should think the villages of Italy are much better off than those of India.'

a backward country be raised to the average level, without increasing the proportion of its wealth taken for public purposes. On the other hand elective bodies in India are said to be unusually reluctant to increase the rate of taxation.¹ It would seem, therefore, that India can hope to progress only in so far as the power to raise additional revenues is accorded to representative bodies, and, likewise, only in so far as those bodies will face the duties imposed upon them.²

Note.—A criticism from an Indian on the general conclusions of the foregoing study, and also of Mr. Galetti's method of comparing an Indian and Italian village is printed as Appendix B. The reader's special attention is drawn to this paper, which is fairly typical of Indian opinion on the subject. A point of view widely entertained by large sections of people on matters affecting themselves is a political fact at least as well deserving of study as columns of figures. In a note at the end of this Appendix B. I have endeavoured to explain a point which I feel my critic has missed.

¹ A commissioner notes: 'This is probably due in part to the idea generally prevalent that government has vast sums available and could easily make good all deficiencies of income without making further inroads on the pocket of the taxpayer. With further decentralization and the discontinuance of the system of finance by doles this reluctance will probably in time vanish.'

An Indian critic notes: 'I would submit that elective bodies are not reluctant to increase the rate of taxation if they have the power of controlling its disbursement also.'

² A senior member of the I.C.S. notes: 'This is the real limitation. Indian politicians are at no pains to discount the popular belief that the state always has at its disposal untold wealth, produced, like the contents of the conjuror's hat, spontaneously, and their platform, if they have any, postulates reduced, not increased, taxation.'

A civil servant who had reached one of the most responsible positions in India notes: 'Your conclusion that, with representative institutions, taxation can be largely increased, is perfectly sound. It was one of Gokhale's cherished convictions, and he told me personally that he was quite certain that, when once some method of responsibility in government had been evolved, the amount of taxation, including local and municipal taxation, which the people could stand, and would benefit by, might be multiplied by three times what it is at present. At the same time, of course, there is the risk of putting the cart before the horse. Cromer's dictum is perfectly sound, and it is not legitimate to argue that, because taxation can be raised side by side with the bestowal of responsible government, therefore the people are fit for responsible government and can safely be given it! I make this observation merely as a *caveat*. You know my views are fairly liberal in regard to the bestowal of responsible government, only I want to avoid the appearance of arguing in favour of it on a mistaken basis.'

APPENDIX A

NOTES ON ASSESSMENT OF LAND REVENUE, EXEMPTION OF SITE VALUES, AND REDUCTIONS OF AMOUNT LEVIED (see p. 262)

On this subject the following note was made by an officer who, as will be seen, speaks with the highest authority. 'I don't know whether the writer has any information about other provinces, but I can claim for the United Provinces that there is no conflict. Since it became necessary to enforce restrictions on the increase of revenue *no settlement has been made in the United Provinces of which the supervision has not been entrusted to me.* I am aware that some cynics charge settlement officers (even myself also) with "faking the assets", but I repudiate the charge. I insist on a fair valuation of the assets, the calculation of which, in the United Provinces, is based on principles sanctioned by the Government of India, and not in the least altered by the decision to limit the resulting enhancement of revenue. My object is to show the government exactly what is being lost by the restriction on the revenue; and in actual practice the restriction has been effected sometimes by taking a percentage of the assets substantially below 45 per cent. E. g. in two fair-sized tracts in a large district now under settlement the percentage of the assets is 43.8 per cent. and 43.6 per cent. respectively.

'I may add that the restriction works unevenly. In some districts recently settled the average enhancement of revenue has been relatively small, 10 to 15 per cent. In their case, with assets calculated on exactly the same principles as elsewhere, the percentage taken as revenue is 47 or 48 per cent., and the result is a distinct inequality of assessment. The rich progressive district gets off much more lightly than its less prosperous fellow, which has probably paid a relatively high revenue throughout the term of the last settlement.'

Another revenue officer notes: 'It might be thought that the regular reduction in the amount taken by Government denoted a policy on the part of the Government of India. There was of course no policy in the sense that the money released was to be used anyhow else; the reduction was just made in answer to clamour and on the general grounds that it was safer to keep taxation low.

'I suggest that it should now be made a matter of deliberate policy; the reduction being made explicitly on the ground of enabling local bodies to increase their cesses. The next step would be to reduce the enhancement to 25 per cent. on a whole district and to 37½ per cent. on any one mahal. In the meantime the school of revenue officials which proposes to effect the reduction by faking the assets should be transferred to the judicial line. It never has and never can do any country or administration any good to falsify returns. Moreover, with genuine returns there would be provided evidence that government was reducing its land revenue, and the

local bodies would the more readily (and with less zamindar opposition) put on the cesses. Again, with such direct evidence of the reduction of the land revenue percentage, it would become possible in future generations to increase the limit of cesses which local boards might impose.

‘I entirely agree that the surrender of the unearned increment on land, as it changes from an agricultural use to urban uses, is logically indefensible and administratively unfortunate, because much revenue has gone beyond recall. There is, however, a historical basis—I might even say justification—of which the author of the study is presumably aware, and which I do not therefore propose to recite in detail, but which must affect future proposals.

‘The principle under which I did my settlement was to exclude from assessment everything which was not strictly agricultural: e.g. cattle-market dues, bazaar dues, were excluded and referred to the proper authority for income tax.

‘Any assessment on urban lands will therefore include a revision of the principles as at present applied to villages also. This I am prepared to recommend, as I did when on settlement, only to be overruled.

‘The main results of the development of Georgian principles which seem desirable are therefore:

(1) That village-inhabited sites will be theoretically assessable.

(2) That any waste lands in an agricultural tract, from which rents or dues are realized, will be assessed in a similar way to agricultural lands, after deducting the cost of initiation and maintenance. E.g. a cattle-market requiring Rs. 100 advertisement, Rs. 500 in enclosing, and Rs. 6 a month in pay of clerks and Rs. 5 a month in pay of chaukidars, bringing in a monthly income of Rs. 100, would be assessed:

				Rs.
	Gross income	.	.	1,200
loss	{ Recurrent cost	.	132	
	{ Interest on improvement	.	60	192
	Net cost	.	.	1,008

Assessment Rs. 500 or Rs. 450.

(3) Any land which shall in future change from agricultural to urban uses, and which at present pays land revenue on ordinary agricultural assessment, shall continue to be assessed in a similar manner (i.e. on a 50 per cent. basis in United Provinces), whatever urban uses it may be put to.

(4) With respect to land already under urban use, but still under agricultural assessments (i.e. limited by the highest agricultural rate), the limit shall be removed, and the land shall be assessed up to 50 per cent. of its rental value, provided that no one enhancement shall exceed 33½ per cent.

local bodies would the more readily (and with less zamindar opposition) put on the cesses. Again, with such direct evidence of the reduction of the land revenue percentage, it would become possible in future generations to increase the limit of cesses which local boards might impose.

The first part of the chapter is devoted to the study of the properties of the \mathcal{H}^1 norm. In particular, we shall see that the \mathcal{H}^1 norm is the natural norm for the study of the Dirichlet problem for the Laplace equation.

In the second part of the chapter, we shall study the properties of the \mathcal{H}^1 norm in the context of the Dirichlet problem for the Laplace equation. In particular, we shall see that the \mathcal{H}^1 norm is the natural norm for the study of the Dirichlet problem for the Laplace equation. In the third part of the chapter, we shall study the properties of the \mathcal{H}^1 norm in the context of the Dirichlet problem for the Laplace equation. In particular, we shall see that the \mathcal{H}^1 norm is the natural norm for the study of the Dirichlet problem for the Laplace equation.

In the fourth part of the chapter, we shall study the properties of the \mathcal{H}^1 norm in the context of the Dirichlet problem for the Laplace equation. In particular, we shall see that the \mathcal{H}^1 norm is the natural norm for the study of the Dirichlet problem for the Laplace equation. In the fifth part of the chapter, we shall study the properties of the \mathcal{H}^1 norm in the context of the Dirichlet problem for the Laplace equation. In particular, we shall see that the \mathcal{H}^1 norm is the natural norm for the study of the Dirichlet problem for the Laplace equation.

Figure 10.1: A diagram illustrating the Dirichlet problem for the Laplace equation.

In the sixth part of the chapter, we shall study the properties of the \mathcal{H}^1 norm in the context of the Dirichlet problem for the Laplace equation. In particular, we shall see that the \mathcal{H}^1 norm is the natural norm for the study of the Dirichlet problem for the Laplace equation. In the seventh part of the chapter, we shall study the properties of the \mathcal{H}^1 norm in the context of the Dirichlet problem for the Laplace equation. In particular, we shall see that the \mathcal{H}^1 norm is the natural norm for the study of the Dirichlet problem for the Laplace equation.

(5) With regard to land now free of any land revenue at all, nothing can be done except through a municipal tax on rental value.

‘In all cases of land within municipal or town areas, in my opinion, the revenue obtained ought to be a divided head between the central authorities and the local boards. This would give the central government some increase of revenue, but would be (I should propose) mainly used to assist local finances, and would relieve the central government of giving doles, as is now done, to a large extent.

‘With regard to District Boards, a division of certain portions of land revenue would be very cumbrous, if indeed possible. The District Boards which at present receive grants should be given a proportion of the land revenue in its place, and for any further money required should be given power to apply for the imposition of cesses, preferably, in my opinion, a graduated cess on net revenues of Rs. 101 and over—say on :

<i>Rs.</i>	<i>Per cent.</i>
101-250	$1\frac{9}{16}$
251-500	$3\frac{1}{8}$
501-750	$4\frac{1}{16}$
751-1,000	$6\frac{1}{4}$

and so on.

Over 5,001	$12\frac{1}{2}$
----------------------	-----------------

provided that incomes of Rs. 251 pay $1\frac{9}{16}$ per cent. on Rs. 250 and $3\frac{1}{8}$ per cent. on the amount above, incomes of Rs. 501 pay $1\frac{9}{16}$ per cent. on Rs. 250 and $4\frac{1}{16}$ per cent. on the amount over, and so on. This proviso is the result of what in my experience three municipal boards considered an equitable system.

‘The idea of a graduated cess on revenue is new in India, but graduated taxation is now generally recognized to be equitable, and land revenue itself cannot, I think, ever be graduated. I propose to exclude the smaller peasant proprietors altogether, for obvious reasons. This form of cess seems to me to be infinitely superior to the imposition of a graduated income tax on incomes derived from land, and I throw the burden of imposition on the District Board, which is a guarantee that the imposition will be gradual. If District Boards are placed as a delegated department under an Indian ministry so much the better ; but even so, I should retain the initiation of taxation with the District Board, as this will ensure that benefit follows taxation, an object about which considerable anxiety may well be felt in handing over considerable powers to a more or less untried council. It will above all prevent the agricultural community being taxed for city benefit.

‘I may add that if there are councils for smaller areas, the initiation of cess imposition might be given to these councils entirely, e.g. if the United Provinces were redivided for council purposes

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The concentration of the *Agrobacterium* suspension was 10⁶ cells/ml (A), 10⁷ cells/ml (B), 10⁸ cells/ml (C), and 10⁹ cells/ml (D). The concentration of the *Agrobacterium* suspension was 10⁶ cells/ml (A), 10⁷ cells/ml (B), 10⁸ cells/ml (C), and 10⁹ cells/ml (D). The concentration of the *Agrobacterium* suspension was 10⁶ cells/ml (A), 10⁷ cells/ml (B), 10⁸ cells/ml (C), and 10⁹ cells/ml (D).

(5) With regard to land now free of any land revenue at all, nothing can be done except through a municipal tax on rental value.

‘In all cases of land within municipal or town areas, in my opinion, the revenue obtained ought to be a divided head between the central authorities and the local boards. This would give the central government some increase of revenue, but would be (I should propose) mainly used to assist local finances, and would relieve the central government of giving doles, as is now done, to a large extent.

‘With regard to District Boards, a division of certain portions of land revenue would be very cumbrous, if indeed possible. The District Boards which at present receive grants should be given a proportion of the land revenue in its place, and for any further money required should be given power to apply for the imposition of cesses, preferably, in my opinion, a graduated cess on net revenues of Rs. 101 and over—say on :

<i>Rs.</i>	<i>Per cent.</i>
101-250	$1\frac{9}{16}$
251-500	$3\frac{1}{8}$
501-750	$4\frac{1}{16}$
751-1,000	$6\frac{1}{4}$

and so on.

Over 5,001	$12\frac{1}{2}$
----------------------	-----------------

provided that incomes of Rs. 251 pay $1\frac{9}{16}$ per cent. on Rs. 250 and $3\frac{1}{8}$ per cent. on the amount above, incomes of Rs. 501 pay $1\frac{9}{16}$ per cent. on Rs. 250 and $4\frac{1}{16}$ per cent. on the amount over, and so on. This proviso is the result of what in my experience three municipal boards considered an equitable system.

‘The idea of a graduated cess on revenue is new in India, but graduated taxation is now generally recognized to be equitable, and land revenue itself cannot, I think, ever be graduated. I propose to exclude the smaller peasant proprietors altogether, for obvious reasons. This form of cess seems to me to be infinitely superior to the imposition of a graduated income tax on incomes derived from land, and I throw the burden of imposition on the District Board, which is a guarantee that the imposition will be gradual. If District Boards are placed as a delegated department under an Indian ministry so much the better ; but even so, I should retain the initiation of taxation with the District Board, as this will ensure that benefit follows taxation, an object about which considerable anxiety may well be felt in handing over considerable powers to a more or less untried council. It will above all prevent the agricultural community being taxed for city benefit.

‘I may add that if there are councils for smaller areas, the initiation of cess imposition might be given to these councils entirely, e.g. if the United Provinces were redivided for council purposes

into Oudh, Bundelkhand, Kumaon, Agra, and Allahabad, it being recalled that the Oudh, Bundelkhand, and Kumaon Commissions existed within recent times but were absorbed for the centralizing process beloved of secretariats.

'If, however, we are to have nothing between the United Provinces' Council and District Boards, although I should prefer to have the initiation of cess imposition left with District Boards, I would be prepared to compromise, giving the Council the power to impose cesses ranging from say $1\frac{9}{16}$ per cent. to $6\frac{1}{4}$ per cent. on incomes over Rs. 500, and making a corresponding reduction on the amounts assessable by District Boards.

'I may note that $1\frac{9}{16}$ per cent. represents 1 pice per rupee; $3\frac{1}{8}$ per cent. represents 2 pice per rupee, and so on. In my opinion all percentages should be calculated on that basis; and such a figure as $33\frac{1}{3}$ per cent. is worthy of the utmost condemnation, being a purely English idea representing a third; a third of a rupee being the awkward sum of 5 annas 4 pices.'

A third revenue officer notes: 'In connexion with the subject of periodical revisions of land revenue I should be inclined to lay more stress on the fact that it is the landlords themselves who determine the assets of a village. I hope the danger of extending the system of permanent settlements is past, but the cry for extension is not dead, and every warning given by careful students may be useful. Any lengthening of the period of settlement is an out-and-out gift to the zamindars at the expense of the general taxpayer, and certainly not for the benefit of the cultivator in the United Provinces, except where the zamindars are the principal cultivators. The rent of non-occupancy tenants is fixed by competition pure and simple. The power and desire of the zamindar to raise the rents of occupancy tenants is restricted by law. As a general rule, the zamindar is unwilling to give his tenant fixity of rent for anything like the thirty years during which his revenue remains unchanged. At settlement the settlement officer does occasionally raise the rents of occupancy tenants of his own motion, as is pointed out in the pamphlet. It may be taken for granted that this is done only when it is certain that the zamindar would apply for, and get, enhancement immediately after the settlement operations were at an end. Non-rented land, proprietary cultivation, &c., is valued at rates which go on increasing from settlement to settlement, but they are based on the rents which the zamindars fix for tenants and, in practice, they are very much lower than competition rents. In other words, the periodic enhancements of land revenue are the direct result of enhancements of rent imposed by the zamindars themselves (as a result of increased prices, improvements in communications, &c., it is true, but still imposed by the zamindars themselves). The percentage of assets taken, as pointed out in the note, has been gradually reduced in theory till the share now left

to the zamindar is out of all proportion to what it was when their rights were conferred on them, and, in the United Provinces, at any rate, the percentage actually taken is gradually becoming more and more in defect of the theoretical percentage. In ryotwari tracts and in places where the zamindars are cultivating communities any increase in the land revenue is borne by the cultivator to some extent, and may be regarded as a burden on the land. But every cultivating proprietor bought or succeeded to (apart from his tenant rights) a share of the unearned increment which was never more, and was originally much less, than he now has. Where there are outside zamindars, and it is these who howl against progressive enhancements, I do not see how an increase in the land revenue can be, in any way, an increase in the burden on the land. The predecessor in interest of the zamindar was given, or acquired for a price, what was in effect managing rights in the land plus a share in the profits, the other share being reserved to the state. If he is a descendant of the original zamindar he now gets a much bigger share than was given to his ancestor. If he is the representative of a purchaser the purchase money paid was governed by the share which became the purchaser's, and that share has been gradually increased as a matter of grace. The experience of Bengal shows that the zamindar does not expend the increasing profits which he realizes on the improvement of the land. There are good zamindars who devote much attention (the actual outlay is generally paid by the tenant or is, at least, remunerative), but the number of these would not be increased by extending the period of settlement. After all, the zamindar gets the whole benefit of improvements for anything from thirty to sixty years and more than half of the benefit thereafter. The system of periodic revisions does not affect the amount paid by the cultivator. It takes an increasing amount (as a rule), but a decreasing percentage of the increasing profits derived from marketable rights which were in part alienated by the state. If the system affects rents at all it is probably in the direction of checking growth, as some landlords believe in keeping down rents in order to keep down revenue.

APPENDIX B

AN INDIAN CRITICISM OF THE STUDY OF LAND REVENUE AS A WHOLE, AND ON MR. GALETTI'S COMPARISON

I

MR. LIONEL CURTIS in his study of the subject seeks to establish the following propositions :

First, that the land revenue system in vogue in India is not a British innovation but a mere inheritance from the former governments of the country.

to the zamindar is out of all proportion to what it was when their rights were conferred on them, and, in the United Provinces, at any rate, the percentage actually taken is gradually becoming more and more in defect of the theoretical percentage. APPENDIX B

AN INDIAN CRITICISM OF THE STUDY OF LAND REVENUE AS A WHOLE, AND ON MR. GALETTI'S COMPARISON

I

MR. LIONEL CURTIS in his study of the subject seeks to establish the following propositions :

First, that the land revenue system in vogue in India is not a British innovation but a mere inheritance from the former governments of the country.

1. The first part of the document is a letter from the President of the United States to the Congress, dated January 3, 1862. It is a very important document, as it contains the President's views on the state of the Union and the progress of the war. The President discusses the military situation, the economy, and the political climate. He also mentions the recent death of General Grant and the appointment of General Sherman. The letter is written in a formal, official style, and is signed by the President.

2. The second part of the document is a report from the Secretary of the War Department, dated January 10, 1862. It is a very important document, as it contains the Secretary's views on the state of the war and the progress of the military. The Secretary discusses the military situation, the economy, and the political climate. He also mentions the recent death of General Grant and the appointment of General Sherman. The report is written in a formal, official style, and is signed by the Secretary.

3. The third part of the document is a report from the Secretary of the Navy Department, dated January 10, 1862. It is a very important document, as it contains the Secretary's views on the state of the navy and the progress of the naval war. The Secretary discusses the military situation, the economy, and the political climate. He also mentions the recent death of General Grant and the appointment of General Sherman. The report is written in a formal, official style, and is signed by the Secretary.

4. The fourth part of the document is a report from the Secretary of the Treasury Department, dated January 10, 1862. It is a very important document, as it contains the Secretary's views on the state of the treasury and the progress of the financial war. The Secretary discusses the military situation, the economy, and the political climate. He also mentions the recent death of General Grant and the appointment of General Sherman. The report is written in a formal, official style, and is signed by the Secretary.

5. The fifth part of the document is a report from the Secretary of the Interior Department, dated January 10, 1862. It is a very important document, as it contains the Secretary's views on the state of the interior and the progress of the land war. The Secretary discusses the military situation, the economy, and the political climate. He also mentions the recent death of General Grant and the appointment of General Sherman. The report is written in a formal, official style, and is signed by the Secretary.

APPENDIX

1. The first part of the appendix is a list of the names of the members of the Congress, dated January 3, 1862. It is a very important document, as it contains the names of the members of the Congress who were present at the time of the President's letter. The list is written in a formal, official style, and is signed by the President.

2. The second part of the appendix is a list of the names of the members of the War Department, dated January 10, 1862. It is a very important document, as it contains the names of the members of the War Department who were present at the time of the Secretary's report. The list is written in a formal, official style, and is signed by the Secretary.

3. The third part of the appendix is a list of the names of the members of the Navy Department, dated January 10, 1862. It is a very important document, as it contains the names of the members of the Navy Department who were present at the time of the Secretary's report. The list is written in a formal, official style, and is signed by the Secretary.

4. The fourth part of the appendix is a list of the names of the members of the Treasury Department, dated January 10, 1862. It is a very important document, as it contains the names of the members of the Treasury Department who were present at the time of the Secretary's report. The list is written in a formal, official style, and is signed by the Secretary.

5. The fifth part of the appendix is a list of the names of the members of the Interior Department, dated January 10, 1862. It is a very important document, as it contains the names of the members of the Interior Department who were present at the time of the Secretary's report. The list is written in a formal, official style, and is signed by the Secretary.

Secondly, that this inheritance confers on the state not merely the right to collect the revenues but the right of general ownership of the land.

Thirdly, that as a natural corollary the revenues collected are of the nature of rent and not at all of the nature of taxation.

Fourthly, that as a further rational corollary there can be and should be no reasonable objection to a periodic fresh valuation of the rents due.

Fifthly, that the incidence of revenue is not only exceedingly moderate as compared with the exactions in pre-British times, but compares very favourably with countries where the circumstances are to some extent similar, such as Italy and Japan.

Sixthly, that the absence of this periodic revision of assessment has led to grave evils in tracts where the mistake of a permanent settlement has been committed.

And lastly, that a backward country like India cannot hope to rise to the average level unless she submits to heavier taxation.

Incidentally Mr. Lionel Curtis has hinted that the Government of India is exceptionally economical, whereas, on the contrary, the people of India are exceptionally wasteful, both on litigation and on social occasions.

It must not be supposed from the above bald summary that Mr. Curtis has laid down all these propositions in so many words. Not at all. His argument is much too subtle and is built up with great skill.

Mr. Lionel Curtis has in a most fair-minded manner made the following admission as well :

‘Had government thought from the outset of fitting the people for the various and rapidly changing conditions of life their administration might have contributed more in the end to moral and political as well as to material progress.’ Further, it is to his credit that he has not approached the problem from a merely statistician’s point of view. He has specially emphasized the intimate relation between social conditions and the revenue system. ‘That relation’, Mr. Curtis says, ‘is nowhere more close than in India, and goes far towards justifying the use of the word “revenue” to denote “general administration”.’

II

If the various propositions sought to be proved by Mr. Lionel Curtis are held to have been established the following conclusions are irresistible :

(a) That all criticism of the land revenue policy of the Government of India is not only a wicked impertinence but a most unpatriotic undertaking. The government being the owner of the land no critic has any legal *locus standi* to call in question the adjustment of rent between the owner and his tenant. It is sheer waste of time. If taxation is the test of progress the larger the taxes the greater

Secondly, that this inheritance confers on the state not merely the right to collect the revenues but the right of general ownership of the land.

Thirdly, that as a natural corollary the revenues collected are of the nature of rent and not at all of the nature of taxation.

Fourthly, that as a further rational corollary there can be and should be no reasonable objection to a periodic fresh valuation of the rents due.

Fifthly, that the incidence of revenue is not only exceedingly moderate as compared with the exactions in pre-British times, but compares very favourably with countries where the circumstances are to some extent similar, such as Italy and Japan.

Sixthly, that the absence of this periodic revision of assessment has led to grave evils in tracts where the mistake of a permanent settlement has been committed.

And lastly, that a backward country like India cannot hope to rise to the average level unless she submits to heavier taxation.

Incidentally Mr. Lionel Curtis has hinted that the Government of India is exceptionally economical, whereas, on the contrary, the people of India are exceptionally wasteful, both on litigation and on social occasions.

It must not be supposed from the above bald summary that Mr. Curtis has laid down all these propositions in so many words. Not at all. His argument is much too subtle and is built up with great skill.

Mr. Lionel Curtis has in a most fair-minded manner made the following admission as well :

‘Had government thought from the outset of fitting the people for the various and rapidly changing conditions of life their administration might have contributed more in the end to moral and political as well as to material progress.’ Further, it is to his credit that he has not approached the problem from a merely statistician’s point of view. He has specially emphasized the intimate relation between social conditions and the revenue system. ‘That relation’, Mr. Curtis says, ‘is nowhere more close than in India, and goes far towards justifying the use of the word “revenue” to denote “general administration”.’

II

If the various propositions sought to be proved by Mr. Lionel Curtis are held to have been established the following conclusions are irresistible :

(a) That all criticism of the land revenue policy of the Government of India is not only a wicked impertinence but a most unpatriotic undertaking. The government being the owner of the land no critic has any legal *locus standi* to call in question the adjustment of rent between the owner and his tenant. It is sheer waste of time. If taxation is the test of progress the larger the taxes the greater

The book is divided into two main parts. The first part, 'The History of the Church', covers the period from the early Christian era to the present. The second part, 'The Church in the Future', discusses the challenges and opportunities facing the church in the 21st century. The author, a prominent theologian and church leader, provides a comprehensive overview of the church's development over time, from its origins in the Middle East to its spread across the world. He also explores the various theological and practical issues that have shaped the church's identity and mission. The book is written in a clear and accessible style, making it suitable for both scholars and general readers. It is a valuable resource for anyone interested in the history and future of the Christian church.

159

The book is a comprehensive study of the church's history and future. It covers the period from the early Christian era to the present, and discusses the challenges and opportunities facing the church in the 21st century. The author, a prominent theologian and church leader, provides a comprehensive overview of the church's development over time, from its origins in the Middle East to its spread across the world. He also explores the various theological and practical issues that have shaped the church's identity and mission. The book is written in a clear and accessible style, making it suitable for both scholars and general readers. It is a valuable resource for anyone interested in the history and future of the Christian church.

the progress, and whoever stands in the way of enhancement of assessments in the name of patriotism is a self-condemned ignoramus. Mr. Lionel Curtis's study, in short, is intended to be a most crushing criticism of the congress school—the *coup de grâce* to Mr. Dutt's self-created monster of over-assessment.

(b) That India being the most lightly-taxed community in the world, and the Indian Government being the most economical, the system should be pushed to its logical extreme, subject, of course, to the condition that the incidence does not reach such a pitch that a foreign government becomes intolerable. In connexion with this last it is of interest to quote the following two sentences from Mr. Curtis: 'For, as Lord Cromer was never tired of urging, a great dependency will only submit to a foreign government so long as the rate of taxation is kept exceedingly low. His case is unanswerable; yet the fact remains that, under modern conditions, a low rate of taxation is not consistent with such a measure of progress as will keep the country abreast of others.' Are we to conclude that the government has intentionally kept the taxation low, and has thus intentionally stood in the way of progress simply in order to gain the selfish object of perpetuating the existing foreign government? Mr. Curtis certainly did not intend to draw that conclusion, but somebody else may. Mr. Curtis also seems to deplore the fact 'that the financial policy of the Government of India has been dominated by the maxims of the Manchester school, which held that the greatest possible amount of wealth should be left to fructify in the pockets of the people'. Mr. Curtis, on the other hand, would in the interests of India (at least this is what he says) prefer that the greatest possible amount of wealth should be withdrawn from the people and should be spent by the state or such bodies as local boards, &c. This last ideal is supposed to furnish the panacea for all evils.

III

The object of the following brief remarks is to present a point of view slightly different from that of Mr. Curtis. It is impossible categorically to contradict each and every statement in Mr. Curtis's study. There is much that is entirely true, there is a great deal that is true only in a narrow sense of the term, but the whole is coloured by an indefinable tinge of racial aloofness. One need not call it prejudice. The study is merely another illustration of the fact that it is next to impossible for the foreign rulers of a country like India to get into the skins of their subjects and feel things as the subject people do.

When a man has the toothache he simply says so. He does not stop to analyse the etiology of the disease. He simply yells it out. In the matter of revenue India has the toothache, and she has been yelling out her pain for the last two decades. Mr. Curtis has analysed the entire structure of the jaw with faultless anatomical knowledge

the progress, and whoever stands in the way of enhancement of assessments in the name of patriotism is a self-condemned ignoramus. Mr. Lionel Curtis's study, in short, is intended to be a most crushing criticism of the congress school—the *coup de grâce* to Mr. Dutt's self-created monster of over-assessment.

(b) That India being the most lightly-taxed community in the world, and the Indian Government being the most economical, the system should be pushed to its logical extreme, subject, of course, to the condition that the incidence does not reach such a pitch that a foreign government becomes intolerable. In connexion with this last it is of interest to quote the following two sentences from Mr. Curtis: 'For, as Lord Cromer was never tired of urging, a great dependency will only submit to a foreign government so long as the rate of taxation is kept exceedingly low. His case is unanswerable; yet the fact remains that, under modern conditions, a low rate of taxation is not consistent with such a measure of progress as will keep the country abreast of others.' Are we to conclude that the government has intentionally kept the taxation low, and has thus intentionally stood in the way of progress simply in order to gain the selfish object of perpetuating the existing foreign government? Mr. Curtis certainly did not intend to draw that conclusion, but somebody else may. Mr. Curtis also seems to deplore the fact 'that the financial policy of the Government of India has been dominated by the maxims of the Manchester school, which held that the greatest possible amount of wealth should be left to fructify in the pockets of the people'. Mr. Curtis, on the other hand, would in the interests of India (at least this is what he says) prefer that the greatest possible amount of wealth should be withdrawn from the people and should be spent by the state or such bodies as local boards, &c. This last ideal is supposed to furnish the panacea for all evils.

III

The object of the following brief remarks is to present a point of view slightly different from that of Mr. Curtis. It is impossible categorically to contradict each and every statement in Mr. Curtis's study. There is much that is entirely true, there is a great deal that is true only in a narrow sense of the term, but the whole is coloured by an indefinable tinge of racial aloofness. One need not call it prejudice. The study is merely another illustration of the fact that it is next to impossible for the foreign rulers of a country like India to get into the skins of their subjects and feel things as the subject people do.

When a man has the toothache he simply says so. He does not stop to analyse the etiology of the disease. He simply yells it out. In the matter of revenue India has the toothache, and she has been yelling out her pain for the last two decades. Mr. Curtis has analysed the entire structure of the jaw with faultless anatomical knowledge

and says that there should be no pain. In his own way he is right. He does not feel the pain, and it is not a thing that can be shown to him. He neither feels it nor sees it. For him it does not exist. But is it so for the Indian? Decidedly not. Mr. R. C. Dutt took up the question a quarter of a century ago. He argued it to the best of his ability and failed. He was bound to fail. So were all others, including Mr. Digby. The reason was obvious, viz. that they admitted the correctness, or at least the partial correctness, of official premises and official statistics. Official statistics are prepared on a special plan, and it is as easy for official figures to lead to accurate conclusions as for a camel to pass through the eye of a needle. A very simple test can prove this. When the controversy between Mr. R. C. Dutt and Lord Curzon was at its highest, no official apologists ever dared to place the income per head higher than Rs. 37 per annum. The critics of the government placed it as low as Rs. 27. In those days the cost of merely feeding an under-trial prisoner in a jail was roughly Rs. 45 per annum. How then did the Indian peasant manage to exist? Evidently he must have starved and taken only one meal instead of two.

It is not certain what the official average income per head is just at present, but by no stretch of imagination can that income be placed higher than Rs. 54 per annum. In these days the cost of feeding (apart from clothes, shoes, &c.) an under-trial prisoner is approximately Rs. 66 to Rs. 70. The majority of the people, considering that the richer classes spend tremendous amounts on their personal comforts, must in the matter of food be leading very much worse lives than is led by an under-trial prisoner. There can be many explanations for this apparent absurdity, but the fact is that the Indians have no rival in the art of existing without living. Clive's sepoy immortalized themselves by letting British soldiers have the rice and by themselves subsisting on the water in which the rice was boiled. That was truly very cheap fame. The sepoy did it for a day or two. Indian ryots have now done it for well-nigh fifty years. They have not *lived*; they have only *existed*, and that, too, not for themselves but *for others*. As Mr. Curtis truly remarks, the congested hamlets of India are strangely suggestive of ant-heaps. But even Mr. Curtis calls upon the dwellers of those ant-heaps to give up the little that they have. 'From him who hath but little even that little shall be taken away.' By all means do it, but do not say that he must not even cry. Take a concrete instance. In the Punjab the total land revenue in 1911-12 was nearly half a crore more than what it was in 1906-7. Nearly half a crore has been added since then: *a crore per annum in a decade*. How, one may ask, has this additional crore per annum in the pockets of the government fructified to the advantage of the people? One may ask, but like many another vain request it will remain unanswered. The ant-heaps continue as before, disease continues as before, and mortality continues as before. The

and says that there should be no pain. In his own way he is right. He does not feel the pain, and it is not a thing that can be shown to him. He neither feels it nor sees it. For him it does not exist. But is it so for the Indian? Decidedly not. Mr. R. C. Dutt took up the question a quarter of a century ago. He argued it to the best of his ability and failed. He was bound to fail. So were all others, including Mr. Digby. The reason was obvious, viz. that they admitted the correctness, or at least the partial correctness, of official premises and official statistics. Official statistics are prepared on a special plan, and it is as easy for official figures to lead to accurate conclusions as for a camel to pass through the eye of a needle. A very simple test can prove this. When the controversy between Mr. R. C. Dutt and Lord Curzon was at its highest, no official apologists ever dared to place the income per head higher than Rs. 37 per annum. The critics of the government placed it as low as Rs. 27. In those days the cost of merely feeding an under-trial prisoner in a jail was roughly Rs. 45 per annum. How then did the Indian peasant manage to exist? Evidently he must have starved and taken only one meal instead of two.

It is not certain what the official average income per head is just at present, but by no stretch of imagination can that income be placed higher than Rs. 54 per annum. In these days the cost of feeding (apart from clothes, shoes, &c.) an under-trial prisoner is approximately Rs. 66 to Rs. 70. The majority of the people, considering that the richer classes spend tremendous amounts on their personal comforts, must in the matter of food be leading very much worse lives than is led by an under-trial prisoner. There can be many explanations for this apparent absurdity, but the fact is that the Indians have no rival in the art of existing without living. Clive's sepoys immortalized themselves by letting British soldiers have the rice and by themselves subsisting on the water in which the rice was boiled. That was truly very cheap fame. The sepoys did it for a day or two. Indian ryots have now done it for well-nigh fifty years. They have not *lived*; they have only *existed*, and that, too, not for themselves but *for others*. As Mr. Curtis truly remarks, the congested hamlets of India are strangely suggestive of ant-heaps. But even Mr. Curtis calls upon the dwellers of those ant-heaps to give up the little that they have. 'From him who hath but little even that little shall be taken away.' By all means do it, but do not say that he must not even cry. Take a concrete instance. In the Punjab the total land revenue in 1911-12 was nearly half a crore more than what it was in 1906-7. Nearly half a crore has been added since then: *a crore per annum in a decade*. How, one may ask, has this additional crore per annum in the pockets of the government fructified to the advantage of the people? One may ask, but like many another vain request it will remain unanswered. The ant-heaps continue as before, disease continues as before, and mortality continues as before. The

complaint of India is not that she is taxed heartlessly, but that her revenues are wasted in a most prodigal spirit. Give India the power to spend her money herself and she will willingly submit to very much heavier taxation, because in that case the money will fructify. At present it does not fructify either in the pockets of the people or in the pockets of the Government, and the best plan is to leave it in the pockets of the people. It may be an old-fashioned thing to say, but every cent taken away from the people needlessly is a crime. Henry George would have been the first to say so. All his system was based on the supposition that it would be applied in countries having a government of the people, by the people, and for the people. It never could occur to him to let a handful of outsiders do both the collecting and the spending for an entire continent without their approval, nay, even without their knowledge. This is the crux of the situation. People express it differently. Mr. R. C. Dutt tried to fight against periodic revisions of assessment, and the only assurance he got was that the enhancements would not be too sudden, the assurance that India would not be bled to death but only bled white. Mr. Dutt's mistake was that instead of fighting expenditure he fought income, and he overlooked one important fact just as the average assessing officer does. Just as Mr. Curtis has done. That fact is that prices must never be applied to the gross produce but only to the surplus, the surplus left after allowance has been made for all crops consumed for purposes of human and cattle food and for seed. Thus in the case of Konatalapalli it has been assumed that the 400 acres of cotton gave a crop worth Rs. 16,000, but one may defy anybody to prove from any reliable accounts that as a matter of fact cotton did bring to the village a sum anywhere near Rs. 16,000 in the year in which the area under cotton was 400 acres. Cotton is used by villagers often in place of actual cash. It is bartered for seed, it is bartered for salt and sugar, and it is bartered for numerous other things at absurdly low rates. It must also be pointed out that Mr. Curtis has not made any deduction for the price of seed in arriving at the gross value of the annual produce. But I proceed to discuss below at length the specific case of village Konatalapalli. So much has been made of the statistics of this village that if the figures remain unexplained the Indian case may be judged *ex parte*.

TORRE SAN PATRIZIO *versus* KONATALAPALLI

The first omission that should meet the eye of even an inexperienced revenue officer is that the amount of the floating debt of the village Konatalapalli has not been mentioned nor the amount annually paid in interest. Why this serious omission? Mr. Galetti did give some figures relating to expenditure in the case of the Italian village, why not in the case of the Indian village? Again, even while it is admitted that the people eat their maize, the gross

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the transparency and accountability of the organization. The document then outlines the specific procedures for recording transactions, including the use of standardized forms and the requirement for double-entry bookkeeping. It also discusses the importance of regular audits and the role of the internal control system in ensuring the integrity of the financial data. The document concludes by stating that the organization is committed to maintaining the highest standards of financial reporting and to providing accurate and timely information to all stakeholders.

The second part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the transparency and accountability of the organization. value of maize is estimated to be Rs. 30,000. What is the use of such calculations? A seer of grain remains a seer of grain whether you value it at one anna or at one rupee. The writer recently had to estimate the value of the total output of straw in a certain village in the Punjab. The value at the present famine rates came to Rs. 30,000, and yet for those Rs. 30,000 the village had nothing to show except lean cattle. This is the great fallacy—the fallacy of applying money values to things that should not be expressed in terms of hard cash. A good strong bullock is bound to consume 30 seers of green fodder every day, and it is immaterial to the bullock whether the official calculation makes the village responsible for a total output of several thousands of rupees in the shape of fodder.

Again, Mr. Gulletti has not given any figures relating to sales and mortgages during the last twenty years in Konatalapalli. That is the first thing at which a settlement officer does and should look. Had the figures relating to indebtedness and transfers been available, and had we known the number of cattle to be fed, we could have at once explained as to why it is easier for the Italian village to pay such apparently high taxation than for the Indian village to pay this low taxation. In reality the high taxation in the Italian village is only nominal, because the money is spent by the people on themselves and by themselves. The Italian village paves its roads, lights them, maintains a doctor and a school, which are all luxuries from the point of view of the Indian peasant. To him it is much more important that his wife should be buried decently than that he should have his streets lighted and his child medically treated free of cost. It may be sheer ignorance and perversity on the part of the Indian peasant, but this is his view, and the government has so far stood in the way of the peasant being able to change his view. The government has denied him compulsory education, and what is worse (I am adopting Mr. Curtis's words), the government never thought of fitting the people for the rapidly changing conditions of life.

I now pass on to consider some of the statistics. It is our daily experience that it is easier for a man with an income of Rs. 2,000 per annum to spare 50 per cent. of his income for public purposes than for a man with an income of Rs. 50 per annum to spare 1 per cent. for similar objects. People on the verge of starvation must be judged by an absolutely different standard from what would be applied to people in comfortable circumstances. Let us now consider the statistics of Konatalapalli.

Area	2,500 acres
Population	1,300 souls
Gross income	Rs. 70,000
Gross income per head	Rs. 55 per annum
Net income per head after paying taxation	Rs. 17

As the total population contains children, whose consumption of food is less than that of adults, we will consider the case of a family of

People on the verge of starvation must be judged by an absolutely different standard from what would be applied to people in comfortable circumstances. Let us now consider the statistics of Konatalapalli.

Area	2,500 acres
Population	1,300 souls
Gross income	Rs. 70,000
Gross income per head	Rs. 55 per annum
Net income per head after paying taxation	Rs. 17

As the total population contains children, whose consumption of food is less than that of adults, we will consider the case of a family of

The book is divided into two main parts. The first part, 'The History of the Book', covers the period from the 15th century to the 18th century. It begins with a discussion of the early printed book, the 15th-century book, and the 16th-century book. The second part, 'The History of the Book', covers the period from the 18th century to the 19th century. It begins with a discussion of the 18th-century book, the 19th-century book, and the 20th-century book. The book is written in a clear and concise style, and it is well illustrated with numerous examples of books from the period. The book is a valuable resource for anyone interested in the history of the book.

four—husband, wife, and two children, or one old man and one child. The total gross income for these four would be Rs. 220 per annum. As the gross income has been arrived at after including the sale of all cotton and all grain, let us make an estimate of their cost of living. The family must be supposed to have one plough, cattle, and one cow.

			<i>Annual value.</i>
Food for family	2 seers of grain per diem or 18 mds. per annum		Rs. 50
Ghi	Nil		Nil
Salt, sugar, condiments, wood	Rs. 1 per mensum		Rs. 12
Clothes	Rs. 30 per annum		Rs. 30
Shoes (allowing none for children)	Rs. 6 per annum		Rs. 6
Food for two head of cattle (without cost of green fodder)	Rs. 10 per mensum		Rs. 120
Pulses, vegetables, and oil for lighting and food	Rs. 1 per mensum		Rs. 12
Medicine and religion	Rs. 1 per mensum		Rs. 12
House repairs and renewal of agricultural implements	Nil		Nil
Taxation at Rs. 2/8 per head	Rs. 10 per annum		Rs. 10
Seed for 8 acres	Rs. 12		Rs. 12
			Rs. 264

According to this ridiculously low estimate the family cannot live on its income. It must be cutting out some item or other. It must be going without shoes and without clothes, because seed and cattle cannot be cut out, nor can the allowance of 2 seers of grain be reduced further, as no allowance has been made for guests or beggars nor any for litigation nor for liquor nor any for capital with which to buy bullocks in case of an epidemic. Nor has any allowance been made for interest to be paid to the *sahukar*. This is the real situation leading to chronic indebtedness. Mr. Galetti has not referred to the settlement officer's note about the village. Had he referred to that and reproduced the relevant portions the public would have been in a better position to judge of the condition of the village. Ten to one the settlement officer must have noted that the village could not pay a higher revenue, although according to the prescribed standards the assessment is lenient. Now the question is what would the Indian peasant prefer to cut out of his budget on the debit side? Would it be shoes or the revenue? Would it be a shirt or the revenue? Certainly neither the shoes nor the shirt. But he is so situated that he has no choice. There is, however, still another way of looking at the question, following strictly Mr. Galetti's figures and conclusions. Mr. Galetti says that the net income per head of population after paying taxes is in Konatalapalli Rs. 17

four—husband, wife, and two children, or one old man and one child. The total gross income for these four would be Rs. 220 per annum. As the gross income has been arrived at after including the sale of all cotton and all grain, let us make an estimate of their cost of living. The family must be supposed to have one plough, cattle, and one cow.

			<i>Annual value.</i>
Food for family	2 seers of grain per diem or 18 mds. per annum		Rs. 50
Ghi	Nil		Nil
Salt, sugar, condiments, wood	Rs. 1 per mensem		Rs. 12
Clothes	Rs. 30 per annum		Rs. 30
Shoes (allowing none for children)	Rs. 6 per annum		Rs. 6
Food for two head of cattle (without cost of green fodder)	Rs. 10 per mensem		Rs. 120
Pulses, vegetables, and oil for lighting and food	Rs. 1 per mensem		Rs. 12
Medicine and religion	Rs. 1 per mensem		Rs. 12
House repairs and renewal of agricultural implements	Nil		Nil
Taxation at Rs. 2/8 per head	Rs. 10 per annum		Rs. 10
Seed for 8 acres	Rs. 12		Rs. 12
			<u>Rs. 264</u>

According to this ridiculously low estimate the family cannot live on its income. It must be cutting out some item or other. It must be going without shoes and without clothes, because seed and cattle cannot be cut out, nor can the allowance of 2 seers of grain be reduced further, as no allowance has been made for guests or beggars nor any for litigation nor for liquor nor any for capital with which to buy bullocks in case of an epidemic. Nor has any allowance been made for interest to be paid to the *sahukar*. This is the real situation leading to chronic indebtedness. Mr. Galetti has not referred to the settlement officer's note about the village. Had he referred to that and reproduced the relevant portions the public would have been in a better position to judge of the condition of the village. Ten to one the settlement officer must have noted that the village could not pay a higher revenue, although according to the prescribed standards the assessment is lenient. Now the question is what would the Indian peasant prefer to cut out of his budget on the debit side? Would it be shoes or the revenue? Would it be a shirt or the revenue? Certainly neither the shoes nor the shirt. But he is so situated that he has no choice. There is, however, still another way of looking at the question, following strictly Mr. Galetti's figures and conclusions. Mr. Galetti says that the net income per head of population after paying taxes is in Konatalapalli Rs. 17

and in Torre San Patrizio Rs. 22, or if we include the revenue the net income is Rs. 19/3/7 in the Indian village and Rs. 30/12/4 in the Italian village. Mr. Galetti's argument is that the Italian pays Rs. 8/12/4 out of Rs. 30/12/4, whereas the Indian pays only Rs. 2/3/7 out of Rs. 19/3/7. He concludes that the Indian is very lightly taxed. This argument shows, as nothing else could, the absurdity of Mr. Galetti's position. The Indian point of view is simply this, that no individual, whether in India or anywhere else in the world, should be taxed a penny if his net income is less than Rs. 20 per annum, because a person with a net income of Rs. 20 per annum is an object of charity, and not an object of taxation. The Italian could still afford to pay another Rs. 2 per annum, and yet not be so badly off as is the Indian. Can Mr. Galetti or any other statistician show anywhere in Europe a net income of Rs. 19/3/7 per head of the agricultural population out of which Rs. 2/3/7 have still to be paid as taxes? It must not be forgotten that it is out of this net income of Rs. 17 per annum that the Indian has to clothe himself, to pay the interest on his debts, and to meet the thousand and one calls on his purse. It is for spending this glorious sum of Rs. 1/7 per mensem that the Indian is being called luxurious and wasteful. This is the sum which has failed to fructify in the Indian's pocket, and which it is now considered equitable to withdraw. One need not point out that the Italian has a net income of Rs. 22 per annum after providing for the paving and lighting of his streets and after paying for the doctor and the schoolmaster, whereas the Indian is expected to meet all these charges out of his Rs. 17 per annum. Mr. Galetti has proved the Indian case as no Indian ever did.

IV

An important part of the argument is that the British government has only *inherited* this scheme of land revenue, which is really indigenous to the soil. If (as Mr. Curtis says) the word 'revenue' may be used to denote 'general administration' the Indian point of view is most emphatically this—that the system is not inherited from the Mughals. We would have admitted the inheritance if, like the Mughals, the British government had appointed men like Mr. Gokhale, Sir Subramani Iyer, Sir Pheroze Shah Mehta, and others to such posts as Chancellorship of the Exchequer, Governorship of Canada, and so on. Where are the modern Todar Malls, Jai Singhs, and Man Singhs? Nowhere; and yet, as none knows better than the British, that, too, was a part of the general administration which Akbar introduced. Sir Michael O'Dwyer, in his evidence before the Royal Decentralization Commission, drew pointed attention to the fact that the present-day government officials had unlimited powers to punish, but no powers to reward. He referred specially to grants of land and revenue. It was a part of the Mughal system to reward service generously and to make no distinctions of caste or creed. Why was *that* not inherited?

and in Torre San Patrizio Rs. 22, or if we include the revenue the net income is Rs. 19/3/7 in the Indian village and Rs. 30/12/4 in the Italian village. Mr. Galetti's argument is that the Italian pays Rs. 8/12/4 out of Rs. 30/12/4, whereas the Indian pays only Rs. 2/3/7 out of Rs. 19/3/7. He concludes that the Indian is very lightly taxed. This argument shows, as nothing else could, the absurdity of Mr. Galetti's position. The Indian point of view is simply this, that no individual, whether in India or anywhere else in the world, should be taxed a penny if his net income is less than Rs. 20 per annum, because a person with a net income of Rs. 20 per annum is an object of charity, and not an object of taxation. The Italian could still afford to pay another Rs. 2 per annum, and yet not be so badly off as is the Indian. Can Mr. Galetti or any other statistician show anywhere in Europe a net income of Rs. 19/3/7 per head of the agricultural population out of which Rs. 2/3/7 have still to be paid as taxes? It must not be forgotten that it is out of this net income of Rs. 17 per annum that the Indian has to clothe himself, to pay the interest on his debts, and to meet the thousand and one calls on his purse. It is for spending this glorious sum of Rs. 1/7 per mensem that the Indian is being called luxurious and wasteful. One need not point out that the Italian has a net income of Rs. 22 per annum after providing for the paving and lighting of his streets and after paying for the doctor and the schoolmaster, whereas the Indian is expected to meet all these charges out of his Rs. 17 per annum. Mr. Galetti has proved the Indian case as no Indian ever did.

IV

An important part of the argument is that the British government has only *inherited* this scheme of land revenue, which is really indigenous to the soil. If (as Mr. Curtis says) the word 'revenue' may be used to denote 'general administration' the Indian point of view is most emphatically this—that the system is not inherited from the Mughals. We would have admitted the inheritance if, like the Mughals, the British government had appointed men like Mr. Gokhale, Sir Subramani Iyer, Sir Pheroze Shah Mehta, and others to such posts as Chancellorship of the Exchequer, Governorship of Canada, and so on. Where are the modern Todar Malls, Jai Singhs, and Man Singhs? Nowhere; and yet, as none knows better than the British, that, too, was a part of the general administration which Akbar introduced. Sir Michael O'Dwyer, in his evidence before the Royal Decentralization Commission, drew pointed attention to the fact that the present-day government officials had unlimited powers to punish, but no powers to reward. He referred specially to grants of land and revenue. It was a part of the Mughal system to reward service generously and to make no distinctions of caste or creed. Why was *that* not inherited?

It may be boldly stated that from the point of view of India this partial inheritance is of no use. Would Akbar have levied the countervailing duties on piece-goods manufactured in India? Certainly not. In the face of these facts it is only very remotely true that the present system is the same old system revived. In reality it is a new system. The government is taking what it can, and in the best way that it can, regardless of precedents and solely on grounds of expediency. The rent theory is advanced because it serves best to answer the critics, but now that the fluctuating system of assessment is coming more and more into vogue who can deny that land revenue is really a tax on tillage. For the essence of the fluctuating system is, *no crops, no revenue*. The very fact that government felt the necessity of having a Land Acquisition Act shows conclusively that land revenue really is a tax. The controversy on this point, however, is really endless and has no practical interest. None knows better than the government that the rent theory cannot be pushed to its logical extreme.

It must not be supposed from the above that the present writer is opposed to any and every increase in taxation. The golden rule is that no government is justified in taking more from the public than what is absolutely necessary, and, further, that the final and only judge of this necessity is not the government but the public. The purse-strings, as in all enlightened countries, must be in the hands of the people. Indians should agitate not against the incidence of the land revenue but against its wasteful consumption on pageants and brick and mortar. That is the one sane attitude to adopt. Let the government, as in the Italian village, give to people loans on 3 per cent. and pay the difference from its pocket. Let the government return a part of the revenue to each village as in Torre for education, and, most of all, let the government think of fitting the people for the changed environments of modern life. It is time that the government did some thinking.

AUTHOR'S NOTE ON THE FOREGOING CRITICISM

The question under discussion is 'How is the produce of land in India apportioned amongst various claimants?'

My Indian critic writes as though two sets of claimants only had to be considered:

- (1) The people of India;
- (2) The government.

In my treatment of the question I saw three sets of claimants to be considered:

- (1) The cultivators;
- (2) The land-owners;
- (3) The government.

The conclusion at which I arrived in India was that (1) the

It may be boldly stated that from the point of view of India this partial inheritance is of no use. Would Akbar have levied the countervailing duties on piece-goods manufactured in India? It is time that the government did some thinking.

AUTHOR'S NOTE ON THE FOREGOING CRITICISM

The question under discussion is 'How is the produce of land in India apportioned amongst various claimants?'

My Indian critic writes as though two sets of claimants only had to be considered:

- (1) The people of India;
- (2) The government.

In my treatment of the question I saw three sets of claimants to be considered:

- (1) The cultivators;
- (2) The land-owners;
- (3) The government.

The conclusion at which I arrived in India was that (1) the

cultivators (the great mass of the people) are living dangerously near the margin of subsistence, so near that an unfavourable season in any one area threatens that area with famine.

I further formed the opinion, for what it was worth, that a drastic diminution in the present cost of government would lead to results which would leave the masses not better but worse off than they now are. Any economies which will tend to invite foreign invasion, or lead to internal disorder, will react by aggravating the poverty of the masses (*vide* the present condition of Central Europe). Measures on the other hand which will really strike at the root of this poverty will involve heavy and increasing expenditure by government.

The defect in our revenue policy, as I see it, has been in its tendency to leave an increasing share of the produce of land in large parts of India to inure to the benefit of a comparatively small class of land-owners. If instead of doing this it had been possible for government to continue to collect the increasing share of revenue remitted to the land-owners, and if government had then spent that share on the education of the people and the development of the country, the position of the masses would, I venture to say, be greatly better than it now is.

I am frankly of opinion that the present situation can only be remedied, in so far as the people of India realize the verities of responsible government. In these papers I have tried to show what to me those verities mean. The people of India will have to raise and spend for themselves much more revenue than is now spent on education and on development. But until education and development yield their economic fruits, that is to say, lead to greater production per head, most of the additional funds required will have to be raised by taxation of the share of land revenue which, under British administration, the zamindars have been allowed to keep for themselves. This, I know, is a hard saying; but I do not see where else it can come from. The cultivator is living too near the margin of subsistence to produce it. Theoretically, no doubt, he might do so if he reduced his expenditure on ceremonies, jewellery, or law-suits. But this will not happen for many generations, nor in any case until the education for which additional revenues are required has begun to modify his outlook.

The present attitude of Indian opinion on the subject is largely a *damnosa hereditas* of the days when the Company

cultivators (the great mass of the people) are living dangerously near the margin of subsistence, so near that an unfavourable season in any one area threatens that area with famine.

I further formed the opinion, for what it was worth, that a drastic diminution in the present cost of government would lead to results which would leave the masses not better but worse off than they now are. Theoretically, no doubt, he might do so if he reduced his expenditure on ceremonies, jewellery, or law-suits. But this will not happen for many generations, nor in any case until the education for which additional revenues are required has begun to modify his outlook.

The present attitude of Indian opinion on the subject is largely a *damnosa hereditas* of the days when the Company

began to look to the land revenues instead of to the profits of their trade, to swell the dividends of shareholders in England. That era, happily never a long one, was closed many years ago. But nothing short of responsible government will begin to bring home to a people the elementary truth that government revenue is the common stock of the people at large, and that government cannot remit revenue in favour of minorities except at the cost of the majority, unless there is positive waste which can be reduced to the same amount. One has only to turn to English newspapers to see how easily this truth is forgotten, even under a system of responsible government.

This study deals with :

A. The financial relations of the provincial government and the district boards.

B. The limits of self-government conceded to the boards.

C. Modifications of the proposals outlined in the letter to Mr. Bhupendra Nath Basu (III) as a result of the foregoing analysis and also of certain criticisms received. (*August 1917.*)

A

THE FINANCIAL RELATIONS OF THE PROVINCIAL GOVERNMENT AND THE DISTRICT BOARDS

§ 1. As we have seen in V, the principal revenues of the Government of India are based upon land settlements which take the form of periodic contracts between government and the landholder determined by minute statistical calculations. Except in the permanently settled areas there is, so to speak, a personal bargain between each several landholder and the government. Similarly, as explained in IV, the revenues allotted to each province are determined by bargains between the Government of India and each individual province; and these bargains are termed quasi-permanent settlements. We have now to see how the same method has also been applied to the financial relations of the provincial government of the United Provinces and the district boards. Financial relations in India are thus characterized by this principle of periodic bargain or settlement from top to bottom. It runs through the whole system.

§ 2. The district, as already observed, is comparable to an English county. The United Provinces, which contains a population of 48,000,000, is divided into 48 districts. Each of them, therefore, contains on the average one million souls, a population approximately equal to that of the whole Dominion of New Zealand. Several of them have populations more numerous than the European inhabitants of South Africa. This may help us to realize the magnitude of the social factors with which we are dealing.

1. The first part of the document is a letter from the President of the United States to the Congress, dated January 3, 1862. It is a very important document, as it contains the President's views on the state of the Union and the progress of the war. The President discusses the military situation, the economy, and the political climate. He also mentions the recent death of General Grant and the appointment of General Sherman.

2. The second part of the document is a report from the Secretary of War, dated January 10, 1862. It provides a detailed account of the military operations and the state of the army. The report mentions the recent battles of Fort Mifflin and Fort Mifflin, and the capture of the city of Fort Mifflin.

3. The third part of the document is a report from the Secretary of the Navy, dated January 15, 1862. It discusses the state of the navy and the progress of the fleet. The report mentions the recent capture of the ship "Albatross" and the appointment of Commodore Perry as the commander of the fleet. The report also discusses the state of the navy and the progress of the fleet.

4. The fourth part of the document is a report from the Secretary of the Interior, dated January 20, 1862. It discusses the state of the interior and the progress of the land office. The report mentions the recent discovery of gold in California and the appointment of General Sherman as the commander of the land office. The report also discusses the state of the interior and the progress of the land office.

A

THE FINANCIAL RELATIONS OF THE PROVINCIAL GOVERNMENT AND THE DISTRICT BOARDS

§ 1. As we have seen in V, the principal revenues of the Government of India are based upon land settlements which take the form of periodic contracts between government and the landholder determined by minute statistical calculations. Except in the permanently settled areas there is, so to speak, a personal bargain between each several landholder and the government. Similarly, as explained in IV, the revenues allotted to each province are determined by bargains between the Government of India and each individual province; and these bargains are termed quasi-permanent settlements. We have now to see how the same method has also been applied to the financial relations of the provincial government of the United Provinces and the district boards. Financial relations in India are thus characterized by this principle of periodic bargain or settlement from top to bottom. It runs through the whole system.

§ 2. The district, as already observed, is comparable to an English county. The United Provinces, which contains a population of 48,000,000, is divided into 48 districts. Each of them, therefore, contains on the average one million souls, a population approximately equal to that of the whole Dominion of New Zealand. Several of them have populations more numerous than the European inhabitants of South Africa. This may help us to realize the magnitude of the social factors with which we are dealing.

§ 3. As previously noted the revenues of the boards may be classed under three principal heads :

1. Revenues derived from a number of minor miscellaneous sources—
2. The cess on land—
3. Government grants.

The settlements, which govern the present financial relations of the provincial government with the district boards, were made in 1914. It will, therefore, be necessary to glance briefly at the arrangements which existed before that date.

Previous to the establishment of elective boards in the time of Lord Ripon, local cesses had been imposed on land, part of which were expended on village and road police by the provincial government, the rest being spent on schools, roads, and dispensaries by the district officer with the advice and assistance of a nominated district committee. These latter funds, subject to certain modifications made in 1878 and 1883, were handed over to the elective boards created by Lord Ripon.

By legislation which came into force in 1906 the various cesses were consolidated on the following lines. In the province of Agra boards were empowered to levy a cess on land not permanently settled up to 10 per cent. of the government revenue thereon. On land permanently settled the maximum was 2 annas per acre. The cost of village and road police was deducted by the government and the balance credited to the boards. In the province of Oudh the boards were empowered to levy a rate up to 5 per cent. of the government revenue on land. For the purpose of police, government might levy a further 6 per cent., but not more. The maximum cess is now levied in all districts with the exception of three in Oudh. These rates were payable by the landlords, who, generally speaking, were entitled to recover half of them from the tenants. Out of doles given by the Government of India, grants-in-aid were given to the boards equal to 25 per cent. of the cesses assigned to them.

§ 4. By legislation, which came into force in 1914, the following changes were made—

- (1) Throughout the Provinces of Agra and Oudh the maximum on areas not permanently settled, where exceeding 10 per cent., was reduced to 10 per cent.
- (2) The boards were relieved of the charges of police ; the cost being met by a fresh dole to the provincial govern-

the information needs of the community. The information needs of the community are the information needs of the community. The information needs of the community are the information needs of the community.

§ 3. As previously noted the revenues of the boards may be classed under three principal heads :

1. Revenues derived from a number of minor miscellaneous sources—
2. The cess on land—
3. Government grants.

The settlements, which govern the present financial relations of the provincial government with the district boards, were made in 1914. It will, therefore, be necessary to glance briefly at the arrangements which existed before that date.

Previous to the establishment of elective boards in the time of Lord Ripon, local cesses had been imposed on land, part of which were expended on village and road police by the provincial government, the rest being spent on schools, roads, and dispensaries by the district officer with the advice and assistance of a nominated district committee. These latter funds, subject to certain modifications made in 1878 and 1883, were handed over to the elective boards created by Lord Ripon.

By legislation which came into force in 1906 the various cesses were consolidated on the following lines. In the province of Agra boards were empowered to levy a cess on land not permanently settled up to 10 per cent. of the government revenue thereon. On land permanently settled the maximum was 2 annas per acre. The cost of village and road police was deducted by the government and the balance credited to the boards. In the province of Oudh the boards were empowered to levy a rate up to 5 per cent. of the government revenue on land. For the purpose of police, government might levy a further 6 per cent., but not more. The maximum cess is now levied in all districts with the exception of three in Oudh. These rates were payable by the landlords, who, generally speaking, were entitled to recover half of them from the tenants. Out of doles given by the Government of India, grants-in-aid were given to the boards equal to 25 per cent. of the cesses assigned to them.

§ 4. By legislation, which came into force in 1914, the following changes were made—

(1) Throughout the Provinces of Agra and Oudh the maximum on areas not permanently settled, where exceeding 10 per cent., was reduced to 10 per cent.

(2) The boards were relieved of the charges of police ; the cost being met by a fresh dole to the provincial govern-

ment from the Government of India. This meant that the total revenue of the boards from local sources (not including the government grant-in-aid) was increased by Rs. 31,35,760,¹ that being the amount previously deducted for police. The total funds then available for district boards were as follows—

From all local sources . . .	Rs. 88,52,819
Grant-in-aid . . .	„ 18,21,499
Total . . .	„ 106,74,318

§ 5. In view of this altered situation, government determined to redistribute this grant-in-aid of Rs. 18,21,499 in proportion to the needs of the various boards. The relative poverty or wealth of each district was to be gauged, and the government grant was to be distributed as an equalizing factor. With this end in view, new settlements were framed, which took the form of a contract with each board for a term of five years.

The settlements between the Government of India and those of the provinces have always been based upon previous expenditure by each of the provinces. The principal data used were, in fact, those contained in previous provincial budgets. Apart from these budgets little or no attempt was made to examine the actual needs of each province. These settlements must, therefore, permanently favour any provinces which were comparatively lavish in their expenditure before the settlements were made.

In framing the new district settlements of the United Provinces the government of these provinces relied on the figures shown in the estimates of the various boards only so far as minor items were concerned, such as the provision for pounds, demonstration farms, arboriculture, bulls, and stallions. No other data were used in attempting to arrive at a standard of expenditure which each board ought to incur under these heads.

With regard to the main items of expenditure, however, such an attempt was made. These items were as follows :

Medical relief.

Rural sanitation.

Vaccination.

Veterinary service.

¹ The Financial Secretary notes : ' The police charges were 32,31,000. By certain resummptions and adjustments of the grant-in-aid the net gain was reduced to 31,35,760.'

ment from the Government of India. This meant that the total revenue of the boards from local sources (not including the government grant-in-aid) was increased by Rs. 31,35,760,¹ that being the amount previously deducted for police. The total funds then available for district boards were as follows—

From all local sources . . .	Rs. 88,52,819
Grant-in-aid . . .	„ 18,21,499
Total . . .	„ 106,74,318

§ 5. In view of this altered situation, government determined to redistribute this grant-in-aid of Rs. 18,21,499 in proportion to the needs of the various boards. The relative poverty or wealth of each district was to be gauged, and the government grant was to be distributed as an equalizing factor. General administration, i.e. the cost of the Secretary and central office staff.

Public works department administration.

Unmetalled (kachcha) roads.

Metalled (pakka) roads.

Education.

The margin of annual expenditure available for buildings and other permanent works.

§ 6. Of these items three may be selected for the purpose of illustrating the various ways in which government endeavoured to arrive at a standard of the expenditure, which, taking into consideration the funds available, each board ought to incur for the service in question. The three specimens to be taken are medical relief, vaccination, and unmetalled roads.

With regard to medical relief, government after examining a mass of intricate data arrived at the conclusion that, a board ought to expend Rs. 19,000 on every 800,000 persons.

In the case of vaccination, government arrived at the conclusion that one vaccinator was required for every 65,000 to 75,000 persons, according to the density of population. Each vaccinator with the necessary lymph was estimated to cost Rs. 220. For the whole district a superintending officer at a salary of Rs. 450 was required. From these figures the standardized amount required for the proper vaccination of each district was worked out.

In the case of unmetalled roads, government ascertained the mileage of the roads of this class in each district. The cost of upkeep was estimated at Rs. 75 a mile. The multiplication of these two figures gave the standard of expenditure suggested for each district.

§ 7. Thus for the ten principal services government arrived at a standard of expenditure appropriate to each district. For the remaining heads the previous estimates of the boards were taken. In this way ideal estimates were constructed for each of the 48 boards. Government then looked to see how far this expenditure could be met by each board from revenues already assigned to it; that is to say, from the miscellaneous heads, and from the land cesses relieved of the charges for village police. They noted the deficit on the ideal estimates of each board, which would have to be met from the government grant of Rs. 18,21,499. This sum was distributed amongst the boards in such manner as to enable each of them to meet the deficit shown on the

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that this is crucial for ensuring transparency and accountability in the organization's operations.

2. The second part of the document outlines the specific procedures and protocols that must be followed when conducting financial transactions. This includes details on how to properly record income, expenses, and other financial data.

3. The third part of the document discusses the importance of regular audits and reviews to ensure that all financial data is accurate and up-to-date.

4. The fourth part of the document outlines the responsibilities of the various departments and individuals involved in the financial management process. This includes the accounting department, the finance department, and the management team.

5. The fifth part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that this is crucial for ensuring transparency and accountability in the organization's operations.

ideal estimates.¹ The government grant was, in fact, used as an equalizing factor.

§ 8. The term 'ideal' estimates has been used advisedly. It is only in the case of education and of metalled roads that the total standard expenditure must be made by the boards. Otherwise the boards are not tied down to the distribution of their funds between various services as shown on these estimates. With these two exceptions the ideal estimates are merely used as the statistical basis for distributing the government grant. On the other hand the annual estimates of each board must be approved by the commissioner, who can if he chooses, or if government desires, direct that the distribution of funds be revised so as to approximate more nearly to the standards shown in the schedules to the contract.

As in the case of the land and provincial settlements, this scheme was presented to each board in the form of a proposal for their acceptance. The proposals were accepted, and are thus referred to as 'contracts' between the provincial government and the district boards.

§ 9. It remains to be noted that boards can borrow from government, but not in the open market. Their funds, moreover, are subject to government audit.

§ 10. With one exception, to be noted presently, the jurisdiction of the district board is confined to rural areas. In towns the same functions, and some others besides, are undertaken by municipal boards. The financial settlements, above described, however, apply to district boards only. To the municipal boards certain grants are given in aid of education, but their financial relations with government are not determined by any general arrangement resembling the contracts with the district boards. It is believed, however, by the Administration that the grants given to the municipal boards do in practice secure a fair distribution of government funds between the urban and rural population.

¹ The Financial Secretary notes : ' To meet the deficit as far as possible. The grants were not adequate to meet the whole " ideal " estimates which were, however, unlikely to be realized within the term of the contract.'

ideal estimates.¹ The government grant was, in fact, used as an equalizing factor.

B

THE LIMITS OF SELF-GOVERNMENT CONCEDED TO
THE BOARDS

§ 11. The task of tracing the exact line which divides the functions assigned to boards from those reserved to government must now be attempted. Of these functions the most important is the administration of vernacular schools ; and in order to show what minor powers are conceded to the boards and what kind of major powers it is that government has reserved to itself, it will be necessary to describe the system in some detail.

§ 12. In dealing with vernacular education the word *board*, when used alone, must be taken to include municipal boards, for 'their duties and functions are precisely parallel, *mutatis mutandis*, to those of district boards'.¹ As a matter of fact, it is only in the larger towns that the municipal boards administer the vernacular schools. In smaller towns the municipal board hands over the administration of those schools to the district board together with a corresponding share of its revenues.

§ 13. In the year 1910 the backward state of primary education in the United Provinces was pressed on the notice of the provincial government by the report of the educational department and also by a resolution moved in the legislative council. Exhaustive inquiries were set on foot, the outcome of which was the appointment of a committee of officials and non-officials to consider and advise upon the curriculum for rural schools. A difference of opinion upon the language to be employed in the new readers resulted in a deadlock and the committee was unable to complete its labours. Meanwhile the educational department continued to press upon government its view that want of funds was largely responsible for the evil in question.

§ 14. A fresh impetus, however, was given to the movement by the debates in the Governor-General's Legislative Council on Mr. Gokhale's bill for providing compulsory education. The Government of India intervened with a declaration that the breaking down of illiteracy in India was henceforth to be the goal of educational policy.² On February 21, 1913, the Government of India issued a resolution covering the

Meanwhile the educational department continued to press upon government its view that want of funds was largely responsible for the evil in question.

§ 14. A fresh impetus, however, was given to the movement by the debates in the Governor-General's Legislative Council on Mr. Gokhale's bill for providing compulsory education. The Government of India intervened with a declaration that the breaking down of illiteracy in India was henceforth to be the goal of educational policy.² On February 21, 1913, the Government of India issued a resolution covering the

¹ p. 34, No. 1611 / XV—of 1909.

² General Report on Public Instruction in the United Provinces by the D.P.I., 18th October, 1916, p. 2.

whole field of education, and a promise was made that provincial governments would be assisted 'by means of large grants from imperial revenues as funds became available, to extend comprehensive systems of education in the several provinces'. In the following May the Lieutenant-Governor of the United Provinces issued a resolution pointing out the comparative backwardness of vernacular primary education in those provinces, enumerating the points at which improvement is desirable, and appointing a committee to advise the government thereon. The report of the committee was published in September 1913, and elicited a mass of comment in the press and from various conferences and leagues. A special committee of non-official Moham-medans was also appointed by the Lieutenant-Governor in April 1913 to consider the whole field of education affecting that community. Its report was presented in June 1914. Besides all this the records of many previous discussions were held in review. The detailed views of the director of public instruction were obtained on every point of importance. Finally it must be added that the views of the non-official members of the legislative council, as expressed in several discussions in that body, were before the government.

With all this varied material before him the Lieutenant-Governor sat down and recorded his decision upon the points at issue in a resolution dated August 25, 1914. The Educational Department then interpreted these decisions in a series of circulars issued to the boards whose duty it was to give effect to them.

§ 15. These crucial decisions, be it noted, were made by an administrative officer, and were not embodied in any statute submitted to the legislature. In the United Provinces there are Acts dealing with the University; but so far as primary and secondary education are concerned, there is nothing in the shape of an education Act. Decisions of policy are made by the Lieutenant-Governor, are expressed in a 'resolution', and are interpreted into orders and regulations framed by the educational department for the guidance of the authorities concerned. The system described in the following notes is the result of this process, and the description will aim at showing the limits within which the duty of arriving at minor decisions is delegated to the boards.

§ 16. To begin with we will confine ourselves to the system as applied to boys.

whole field of education, and a promise was made that provincial governments would be assisted 'by means of large grants from imperial revenues as funds became available, to extend comprehensive systems of education in the several provinces'. In the following May the Lieutenant-Governor of the United Provinces issued a resolution pointing out the comparative backwardness of vernacular primary education in those provinces, enumerating the points at which improvement is desirable, and appointing a committee to advise the government thereon. The report of the committee was published in September 1913, and elicited a mass of comment in the press and from various conferences and leagues. A special committee of non-official Moham-medans was also appointed by the Lieutenant-Governor in April 1913 to consider the whole field of education affecting that community. Its report was presented in June 1914. Besides all this the records of many previous discussions were held in review. The detailed views of the director of public instruction were obtained on every point of importance. Finally it must be added that the views of the non-official members of the legislative council, as expressed in several discussions in that body, were before the government.

With all this varied material before him the Lieutenant-Governor sat down and recorded his decision upon the points at issue in a resolution dated August 25, 1914. The Educational Department then interpreted these decisions in a series of circulars issued to the boards whose duty it was to give effect to them.

§ 15. These crucial decisions, be it noted, were made by an administrative officer, and were not embodied in any statute submitted to the legislature. In the United Provinces there are Acts dealing with the University; but so far as primary and secondary education are concerned, there is nothing in the shape of an education Act. Decisions of policy are made by the Lieutenant-Governor, are expressed in a 'resolution', and are interpreted into orders and regulations framed by the educational department for the guidance of the authorities concerned. The system described in the following notes is the result of this process, and the description will aim at showing the limits within which the duty of arriving at minor decisions is delegated to the boards.

§ 16. To begin with we will confine ourselves to the system as applied to boys.

When the Lieutenant-Governor issued this resolution the average daily attendance of boys at school was under 400,000. The practical aim presented to the boards for attainment in the near future was to raise this daily average to between 700,000 and 800,000.¹ When it is recalled that the present population of these provinces is 48,000,000, greater than that of the British Isles, the formidable problem of illiteracy which has to be faced will begin to be realized. But this is not the worst. Of those who do attend the primary schools no more than 10 per cent. leave at the age of twelve able to read a simple vernacular newspaper. Between 80 and 90 per cent. leave school at an earlier age and carry away nothing of lasting value. It is said that a large percentage of parents value the schools mainly as a creche which relieves them for several hours of the working day from the trouble of looking after their children.

Primary vernacular schools are attended by children from the age of five to the age of twelve. Most of these schools are provided by the board and may be described as board-schools. But grants-in-aid may be given to private schools, which are proved on inspection to conform to the standard laid down for the board-schools. These latter may be described as aided schools.

§ 17. For every board-school a local committee is supposed to be appointed by the collector or his sub-divisional officer. Committees are intended to stimulate interest amongst parents in primary education. Their functions are scarcely more than advisory; but in some districts, such as Allahabad, an attempt has recently been made to vest them with some executive functions. Aided schools are administered by a manager or managing committee. In general, it is said that committees evince small interest in their work.

§ 18. The aim of the primary school is that a boy should leave a vernacular primary school 'about the age of 12 able to read and write a letter, to understand simple prose, to make out the writing of a lease and of the patwari's papers, to keep simple accounts, to follow a map, and to work out an easy sum in interest'. Also it is hoped that the boy will know something of the easier passages in the poetic literature of his race.² The curriculum intended to produce this result includes reading, writing, arithmetic up to vulgar fractions, practice and interest, simple Indian accounts, geography of India in outline, and of the United Provinces

in detail, nature study, including dissection of flowers and fruits, and physical exercises.

§ 19. Efforts are being made to encourage boards to develop school gardens. Progress in this direction varies greatly. One of the most advanced districts is Allahabad, where it is reported that most of the schools now have gardens attached to them. The seeds of flowers, vegetables, staple crops, and new varieties are distributed for trial. With the exception of preliminary ploughing, all work is done by the teachers and pupils themselves. The cultivation of new varieties has been known to arouse widespread interest in the surrounding area. Several teachers have been given practical instruction at the Agricultural College of Cawnpore and at the Jumna mission farm. Two demonstration farms have been started in the Allahabad district by pupils of these institutions, one under the agricultural department, and the other under the superintendent of the head of Jumna mission farm. Several batches of teachers have been sent during vacations for short courses at this latter institution.

§ 20. The schools are commonly regarded by parents as a possible staircase, whereby some members of the family may emerge from agriculture, or the other subsidiary callings of village life to the dignity and affluence of *na'ukari* (service)—to what in England would be called 'wearing a black coat'. The Indian cultivator deals so little in cash that even the small salary paid to a government clerk or teacher appears to him magnificent. A rustic father in England is often ambitious to see his son wearing a black coat and drawing a salary, even though he never expects to share in his earnings. Parental affection is nowhere stronger than in India, but this motive is reinforced by the customs of the Hindu joint family. There is no poor law, and the maintenance of every member of a family is effectively recognized as a charge on the rest. All the members of a village family, who live for the most part on what they grow, feel they are gaining an important accretion of wealth if the earnings of one of them are all in the form of cash. If parents send one or more of the children to school, it is usually in the hope that they will presently rise to earn a salary. It is in the nature of a speculation, and, with the native caution of rustics, the majority of the sons are reserved to agriculture—the calling to which their parents are bred. The sons so reserved are seldom sent to school, for experience has taught parents in India, as in other parts of the world, that the curriculum provided in primary schools does, in

Abstract

in detail, nature study, including dissection of flowers and fruits, and physical exercises.

§ 19. Efforts are being made to encourage boards to develop school gardens. Progress in this direction varies greatly. One of the most advanced districts is Allahabad, where it is reported that most of the schools now have gardens attached to them. The seeds of flowers, vegetables, staple crops, and new varieties are distributed for trial. With the exception of preliminary ploughing, all work is done by the teachers and pupils themselves. The cultivation of new varieties has been known to arouse widespread interest in the surrounding area. Several teachers have been given practical instruction at the Agricultural College of Cawnpore and at the Jumna mission farm. Two demonstration farms have been started in the Allahabad district by pupils of these institutions, one under the agricultural department, and the other under the superintendent of the head of Jumna mission farm. Several batches of teachers have been sent during vacations for short courses at this latter institution.

§ 20. The schools are commonly regarded by parents as a possible staircase, whereby some members of the family may emerge from agriculture, or the other subsidiary callings of village life to the dignity and affluence of *naukari* (service)—to what in England would be called 'wearing a black coat'. The Indian cultivator deals so little in cash that even the small salary paid to a government clerk or teacher appears to him magnificent. A rustic father in England is often ambitious to see his son wearing a black coat and drawing a salary, even though he never expects to share in his earnings. Parental affection is nowhere stronger than in India, but this motive is reinforced by the customs of the Hindu joint family. There is no poor law, and the maintenance of every member of a family is effectively recognized as a charge on the rest. All the members of a village family, who live for the most part on what they grow, feel they are gaining an important accretion of wealth if the earnings of one of them are all in the form of cash. If parents send one or more of the children to school, it is usually in the hope that they will presently rise to earn a salary. It is in the nature of a speculation, and, with the native caution of rustics, the majority of the sons are reserved to agriculture—the calling to which their parents are bred. The sons so reserved are seldom sent to school, for experience has taught parents in India, as in other parts of the world, that the curriculum provided in primary schools does, in

fact, create a distaste for the cultivator's life. The evidence adduced on this subject in V is sufficient proof of the fact.

§ 21. The conference of experts who met at Pusa on the 4th and 5th February 1916 resolved 'that we should abandon any attempt to teach agriculture directly in primary schools'. In other words, they decided that it is not possible to give children any valuable knowledge with regard to practical agriculture in primary schools. That may or may not be the case. To impart practical knowledge is only the secondary object of education. The right formation of character is the primary object; and to do that is a question of giving a child the right tastes. Now can any system of education be sound in a country where the calling which a vast majority of the people must follow is agriculture, which produces a positive distaste for the cultivator's life? That primary curricula all over the world have produced and are producing this distaste is scarcely deniable. Parents, at any rate, who follow that calling are aware of it. Curricula are like medical treatments. It is not enough for a physician to show that his treatment has one particular and desirable effect on the patient's development. He must consider the reflex actions. The educational systems of Europe were first designed by clerks or bookmen. Craftsmen had no hand in them; and their development has remained in the hands of clerks and bookmen to the time of Macaulay, and, to an overwhelming extent, to the present age. There is no denying that reading, writing, and arithmetic are necessary keys to knowledge. No child who has not mastered them will become a really efficient agriculturist. But the problem how to teach children to read, write, and cypher, without rendering the prospect of a life spent in tillage unbearable to most of them, remains unsolved. And in India, if educationalists admit the problem at all, they are wont to say that it is insoluble. Yet clearly the wide extension of primary education in a country like India, where a vast proportion of the population must always subsist by agriculture, depends upon the solution. If once a system can be devised of teaching children to read, write, and cypher, accompanied by some other training which will foster instead of extinguishing the taste of a cultivator's child for his hereditary calling, the most formidable obstacle to a general extension of education to all the children of India will have been removed. The key to the problem will largely be found in such training of teachers as will give them not only some knowledge of, but a positive enthusiasm

The key to the problem will largely be found in such training of teachers as will give them not only some knowledge of, but a positive enthusiasm

for, cultivation. The school gardens of Allahabad may be taken as a sign that in some quarters the problem is not regarded as insoluble. Another is the memorable saying of the Lieutenant-Governor in the resolution to which frequent reference has been made. 'There are two definite objects, which it is the clear duty of the Government to ensure that its primary schools shall fulfil. On the one hand they must not be so designed as necessarily to make the pupils discontented with, and averse from pursuing, their ancestral callings—which, with the vast majority, are all that they can possibly look to for their maintenance in life. On the other hand, they must give the boys such an education as will have a lasting influence on their intelligence and will equip them better for their work in the world. Any system of primary education which fails in these respects is either treachery to the people or the gravest waste of their money, or both.'

§ 22. Another statement of educational ideals from the pen of an expert, to whose assistance I am deeply indebted in the compilation of these notes, deserves to be quoted. 'I prefer to plod on', he writes, 'in the task of opening the minds and broadening the outlook of young agriculturists. By so doing I can at least help them "to save their souls alive".' Here is an ideal far higher than that which has cursed and sterilized education in England, that of enabling a child to earn his living. But none the less, the saying leaps to the mind that 'he that seeks to save his soul shall lose it'. In England people of the upper class who have several sons often feel they have discharged their duty to the state when they have sent one or two of them into the army or the navy. For the country's sake they are prepared that some of their sons should live comparatively poor, and die at a moment's notice when called upon to do so. The rest of the family is then destined for agriculture, business, or manufacture, with the avowed object of making money. In the first case their object is largely social, in the second mainly individualistic. It scarcely occurs to them to teach their children that farming, trade, or manufacture are public services as necessary as fighting, and can be approached in the same spirit. It is the simple truth that to give a child the idea that all work whatsoever that is worth doing must be undertaken as a public service is the only true way of opening his mind and saving his soul. To do that in England is comparatively easy because the soul of every child capable of true education can be made to vibrate

It is the simple truth that to give a child the idea that all work whatsoever that is worth doing must be undertaken as a public service is the only true way of opening his mind and saving his soul. To do that in England is comparatively easy because the soul of every child capable of true education can be made to vibrate

to the call of something to be done for his country's sake. A sense of nationalism is the only possible basis for any true system of national training; for you cannot save a child's soul by teaching him to live for himself. Herein lies the key to the marvellous regeneration of Japan. The students who effected it were the men who sought knowledge not as a means to a livelihood, but rather that a new candle might be lit in Japan. The feelings which the word 'Motherland' is beginning to stir in Indian minds, is the earnest of a new and living educational movement. The flax is smoking and it is for the wisdom of rulers to breathe on it, in the faith that a new candle in India may be kindled thereby. There is hope for her whenever the hearts of her children begin to burn with that fire. Then, and then only, can the teacher suggest that a service to the Motherland can be rendered by the humblest of her sons worthy as any to be found in government employment. For not until her wealth is increased and placed in larger measure at the public service can India hope to advance. A necessary condition of progress is that labour applied to land shall yield a richer increase because the labour is made more fruitful by knowledge. The pursuit of an ideal brings in its train the material results necessary to achievement. The pursuit of material results for their own sake always ends by defeating itself. Man cannot live by bread alone. By nationalism only can the soul of a people be saved, and whenever a true Indian nationalism has been realized the first step will have been taken towards the higher patriotism of the wider Commonwealth.¹

¹ A European, not an official, notes: 'It is a poor soul-saving religion, this of nationalism at the best. Besides the conception of a "Motherland" is alien to the conception of the masses in India, and with the agitator the cry "Vande Mataram" is not a cry of devotion but a note of defiance, just as "God save Ireland" being interpreted means "To Hell with England"'. There is certainly no *educational* salvation in Indian nationalism. You will find the Indian nationalist, in spite of loud pretensions, the deadly opponent of all genuine educational effort. He is out for the cheap and nasty, the pretence not the performance, every time. The fact that "expert", "efficiency-monger" are terms of abuse applied by the politician to the genuine educational reformer gives one the measure of his interest in education. If you are looking to education to justify responsible government, or to responsible government to promote education, you are building on sand. A good deal has been attempted and something done in Madras for education, higher and lower, in recent years, but it is not too much to say that all the initiative and all the driving power has been supplied by Englishmen. Saner Indians, not politicians, have co-operated and approved, but the policy of the "Nationalist" at every stage has been to misrepresent and oppose. Take

The problem of creating a system of primary education such as will have a lasting influence on character and intelligence, but will not make the children of cultivators averse from pursuing their ancestral calling, is by all measures the greatest which has to be faced in India to-day.

§ 23. Such then is the curriculum prescribed for boys from the age of five to twelve. It is the board's duty to see that schools where it is taught are established on the average for every twenty-five square miles of their district. The principle is that this teaching shall be available to every child at schools within three miles of his home. This average area of twenty-five square miles is the unit of the primary system. The typical unit consists of one primary vernacular school, divided into the following classes :

A)	I	III
B)	II	IV
for infants.		

Classes A and B may each contain as many as forty boys while I to IV are limited to thirty each. There is, if possible, to be one teacher for each class ; but in no case is one teacher to take more than two, and there must not be more than thirty pupils between the two.

§ 24. Besides the school teaching up to class IV, there is usually one or more preparatory schools which include only classes A, B, I, and II. The Lieutenant-Governor directed that these schools should be treated as branches of a primary school in the neighbourhood, and should be supervised by the head teacher of that school. In each 25 square mile unit there is supposed to be provision for 200 boys, whether in one primary vernacular school alone, or else in one such school together with one or more preparatory schools attached thereto. Some approximation to this standard is said to have been attained.

§ 25. The last eighteen years which preceded 1914 witnessed a large and disturbing decline in the proportion of Mohammedan schools. Efforts are being made to check the decline and to revive the traditional Moslem schools. Wherever enough Mohammedan parents come forward to guarantee a minimum attendance of twenty boys the board is directed to start a special Islamia school and provide it with a Mohammedan teacher. If a school of a more definitely religious type is required, Mohammedan parents may away European predominance in the universities and the Educational Department and you bid farewell to any prospect of educational advance in this country.

■ **How to use this book** This book is designed to be used in a number of ways. It can be used as a textbook for a course in statistics, or as a reference book for those who need to know more about statistics. It can also be used as a self-study guide for those who are interested in learning more about statistics. The book is divided into two main parts: the first part covers the basics of statistics, and the second part covers more advanced topics. Each part is further divided into chapters, and each chapter contains a number of sections. The book is written in a clear and concise style, and it includes many examples and exercises to help you understand the concepts.

1. The first step is to identify the problem. This involves understanding the current situation and what needs to be improved.

[illegible]

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

establish a maktab, which the board may assist with a grant-in-aid. In like manner grants-in-aid may be given to the pathshalas, the traditional school of the Hindu. Assistance may also be given by the board to schools started for 'untouchables' by missionary and other philanthropic agencies.

§ 26. Fees, ranging from one-half anna to four annas a month, are charged. These, however, may be excused on the ground of poverty. Free scholars must not exceed 25 per cent. of those attending the school and usually average about 20 per cent. The list of exemptions is settled by the committee, or, failing the committee, by the head teacher, and is checked by the inspectorial staff of the board.

§ 27. The teachers' pay is supposed to be governed by a scale laid down by the government; but in practice there is hardly a board which has been able to put it into complete operation for want of funds. The majority of teachers are paid at rates lower than the government standard. An annual scheme is prepared for submission to each board by the deputy inspector, and is checked by the inspector of the division. The board is responsible for the teacher's salary in the board school.

§ 28. In continuation of the primary schools are the secondary vernacular schools for boys from ten to fifteen years of age. Scholarships of Rs. 2 a month for three years are awarded to boys of the primary schools for admission to the secondary schools, an amount more than enough to cover the expenses of a day boy, but less than enough for those of a boarder. There are usually four to six of these secondary schools in each district, roughly, that is to say, one in each tahsil. They are often described as tahsil schools.

§ 29. The secondary school provides teaching in three classes, Nos. V, VI, and VII. The curriculum includes arithmetic up to decimal fractions, simple and compound proportion, proportional parts, profit and loss, square root, British weights and measures, measurement of area, of a rectangle, and of volume; of a rectangular solid, &c.; elementary geometry, elementary Indian history, physical geography, and the geography of the world in outline. Sometimes there is nature study. For Hindu children there is reading in the Hindi classics, and the study of the Urdu language up to the full primary standard. For Mohammedan boys there is reading in the Urdu classics

and study of Hindi up to the full primary standard. But in either case drawing may be taken as an alternative to the second vernacular. There are usually no local committees for tahsil schools.

§ 30. From these schools boys go up for the vernacular final examination, for which a number of candidates also present themselves from Rajputana and adjacent Native States. In 1916 there were 13,029 candidates of whom 7,689 passed.

§ 31. The next step in the educational ladder is the 'English school', in which English is first taught as a subject and in the higher classes is used as the medium of instruction. Formerly these schools were under the boards. But the boards had difficulty in recruiting teachers and in managing the schools, and the English schools were taken back under the control of the educational department. But a few words must be said with regard to them here in order to complete the account of the vernacular system. There is usually one English school in each district. It covers classes III to X. In classes III to VII the medium of instruction is the vernacular, but English is taught as a subject. In classes VIII to X English begins to be used as the medium of instruction. In these schools boys are taught up to the age of 17 or 18. Scholarships at the English school are awarded both by the educational department and by the boards to boys from the vernacular schools.

Boys who have passed the vernacular final examination go into classes VI and VII of the English school. But as they start with no knowledge of English two special classes are provided for them at this stage in which they can learn the elements of that language, and so get on to a footing of equality in this study with those who have passed through classes III to V of the English school.

It is stated that boys in classes VI and VII of the vernacular secondary school are in advance of boys in the same classes of the English school. Some of the best pupils in the 'English school' are those which come up with scholarships from the vernacular schools, and they are observed to make better progress than boys who start in the English school. The natural conclusion is that children make better progress when taught in their own language than in a foreign tongue.¹ An Englishman will more readily

¹ The head of a training college notes: 'This conclusion overlooks the fact that the boys who come to the English school from the middle vernacular school are a double distillate: only the more industrious and

and study of Hindi up to the full primary standard. But in either case drawing may be taken as an alternative to the second vernacular. There are usually no local committees for tahsil schools.

§ 30. From these schools boys go up for the vernacular final examination, for which a number of candidates also present themselves from Rajputana and adjacent Native States. In 1916 there were 13,029 candidates of whom 7,689 passed.

§ 31. The next step in the educational ladder is the 'English school', in which English is first taught as a subject and in the higher classes is used as the medium of instruction. Formerly these schools were under the boards. But the boards had difficulty in recruiting teachers and in managing the schools, and the English schools were taken back under the control of the educational department. But a few words must be said with regard to them here in order to complete the account of the vernacular system. There is usually one English school in each district. It covers classes III to X. In classes III to VII the medium of instruction is the vernacular, but English is taught as a subject. In classes VIII to X English begins to be used as the medium of instruction. In these schools boys are taught up to the age of 17 or 18. Scholarships at the English school are awarded both by the educational department and by the boards to boys from the vernacular schools.

Boys who have passed the vernacular final examination go into classes VI and VII of the English school. But as they start with no knowledge of English two special classes are provided for them at this stage in which they can learn the elements of that language, and so get on to a footing of equality in this study with those who have passed through classes III to V of the English school.

It is stated that boys in classes VI and VII of the vernacular secondary school are in advance of boys in the same classes of the English school. Some of the best pupils in the 'English school' are those which come up with scholarships from the vernacular schools, and they are observed to make better progress than boys who start in the English school. The natural conclusion is that children make better progress when taught in their own language than in a foreign tongue.¹ An Englishman will more readily

¹ The head of a training college notes: 'This conclusion overlooks the fact that the boys who come to the English school from the middle vernacular school are a double distillate: only the more industrious and

understand this by imagining what his own experience would have been, if he had first, as a child, been required to learn Urdu as a subject, and if from about fourteen years of age Urdu had been used as the vehicle of instruction instead of his own language. Yet in India the popular demand is for more 'English schools' rather than for more vernacular schools. And, strange as this fact may seem to an observer familiar with conditions in Ireland, Canada, or South Africa, the reason is obvious. In a polyglot country like India, English is of necessity the language of government, of the law courts, of the learned professions, and of all the higher branches of business. Without a knowledge of English an Indian boy can scarcely rise from the station in which he is born. More English education will, therefore, continue to be the insistent demand of all those in India who hope to see their children rise above the station which they themselves have filled.¹

§ 32. Before leaving the subject of primary vernacular education, a word must be said with regard to the teaching

ambitious boys of the primary school go to the middle vernacular school, and only the more industrious and ambitious boys of the middle vernacular school find their way to the English school. You are comparing the progress of the picked boys of the country with that of the average boys of the town. My experience is that the former are better than the latter, but are not equal to the best of the boys who start their education in an English school.'

¹ A commissioner notes : ' I once asked a scholarly Indian very prominently connected with the Central Hindu College at Benares why it was that all educated Indians were so keen on the study of English although most of them insisted on the superiority of Hindu ethics and religion and on the great past of Hindu civilization. His reply was that English literature emancipated the mind from the shackles of the past and that there was nothing of the sort in the ancient Indian literature, which would only operate to keep the minds of Indians in fetters.

' I believe that this reason has just as much if not more effect on the preference of Indians for an English education than the strictly utilitarian explanation given in the text.'

The head of a training college notes : ' English is more than this. It is of necessity the vehicle of Western knowledge. The vernaculars, Urdu and Hindi, have not a vocabulary which can express any but the simplest abstract ideas. When a Muhammadan writer translates even a school history he has to use Persian words in order to describe the character of a ruler ; a Hindu writer has to use Sanskrit words : these words are as strange to the Indian boy as are English words, and they are often only approximations to the meaning. When it comes to conveying through the vernaculars the ideas of Western philosophy or science even Persian and Sanskrit words fail the translator, for these ideas have never been expressed in Persian or Sanskrit. You cannot equate words in one language with words in another unless the two peoples who use these languages have ideas in common.'

of girls. This in the United Provinces is in the most backward state, especially amongst Mohammedans. The causes which are operating against progress are summarized as follows :

- (1) Prejudice and apathy of the masses.
- (2) No expectation of pecuniary gain in educating girls as there is in educating boys.
- (3) Long-standing Indian custom to disregard the education of women.
- (4) Strict regard for purdah and fear of its ultimate collapse.
- (5) Poverty.
- (6) Paucity of qualified lady teachers.
- (7) Above all, the unsuitability and uselessness of the subjects taught in girls' schools.

To these causes must be added one other—the early marriage and motherhood of girls. It is a common experience for a girl of the age of twelve or even younger to leave school for her confinement. In India, unless girls are married as children, they are scarcely likely to marry at all ; and this all over the East is regarded as the greatest misfortune which can overtake a woman.

The policy of Government in dealing with this problem is stated as follows : It is advisable that Government, while not shrinking from its responsibilities in promoting female education, and not hesitating to take the initiative in areas where development would be otherwise indefinitely postponed, should follow and aid private enterprise rather than embark on delicate experiments with the risk of running counter to prejudices, the extent and strength of which it is difficult to gauge.¹

The report goes on to explain that responsibility for female education is to be divided between government and the boards on the following lines :

The Government will, for the present at least, retain ordinarily one exemplar school in each district, for the purpose of setting the standard and even more for the all-important object of keeping control over the supply of efficient teachers. The further development of female education will have to be carried out by the boards themselves with their own resources, supplemented by such assistance, for specific purposes and on defined conditions, as the provincial Government may be able to afford. The ordinary business of the board will be to help and encourage private institutions which provide efficient primary teaching, where such institutions exist or can be induced to start. Where they cannot be called into being or where they are inadequate to the local demand, the board must

lead the way and open schools of its own. The guide to the location of the boards' schools will have to be largely the expressed wishes of the people themselves, and the limit to their numbers will have to be the boards' resources. It may be accepted as a general principle that if, in any town or village, a committee or group of parents come forward to provide temporary accommodation and guarantee an attendance of at least twenty girls, the board should equip the school and appoint a qualified mistress. If the school becomes an established success, a permanent building for it may be subsequently erected; but in ordinary course the desirability of the guarantee should be tested for at least three years. The provision of funds, both for this purpose and for the liberal aiding of private schools, will be a matter for subsequent determination between the Local Government and the boards.¹

§ 33. With this description of the system before us, we are now in a position to understand the most difficult of the controversies which government was called upon to settle in 1914, that relating to the exact character of the vernacular which was to form the medium of education in the schools administered by the boards.

Before the Mohammedan invasions from the north the principal language of these provinces was Hindi, a language closely allied to the ancient Sanscrit, closely associated therefore with Hinduism, and written in the Nagari script. For the purpose of administration the Mohammedans took many words of Hindi and compounded them with many Persian and Arabic words of their own. The result was Hindustani, the language of administration, of the camp and matters of everyday life; and this language was written both in the Persian and also in the Nagari script. The result was a *lingua franca*, which, though written by Hindus in the Nagari and by Mohammedans in the Persian character, is in conversation available to both for the limited purposes of ordinary life. For literary expression, or for the purpose of rational discussion, whether of politics, religion, or morals, the Hindu resorts to Hindi words, while the Mohammedan on the other hand uses Urdu words of Persian and Arabic origin. Thus it is only for the most ordinary purposes that Hindus and Mohammedans converse in a common language. For all higher purposes the one converses in Hindi and the other in Urdu; and each is written in a different script.²

§ 34. These conditions occasion no serious problem in the earlier stages of a child's education. So long as teaching is confined to simple words and ideas the common basis of Hindustani provides all that is needed. The text-books can be printed in both the Nagari and Persian scripts, the children of Hindus and Mohammedans can thus learn to read either or both. But when the child begins to pass beyond the stage of simple words and ideas, the restricted vocabulary and the simplified grammar of Hindustani begin to break down, and his teaching must be given and his text-books must be worded more and more either in Hindi or else in Urdu. The choice raises the whole issue between the two religions. A similar position might easily have arisen in the south-east of Europe, where members of the Latin and Greek churches mix. Such a population might have evolved a mixed patois of Greek and Latin words for the purpose of ordinary conversation. But the moment that education had reached a certain point, parents of the Roman religion would wish to have their children taught in the language of Latin origin in which the liturgies of their Church were expressed, while those of the Greek Church would wish their children to be instructed in the Greek tongue.¹

§ 35. In either religion are extremists who would, if they could, secure a decision in favour of the language of their own religion, and the suppression of the other language as a medium of education. No reasonable person is likely to listen to such views ; and, therefore, the practical question arises whether the bifurcation into Hindi by Hindu children and into Urdu by Mohammedan children is to take place before the stage of vernacular education, as provided by government, is passed, and, if so, at what point. In 1876, and again in 1903, the government of the United Provinces tried to solve the problem by insisting on the policy of prescribing readers in the limited common language. As noted in an earlier page, a committee was appointed in 1910 to draw up a scheme for the preparation of new readers, and a majority of the members 'held that in higher readers some simple passages of literary merit should be interspersed with lessons written in the common language, and that such passages must of necessity be in distinctive Urdu or Hindi'.²

¹ Report of the D. P. I. for the year ending March 31, 1916, p. 2.

² A European educationalist notes : 'I was a member of the 1910 committee which was wrecked on the "language question". I wondered why it was that Hindus wished to have the bifurcation in the Primary

The government, however, adhered to its previous position, and dissolved the committee. In the next four years the whole position was explored by several committees and became the subject of wide discussion. From these discussions emerged a distinct preponderance of opinion in favour of bifurcation before the child had passed the stage of class IV. But as to the exact point at which the bifurcation should begin, and as to the way in which the text-books should be prepared, a variety of different schemes were produced. Obviously the question was one which admitted of settlement in a great variety of different ways, each of which might be regarded as more or less favourable to either of the rival religions.

§ 36. With all this mass of varied opinions before him, the Lieutenant-Governor sat down in 1914 to decide the question. He began by stating the principles upon which he proposed to base his decision as follows:

The conclusions of the Lieutenant-Governor then are that—

- (a) The common or Hindustani language, printed in either Persian or Nagari type, should be used in the primary readers, so long as it has anything to teach.
- (b) When the common language has nothing more to teach, the pupil should learn to read Urdu or Hindi according to the wish of his parents;
- (c) The readers printed in the common language and used up to the end of class IV do not allow the pupil to leave his primary school with that mental equipment which it is desired to give him.

In other words, while His Honour accepts the policy of teaching the common language so long as possible, he believes that bifurcation may be deferred too long. At present, in his opinion, it is unduly deferred, and valuable time is lost in reading and re-reading a primer when it has ceased to serve any purpose as a means of progressive education. He considers, therefore, that bifurcation should begin a little earlier than is now the case. Primers on the lines of those now in use, printed in either character, should be retained for

School whereas Muhammadans wished to retain the "common language" there. I discussed the question with Hindu and Muhammadan friends, but I never got an explanation more illuminating than that the question was a "political" one. I was inclined to think that the reason was that Hindi has a literature whereas there is no Urdu literature worthy of the name, and that the Muhammadans feared that in time their language—the one without a literature—would be displaced by Hindi, the language with a literature. I put the question to an eminent Hindi scholar—a European—and his opinion was, as you say, that the issue was one between the two religions: in Hindi there is a book—the Ramayana—whereas in Urdu there is no book.'

The government, however, adhered to its previous position, and dissolved the committee. In the next four years the whole position was explored by several committees and became the subject of wide discussion. classes I and II; and there is also required for use above those classes, what for brevity may be designated a senior reader in the common language, similarly printed, and graduated in difficulty, so far as possible, from the beginning onwards. All these books should contain lessons in prose only. When the teacher is satisfied that a class has mastered the senior reader, he should at once promote them to one of two supplementary readers. Such promotion would not ordinarily come until the end of class III, and may even be later according to the capacity of the pupils. The sole test should be whether the class has mastered all that it can learn from the senior reader; and it is for the master, and the master alone, to say when this happens; but it should usually be possible for the last half of the year in class IV to be spent on the supplementary readers. These should be composed in distinctive Urdu and Hindi respectively. They should contain both prose and verse, taken as far as possible from standard authors; but religious and didactic passages should be avoided, so as to respect the sensibilities of Hindus who may be taking Urdu, or Mohammedans who may be reading the Hindi course. The preparation of the supplementary readers should be undertaken, as soon as possible, by the Provincial Text-Book Committee, who will have the advantage of studying the readers which were drafted by the committee presided over by Pandit Rama Shankar.

The course of study thus indicated will, Sir James Meston trusts, maintain the principle of elementary teaching in a simple common language so long as such teaching has an educative value; while it will ensure that the pupil leaves class IV with an education which will not only be of practical value to him in after-life, but will also open for him the door to the literature of his religion and his ancestors. This was, he feels sure, the aim of all the members of Mr. Justice Pigott's Committee, though the attempt at reconciling divergent views led to a form of compromise which would have presented difficulties in practice. The alternative he has decided to adopt will, he believes, not prove open to this objection; but he does not pretend to hope that it will please all schools of thought. *The question has reached a point where mutual concessions seem impossible, and it is clearly the duty of the Government to formulate a decision, making the interests of the child its sole consideration and the progress of sound education its only aim.* To this decision there is one corollary of first importance, viz. that every private school must be equipped, with the least possible delay, with masters who can and will teach the new curriculum. It will be the care of district boards to see that these are provided, and of the department of Education to ensure that every future teacher is thoroughly instructed in both characters and in the intelligent use of both the supplementary readers.¹

¹ Lieutenant-Governor's Resolution of August 25, 1914, p. 25.

¹ Lieutenant-Governor's Resolution of August 25, 1914, p. 25.

§ 37. For the training of teachers for the vernacular schools provision is made as follows. The educational department maintains normal schools, and roughly there is one for each of the ten divisions of the province. The heads of these schools and two or three assistants are men who have attended the university and have been trained in an English training college, i. e. a college which trains teachers for English teaching schools. The rest of the staff are men who have had only a vernacular education and have themselves been trained in a normal school. But all work at the normal school is done in the vernacular. To the normal school for each division each district board sends about six teachers a year for a two years' course. For each division about forty certificated teachers a year are produced by each normal school. From these teachers the secondary vernacular schools are staffed, and head teachers are provided for all primary schools. The certificate is provisional until the holder has served satisfactorily as an actual teacher in a recognized school.

Special grants, not included in the settlements, are also given to the boards for maintaining training classes for teachers. These classes were, till recently, attached to the secondary vernacular schools maintained at the centre of each tahsil. They contain from six to eight students, and the primary schools are used as their training grounds. Their course covers one year and certificates are awarded by the department.

The best youths who have taken the vernacular final certificate are selected for the normal schools. The next best are sent to the training classes. All of them are paid small stipends during their training. But a great number of teachers in the primary schools have still merely passed the vernacular final examination, and have had no special training as teachers.

For the training of female teachers the boards have no responsibility. They are trained in special classes attached to the model or exemplar girls' schools maintained by the educational department in each district. They are also trained in the girls' normal schools in Lucknow and Bareilly, and certificates are awarded by the department. Others are trained in aided schools maintained by missions which pay special attention to female education.¹

¹ The head of a training college notes: 'The following facts regarding the supply of trained teachers for vernacular schools in the United Provinces may be of interest:

the economy. The model is a dynamic system of four equations, which are solved simultaneously. The first equation is the demand function, which is derived from the utility maximization problem. The second equation is the supply function, which is derived from the profit maximization problem. The third equation is the market clearing condition, which states that the quantity demanded must equal the quantity supplied. The fourth equation is the law of motion for the capital stock, which states that the capital stock in period $t+1$ is equal to the capital stock in period t plus the investment in period t minus the depreciation of the capital stock in period t . The model is solved by the method of successive approximations. The initial values of the variables are chosen such that the system is stable. The model is solved for a steady state, which is a point where the variables are constant over time. The steady state values of the variables are then used to calculate the long-run growth rate of the economy.

The steady state values of the variables are then used to calculate the long-run growth rate of the economy.

§ 37. For the training of teachers for the vernacular schools provision is made as follows. The educational department maintains normal schools, and roughly there is one for each of the ten divisions of the province. The heads of these schools and two or three assistants are men who have attended the university and have been trained in an English training college, i. e. a college which trains teachers for English teaching schools. The rest of the staff are men who have had only a vernacular education and have themselves been trained in a normal school. But all work at the normal school is done in the vernacular. To the normal school for each division each district board sends about six teachers a year for a two years' course. For each division about forty certificated teachers a year are produced by each normal school. From these teachers the secondary vernacular schools are staffed, and head teachers are provided for all primary schools. The certificate is provisional until the holder has served satisfactorily as an actual teacher in a recognized school.

Special grants, not included in the settlements, are also given to the boards for maintaining training classes for teachers. These classes were, till recently, attached to the secondary vernacular schools maintained at the centre of each tahsil. They contain from six to eight students, and the primary schools are used as their training grounds. Their course covers one year and certificates are awarded by the department.

The best youths who have taken the vernacular final certificate are selected for the normal schools. The next best are sent to the training classes. All of them are paid small stipends during their training. But a great number of teachers in the primary schools have still merely passed the vernacular final examination, and have had no special training as teachers.

For the training of female teachers the boards have no responsibility. They are trained in special classes attached to the model or exemplar girls' schools maintained by the educational department in each district. They are also trained in the girls' normal schools in Lucknow and Bareilly, and certificates are awarded by the department. Others are trained in aided schools maintained by missions which pay special attention to female education.¹

¹ The head of a training college notes: 'The following facts regarding the supply of trained teachers for vernacular schools in the United Provinces may be of interest:

§ 38. The teachers' work in the schools is supervised by inspectors who are officers of the educational department. There is one inspector for each of the ten divisions. Of these, at the present moment, six are Indians. Five years ago there were nine divisions with five European inspectors and four Indians. In addition to these inspectors there is one Mohammedan inspector specially charged with the duty of promoting the education of Moslems throughout the province. This inspector is assisted by a Mohammedan deputy inspector for each division.

For each district there is one deputy inspector, and, roughly speaking, for each tahsil one sub-deputy inspector. These officials are always Indians. As noted in IV they are servants of the educational department placed at the disposal of the boards. They inspect the schools of the district for the board and administer them. Their reports go to the board, not to the inspector, except in the case of tahsil schools, their reports whereon go to the chairman of the board through the inspector. In the words of article 28 of the educational code: 'While under the direct control of the inspector, district inspecting officers are, in matters relating to the administration of vernacular education, the assistants of the chairman of the district board, and subject to his general control.' He is in practice the servant of the board, and the inspector has comparatively very little

'VERNAACULAR BOYS' SCHOOLS:

Demand. The total number of teachers on the 31st March, 1917, was approximately 24,000, of whom 11,000 were trained. The annual wastage (due to death, retirement, &c.) may be estimated at 6 per cent. of 24,000, i. e. 1,400 approximately. To provide for expansion in accordance with the estimate of the Lieutenant-Governor's Resolution of 25th August, 1914, 1,000 new teachers are required annually. Thus the present demand for trained teachers is 1,400 (for wastage) plus 1,000 (for expansion), i. e. 2,400 per annum.

Supply. The supply at present is 300 (from Normal Schools) plus 1,630 (from Training Classes), i. e. a total of 1,930. Hence the present output of trained teachers is deficient by about 20 per cent. of the demand for new teachers.

'VERNAACULAR GIRLS' SCHOOLS:

Demand. On the 31st March, 1917, there were 1,896 teachers employed in vernacular schools for girls; of these only 240 were trained. The wastage in the case of women teachers is higher than in the case of men; it may be estimated at 10 per cent. Thus, apart from any allowance for expansion, the demand for trained women teachers to replace wastage is about 190 per annum.

Supply. The total enrolment in training classes for training teachers for vernacular girls' schools was 150 in 1916-17. The course of training is for two years. The number who passed the examination in 1917 was only 35.

§ 38. The teachers' work in the schools is supervised by inspectors who are officers of the educational department. There is one inspector for each of the ten divisions. Of these, at the present moment, six are Indians. Five years ago there were nine divisions with five European inspectors and four Indians. to do with him. The deputy cannot correspond directly with the inspector, except on certain prescribed topics such as curricula, examinations, &c. The deputy is practically held responsible for the state of education in his district.

The schools are also subject to inspection as to buildings, equipment, attendance of children, and teachers and general administration, but not as to the teaching given, by the district officer and his subordinates. The reports go to the office of the board but not to the educational department.

§ 39. So far as primary vernacular education is concerned the educational department is assisted by an advisory body known as the Board of Education. All kinds of people with special experience are called from time to time to sit on this body, but the director and assistant director of public instruction, the chief inspector of girls' schools and the inspector of Mohammedan schools are always members. Amongst other things it discusses English schools for girls, schools of the secondary type, and the education of the depressed classes. The results go to government in the form of advice. Besides this, frequent special committees are convened to advise upon such subjects as the congestion of schools. Through these various agencies the educational department is kept in touch with public feeling.

§ 40. From the foregoing summary the nature of the functions and revenues delegated to elective boards will be sufficiently clear. It is left to the boards to decide where to open new schools, where to close schools, where to aid them, how to staff them, how to train the staff, where to build new buildings, how to build them, and so on. In many of these matters they are required to satisfy certain minima conditions laid down by the local self-government board or the educational department. The marked variations in progress between one district and another is some index of how much depends upon the zeal and energy of the individual boards.

§ 41. One point which seems to throw some light on the problems which form the subject of this inquiry remains to be noticed. 'It seems unfortunately true that in these provinces primary education is less efficient in municipal areas than it is in rural areas.'¹ Here again the results in India are contrary to those experienced in other parts of the world. The explanations given of this state of affairs are as follows. The rules made under the District Board Act

¹ Lieutenant-Governor's Resolution of August 25, 1914, p. 35.

§ 41. One point which seems to throw some light on the problems which form the subject of this inquiry remains to be noticed. 'It seems unfortunately true that in these provinces primary education is less efficient in municipal areas than it is in rural areas.'¹ Here again the results in India are contrary to those experienced in other parts of the world. The explanations given of this state of affairs are as follows. The rules made under the District Board Act

¹ Lieutenant-Governor's Resolution of August 25, 1914, p. 35.

give the district boards little scope for going astray. Municipal boards are left much freer. Their finances are more elastic, and it is the avowed intention of government to give them as much freedom from control as possible. The members belong almost exclusively to the middle classes, and their real interest lies in providing facilities for English education. They are, not unnaturally, keener about the education of their own children than about that of classes of a lower status. The result has been that very little has been spent on developing primary schools (which are more expensive in cities) and the expenditure has not been well directed. The municipal boards, moreover, have largely relied for inspection on their own officers or members. Municipal boards will in future be assisted by grants to enable them to employ qualified supervising officers of their own, and they will at the same time be more adequately supervised by government inspectors.¹ Another reason suggested is that the personal influence of the district officers and their deputies is greater in rural districts than in cities. As chairmen of the district boards, these officers have been disposed to use that influence to push primary education and to induce parents to send their children to school.

§ 42. Enough has now been said to show where government control ends and that of the boards begin, so far as education is concerned. In respect of their other principal functions the line of division can be shown more briefly. These functions are—

Medical Relief.

Rural Sanitation.

Vaccination.

Veterinary Service.

Roads.

Public Works.

The medical relief provided by the boards is for the most part administered through dispensaries and hospitals. These institutions are provided and paid for by the district boards, but the staff is supplied and disciplined by the civil surgeon, under the general supervision of the inspector-general of hospitals for the province.

§ 43. Rural sanitation has scarcely passed beyond the stage of providing supplies of permanganate of potash for disinfecting wells where cholera has broken out, helping villages

¹ The Financial Secretary notes : ' Only a few of the large cities received the grants for the employment of a proper inspecting staff. Speaking generally the general grants-in-aid of primary education are the only lever which government has, and powers of inspection by government officers are one of the conditions.'

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the integrity of the financial system and for the ability to detect and prevent fraud. The document also outlines the responsibilities of the accounting department in ensuring that all transactions are properly recorded and reported.

The second part of the document provides a detailed overview of the accounting process. It describes the steps involved in recording transactions, from the initial entry into the accounting system to the final reporting of the results. The document also discusses the importance of maintaining accurate records of all transactions and the role of the accounting department in ensuring that all transactions are properly recorded and reported.

The third part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the integrity of the financial system and for the ability to detect and prevent fraud. The document also outlines the responsibilities of the accounting department in ensuring that all transactions are properly recorded and reported.

The fourth part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the integrity of the financial system and for the ability to detect and prevent fraud. The document also outlines the responsibilities of the accounting department in ensuring that all transactions are properly recorded and reported.

The fifth part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the integrity of the financial system and for the ability to detect and prevent fraud. The document also outlines the responsibilities of the accounting department in ensuring that all transactions are properly recorded and reported.

The sixth part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the integrity of the financial system and for the ability to detect and prevent fraud. The document also outlines the responsibilities of the accounting department in ensuring that all transactions are properly recorded and reported.

The seventh part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the integrity of the financial system and for the ability to detect and prevent fraud. The document also outlines the responsibilities of the accounting department in ensuring that all transactions are properly recorded and reported.

The eighth part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the integrity of the financial system and for the ability to detect and prevent fraud. The document also outlines the responsibilities of the accounting department in ensuring that all transactions are properly recorded and reported.

to keep their wells in order and to organize rudimentary arrangements for sanitary purposes, and also the drainage of swamps. In the performance of these functions, boards are advised by the medical officers of the government.

Vaccination is administered entirely by the district surgeons. The boards do no more than vote the money to be spent on the service.

For veterinary work the board usually provides one dispensary¹ and three or four travelling veterinary officers. Their duties are to inoculate against pests, treat sick animals, and perform minor operations such as gelding. These veterinary officers are all government officials, subject to the superintendent of the civil veterinary department which is under the director of agriculture. The chairman of the board can send these veterinary officers to any particular place and suspend them for negligence, pending inquiry by the head of their department.

§ 44. We may now turn to roads and bridges. The trunk roads of the province are constructed, maintained, and paid for by the provincial government. All other roads are paid for by the boards. The work on some of the metalled roads is done for the boards by the public works department. Even on roads where the boards do their own work, some of their overseers are officials of the public works department. In most cases they are recommended by that department.

Constructional works costing less than Rs. 2,500, whether buildings, roads, bridges, or drainage-works, may be undertaken by the boards through their own staff.² Constructional works of any kind over that figure can only be undertaken through the public works department. Over works of this nature there exists a standing controversy between the boards and the public works department. The boards complain that the public works department specifies and requires a solidity and permanence of structure which the boards regard as over-costly. The public works department considers, on the other hand, that unless an adequate cost is incurred in original construction, the revenues of the boards will be over-burdened with maintenance charges.

¹ The Financial Secretary notes : ' Things are running in the direction of dispensaries in each tahsil.'

² The Financial Secretary notes : ' The district boards with more competent staffs have been allowed higher limits. Municipal boards have much greater freedom, more especially the larger municipalities in which, practically speaking, very large sanitary works are controlled.'

to keep their wells in order and to organize rudimentary arrangements for sanitary purposes, and also the drainage of swamps. In the performance of these functions, boards are advised by the medical officers of the government.

Vaccination is administered entirely by the district surgeons. The boards do no more than vote the money to be spent on the service.

For veterinary work the board usually provides one dispensary¹ and three or four travelling veterinary officers. Their duties are to inoculate against pests, treat sick animals, and perform minor operations such as gelding. These veterinary officers are all government officials, subject to the superintendent of the civil veterinary department which is under the director of agriculture. The chairman of the board can send these veterinary officers to any particular place and suspend them for negligence, pending inquiry by the head of their department.

§ 44. We may now turn to roads and bridges. The trunk roads of the province are constructed, maintained, and paid for by the provincial government. All other roads are paid for by the boards. The work on some of the metalled roads is done for the boards by the public works department. Even on roads where the boards do their own work, some of their overseers are officials of the public works department. In most cases they are recommended by that department.

Constructional works costing less than Rs. 2,500, whether buildings, roads, bridges, or drainage-works, may be undertaken by the boards through their own staff.² Constructional works of any kind over that figure can only be undertaken through the public works department. Over works of this nature there exists a standing controversy between the boards and the public works department. The boards complain that the public works department specifies and requires a solidity and permanence of structure which the boards regard as over-costly. The public works department considers, on the other hand, that unless an adequate cost is incurred in original construction, the revenues of the boards will be over-burdened with maintenance charges.

¹ The Financial Secretary notes : ' Things are running in the direction of dispensaries in each tahsil.'

² The Financial Secretary notes : ' The district boards with more competent staffs have been allowed higher limits. Municipal boards have much greater freedom, more especially the larger municipalities in which, practically speaking, very large sanitary works are controlled.'

The result is that the boards always try where possible to keep projected works within the Rs. 2,500 limit so as to retain the control of design and construction in their own hands.

§ 45. It will thus be seen that all these functions assigned to and paid for by the boards are in fact administered, for the most part, by government officials, in their discipline responsible to government departments. It must always be remembered that the chairman of the board is in all cases, at present, the district officer. It remains to be seen whether the system would work if once this nerve, which now connects the elective boards with the government departments, were severed. It is not unlikely that the dispensaries, vaccination, and veterinary stations would have to be staffed by officers subject to the discipline of the boards. The government officials would then be confined to inspecting and reporting to government how far the boards were discharging their functions. The normal means exercised by governments elsewhere in keeping the local authorities up to the mark, is by threatening to withhold grants-in-aid, or, in the last resort, by suspending the local authority in default and administering the district itself for a time.

C

MODIFICATIONS OF THE PROPOSALS OUTLINED IN III AS A RESULT OF THE FOREGOING ANALYSIS AND ALSO OF CERTAIN CRITICISMS RECEIVED

§ 46. In these pages and in IV we now have before us information in sufficient detail to see how far some of the proposals contained in III need to be revised in order to make them workable. I also have before me a mass of criticism from a number of correspondents upon these proposals. By several of these gentlemen it is weightily urged that education, or at any rate primary vernacular education, ought to be included in the first group of functions transferred from the present provincial governments to the ministers of a legislature responsible to a provincial electorate.¹ An important question arises whether the control of primary vernacular education is in practice

¹ A commissioner notes : ' I see no reason why the control of vernacular education should not be separated from English education and transferred to the responsible government.'

The first step in the process is to identify the problem. This involves a thorough analysis of the situation and the identification of the key issues. Once the problem has been identified, the next step is to develop a plan of action. This plan should outline the steps that need to be taken to address the problem and the resources that will be required. The third step is to implement the plan. This involves putting the plan into action and monitoring progress. The final step is to evaluate the results. This involves assessing the effectiveness of the plan and making any necessary adjustments.

Conclusion

The purpose of this study was to explore the experiences of teachers who have implemented the Common Core State Standards (CCSS) in their classrooms. The study found that teachers who have implemented the CCSS have experienced a variety of challenges, including a lack of resources, a lack of training, and a lack of support from administrators. Despite these challenges, teachers who have implemented the CCSS have also experienced a number of benefits, including increased student achievement and a more rigorous curriculum. The study also found that teachers who have implemented the CCSS are more likely to be satisfied with their work and more likely to stay in the profession.

The result is that the boards always try where possible to keep projected works within the Rs. 2,500 limit so as to retain the control of design and construction in their own hands.

§ 45. It will thus be seen that all these functions assigned to and paid for by the boards are in fact administered, for the most part, by government officials, in their discipline responsible to government departments. It must always be remembered that the chairman of the board is in all cases, at present, the district officer. It remains to be seen whether the system would work if once this nerve, which now connects the elective boards with the government departments, were severed. It is not unlikely that the dispensaries, vaccination, and veterinary stations would have to be staffed by officers subject to the discipline of the boards. The government officials would then be confined to inspecting and reporting to government how far the boards were discharging their functions. The normal means exercised by governments elsewhere in keeping the local authorities up to the mark, is by threatening to withhold grants-in-aid, or, in the last resort, by suspending the local authority in default and administering the district itself for a time.

C

MODIFICATIONS OF THE PROPOSALS OUTLINED IN III AS A RESULT OF THE FOREGOING ANALYSIS AND ALSO OF CERTAIN CRITICISMS RECEIVED

§ 46. In these pages and in IV we now have before us information in sufficient detail to see how far some of the proposals contained in III need to be revised in order to make them workable. I also have before me a mass of criticism from a number of correspondents upon these proposals. By several of these gentlemen it is weightily urged that education, or at any rate primary vernacular education, ought to be included in the first group of functions transferred from the present provincial governments to the ministers of a legislature responsible to a provincial electorate.¹ An important question arises whether the control of primary vernacular education is in practice

¹ A commissioner notes : ' I see no reason why the control of vernacular education should not be separated from English education and transferred to the responsible government.'

separable from that of secondary and university education. In order to suggest an answer to that question, a study of the system of higher education will be necessary, which I have not yet made. In the meantime it will be useful for the purpose of the notes contained in this study to assume that, as the administration of vernacular schools has been delegated to local boards, the ultimate control of those schools (including of course the normal schools) could be separated from the control of the English schools and universities. For the purpose of discussion let us assume then that, as a temporary measure, the existing government could transfer the control of vernacular education to a provincial ministry, while retaining for subsequent transfer the control of the higher educational system.¹

§ 47. From the foregoing analysis one feature clearly emerges. In the very imperfect list of functions printed on pp. 113-4 of III, the following functions are grouped together:

Public Health.	Local Government.
Hospitals. ²	Education.
Dispensaries.	

As observed on a previous page, these functions 'are so nearly' interconnected that they would all have to be transferred 'together'. Certainly that is true so far as vernacular education is concerned, for local government is simply the control of the local bodies which administer vernacular education. For the same reason it is true of dispensaries and also of such aspects of public health as are now administered by the boards.

§ 48. In this matter of dispensaries and public health we are faced by one of those curious administrative tangles

¹ Parliament eventually decided, on the recommendation of Mr. Feetham's committee, to transfer education as a whole, including Universities, to ministers responsible to electorates, with the temporary exception of Calcutta.

² A commissioner notes:

'Hospitals. In each district one hospital and staff and the civil surgeon must be retained by the provincial government. The civil surgeoncies must be retained for the following reasons:

'(1) They form the reserve for the army in time of war.

'(2) They are required for medico-legal work.

'(3) They are required for the jails and lunatic asylums.

'(4) They are required for the medical treatment of the officers of the imperial and provincial governments.

'Each civil surgeon should have one good hospital under him in order to give him regular work and experience. If it cares to do so the Responsible Government could also open a hospital at head-quarters, but in many cases it would not be necessary.'

separable from that of secondary and university education. In order to suggest an answer to that question, a study of the system of higher education will be necessary, which I have not yet made. In the meantime it will be useful for the purpose of the notes contained in this study to assume that, as the administration of vernacular schools has been delegated to local boards, the ultimate control of those schools (including of course the normal schools) could be separated from the control of the English schools and universities. For the purpose of discussion let us assume then that, as a temporary measure, the existing government could transfer the control of vernacular education to a provincial ministry, while retaining for subsequent transfer the control of the higher educational system.¹

§ 47. From the foregoing analysis one feature clearly emerges. In the very imperfect list of functions printed on pp. 113-4 of III, the following functions are grouped together:

Public Health.

Local Government.

Hospitals.²

Education.

Dispensaries.

As observed on a previous page, these functions 'are so nearly' interconnected that they would all have to be transferred 'together'. Certainly that is true so far as vernacular education is concerned, for local government is simply the control of the local bodies which administer vernacular education. For the same reason it is true of dispensaries and also of such aspects of public health as are now administered by the boards.

§ 48. In this matter of dispensaries and public health we are faced by one of those curious administrative tangles

¹ Parliament eventually decided, on the recommendation of Mr. Feetham's committee, to transfer education as a whole, including Universities, to ministers responsible to electorates, with the temporary exception of Calcutta.

² A commissioner notes:

'Hospitals. In each district one hospital and staff and the civil surgeon must be retained by the provincial government. The civil surgeoncies must be retained for the following reasons:

'(1) They form the reserve for the army in time of war.

'(2) They are required for medico-legal work.

'(3) They are required for the jails and lunatic asylums.

'(4) They are required for the medical treatment of the officers of the imperial and provincial governments.

'Each civil surgeon should have one good hospital under him in order to give him regular work and experience. If it cares to do so the Responsible Government could also open a hospital at head-quarters, but in many cases it would not be necessary.'

1. *Journal of the American Medical Association*, 1997; 277: 1039-1043.

which arise from the centralized nature of Indian government. The district surgeons in charge of the hospitals, dispensaries, and sanitary services administered by the boards are subject to the chief inspector of hospitals as their disciplinary head. He, of course, is a member of the Indian medical service. In small stations the prison is also controlled by the district surgeon, who in that capacity is responsible to the inspector-general of prisons, who is also a member of the I.M.S. All prisons are controlled by members of the I.M.S. ; but, where a prison is large enough to monopolize the time of one doctor, he does not combine with it the work of district surgeon, but is responsible only to the chief inspector of prisons. Now prisons must obviously be included amongst the very last group of functions which could be transferred to elective authorities. They would have to be reserved to the old executives until those executives ceased to exist.

The procedure suggested in paragraph 37 of III provides a way out of this difficulty. Under this procedure the new ministry would take into their service from the old executive so many members of the medical service as were required to administer the dispensaries and rural sanitation. This is but one illustration of the truth that the present machinery of government is adapted to a bureaucratic system which has its mainspring outside India. In establishing organs of representative government, those organs must be allowed to construct new machines out of materials selected from the old services, on principles which have regard to the fact that each self-governing organ has a separate mainspring in its own electorate. The new ministries could then decide for themselves whether it would be possible to continue the present system under which their officials do the medical work paid for by the boards, or whether the boards, as in other countries, should have separate officials of their own. It need hardly be added that the existing rights and privileges of officials would have to be guaranteed. Presumably ministers would have to offer terms good enough to induce Indian officials to transfer their services from the old government to the new. And, so far as the medical services are concerned, the process would be greatly facilitated by the fact that plenty of Indian officials are available.

The same conditions apply to the veterinary service administered by the boards. Here, however, the whole problem would be solved automatically if it were decided to transfer the agricultural department to the ministry

[illegible]

at the same time as the control of local government and vernacular education.¹

§ 49. We now come to roads and buildings. So far as provincial trunk roads are concerned, these might either be retained by the old executives or handed over to the ministries together with the first batch of powers, as might seem desirable. Such roads are already scheduled and separated from those entrusted to the boards, and if desirable in the earlier stages of the process, the two sets of roads could easily be administered by two different authorities.²

§ 50. As to the public works department there can be no question of transferring the department *en bloc*. It goes without saying that a ministry to whom any important functions were assigned would have to organize a public works department of their own from the personnel of the public works department controlled by the existing provincial government. Under self-governing institutions a public works department is, like a printing and stationery department, correlative to any administrative authority of importance. It must have a body of constructional experts under its own direction, through whom to construct its buildings, roads, or any other part of its physical plant. Even the Government of India has such a department for the construction of the new capital at Delhi. Otherwise it depends upon the public works departments of the provincial governments. At Simla, for instance, the public works department of the Punjab looks after the government buildings. Such an arrangement is possible because provincial governments are merely local departments of the Government of India. Their mainspring is not in themselves but in the Government of India, and they are in every detail under its orders. But the moment you create a real organ of provincial self-government responsible to an electorate, its mainspring is in that electorate. For discharging the functions assigned to it, it is answerable to its own electorate and not to the Government of India, and it must therefore

¹ A commissioner notes: 'The veterinary service forms a branch of the agricultural service, and it will be better to keep it with the agricultural service and take it away from the responsible government till the whole agricultural department is transferred.'

² A commissioner notes: 'I do not anticipate any harm from the transfer of the trunk roads. They have not the same importance from a military point of view since the advent of railways, and even if the responsible government allowed its roads to get bad, no irreparable damage would ensue. In this matter public opinion would probably keep the responsible government up to the mark.'

have a public works department of its own through which to construct and maintain the physical works assigned to its care.

§ 51. Assuming then that my critics are right, and that the first group of powers transferred to elected legislatures should include vernacular education, we are now in a position to see what other functions would have to go with it. The following may be regarded as the smallest possible family of functions with which the experiment could begin :

Vernacular education.

Medical relief.

Rural sanitation.

The veterinary service.

Roads, other than provincial trunk roads.

A public works department.

Control of all other functions already delegated to boards.

The general control of district and municipal bodies.

To these could be added at will, either to begin with, or later on, as experience proved that a fresh transfer of powers was justified, any of the provincial powers shown in § 33 of III and in § 5 of IV, that is to say—

I

Agriculture.

Co-operative credit.

Industries.

Museums.

Registration of deeds.

Provincial trunk roads and bridges.

Local railways.

Forests.

Irrigation.

Higher education.

Famine relief.¹

¹ A commissioner notes : ' In my opinion provincial roads and bridges should go with the other roads, and the veterinary service should remain with agriculture.

' The remaining powers fall into the following groups :

Group 1	Agriculture	}	Chiefly spending and administrative departments.
	Co-operative credit		
	Veterinary		
Group 2	Industries		
	Museums		
	Local railways	}	Chiefly revenue-earning departments.
Group 3	Higher education		
Group 4	Excise		
	Stamps		
	Registration		
	Professions	}	Chiefly revenue-earning departments.
Group 5	Land revenue		
	Land records		
	Forests		
	Irrigation		
	Famine	}	
Group 6	Civil and criminal justice		
	Prisons		
	Police.'

1. The first part of the document is a letter from the President of the United States to the Congress, dated January 3, 1801. It is a very important document, as it contains the President's first message to the Congress. The letter is written in a very formal and dignified style, and it is a very good example of the President's power and authority. The President's message is a very important document, as it contains the President's first message to the Congress. The letter is written in a very formal and dignified style, and it is a very good example of the President's power and authority.

2. The second part of the document is a letter from the President of the United States to the Congress, dated January 3, 1801. It is a very important document, as it contains the President's first message to the Congress. The letter is written in a very formal and dignified style, and it is a very good example of the President's power and authority. The President's message is a very important document, as it contains the President's first message to the Congress. The letter is written in a very formal and dignified style, and it is a very good example of the President's power and authority.

§ 52. The powers transferred might differ in different provinces according to the local conditions of each. Bombay, presumably, would usually be ripe for a larger extension of self-government than the Central Provinces. The principle is perfectly elastic and in more than one direction. To begin with it would be quite possible to reserve primitive areas to the control of the old governments. In the United Provinces, for instance, the mountain districts of the north and Bandelkhand could be reserved until the elective council and their ministers had found their feet and proved their competence. Nor should it be assumed that the existing provinces are of a size suitable to self-government. Their limits have been defined in response to the accidents of history and the needs of an autocratic régime. They are, in fact, designed as satrapies, and three of them contain populations of over 40,000,000. They are larger than Prussia, Austria, Hungary, France, or Italy. Bengal equals, and the United Provinces exceeds, the population of the British Isles. New York, the most populous state of the great American Republic, contains less than 10,000,000 and the average population of the states is under 500,000. The size of the areas and populations assigned to elective provincial governments may well determine the failure or success of the earliest ventures in self-government. The map of India, as at present designed, is suitable only to a great dependency governed from England. If India is to become the home of one nation, whose peoples are masters of their house, and also of all the rooms of that great edifice, the whole map of India must be reconsidered in the light of that conception. But the problem is so large that it must form the subject of a separate study.¹

§ 53. We may now return to the list of functions which might be assigned at the outset to elective councils and ministers. Even the minimum list of functions as outlined above would justify and require at least three portfolios. Vernacular education would have to rest in the hands of one minister, finance in those of another, while the control of local bodies in respect of hospitals, dispensaries, roads, &c., and the buildings required by the new authority would have to rest with a third.

¹ A commissioner notes: 'The regrouping of territory contemplated had much better be postponed till a very much fuller measure of responsible government is given than is likely to be conceded at the commencement.'

APPENDIX

With reference to the controversy dealt with in § 33, a senior officer of great linguistic attainments writes : ' You have been somewhat misled about the language question. To begin with the word Hindi is used in two very different senses. As you use it in the opening of § 33 it corresponds to "romance" in relation to the languages of south-west Europe, while in the middle of the paragraph it means a definite language. I would suggest something like the following : Whether literary Sanskrit was ever a spoken language has been doubted by some students who regard it (as indeed its name = 'polished' implies) as an artificial product for literary purposes. It is at all events certain that a number of variations known as Prakrits were used in northern India before and after the Christian era. One of these Prakrits in turn was adopted for literary purposes, but in the mouths of the people changes continued. When the Muhammadans began to invade India from the north the modern vernaculars were beginning to assume definite form. The term Hindi is sometimes used in a generic way to include all the tongues spoken in the southern Punjab, the United Provinces, Bihar, a large part of the Central Provinces, Central India, and Rajputana. These differ, however, as much as the languages of southern Europe. Up to the end of the eighteenth century the vernaculars were hardly used in literature except in poetry of which a considerable amount exists, including works of high literary value. There is not a single book of prose worth note in any of the group before that date. Muhammadans used Persian or Arabic for prose, and Hindus Sanskrit. The latest scientific classification (Sir George Grierson in the *Linguistic Survey of India*) recognizes four languages in the United Provinces—Central Pahari in the hills, and Western Hindi, Eastern Hindi, and Bihari in the plains, each with a long history which can be traced. It used to be thought that Hindostani was a mongrel speech made up in the bazars of Delhi by the Muhammadan invaders and the Indians with whom they came in contact. Inquiry has shown that this was a mistake. The grammatical basis of Hindostani is the dialect of Western Hindi spoken in the tract of country lying between Delhi and Bareilly. It was adopted by the Muhammadans and carried far and wide through India. No other dialect of the Hindi group has travelled far from its place of origin. Hindostani has been used for poetry by the Muhammadans for several hundred years, though the construction of words does not lend itself to the metres used by Hindus. Its use for prose was due to the English professors in the college at Fort William who required text-books. Once started (early in the nineteenth century) the literature has grown rapidly. Up to 1839 Persian was the court language in the province of Agra and Hindostani was then substituted for it. A rural population needs a very small number of vocables, and Hindostani was enriched

APPENDIX

With reference to the controversy dealt with in § 33, a senior officer of great linguistic attainments writes : ' You have been somewhat misled about the language question. To begin with the word Hindi is used in two very different senses. As you use it in the opening of § 33 it corresponds to "romance" in relation to the languages of south-west Europe, while in the middle of the paragraph it means a definite language. I would suggest something like the following : Whether literary Sanskrit was ever a spoken language has been doubted by some students who regard it (as indeed its name = 'polished' implies) as an artificial product for literary purposes. It is at all events certain that a number of variations known as Prakrits were used in northern India before and after the Christian era. One of these Prakrits in turn was adopted for literary purposes, but in the mouths of the people changes continued. When the Muhammadans began to invade India from the north the modern vernaculars were beginning to assume definite form. The term Hindi is sometimes used in a generic way to include all the tongues spoken in the southern Punjab, the United Provinces, Bihar, a large part of the Central Provinces, Central India, and Rajputana. These differ, however, as much as the languages of southern Europe. Up to the end of the eighteenth century the vernaculars were hardly used in literature except in poetry of which a considerable amount exists, including works of high literary value. There is not a single book of prose worth note in any of the group before that date. Muhammadans used Persian or Arabic for prose, and Hindus Sanskrit. The latest scientific classification (Sir George Grierson in the *Linguistic Survey of India*) recognizes four languages in the United Provinces—Central Pahari in the hills, and Western Hindi, Eastern Hindi, and Bihari in the plains, each with a long history which can be traced. It used to be thought that Hindostani was a mongrel speech made up in the bazars of Delhi by the Muhammadan invaders and the Indians with whom they came in contact. Inquiry has shown that this was a mistake. The grammatical basis of Hindostani is the dialect of Western Hindi spoken in the tract of country lying between Delhi and Bareilly. It was adopted by the Muhammadans and carried far and wide through India. No other dialect of the Hindi group has travelled far from its place of origin. Hindostani has been used for poetry by the Muhammadans for several hundred years, though the construction of words does not lend itself to the metres used by Hindus. Its use for prose was due to the English professors in the college at Fort William who required text-books. Once started (early in the nineteenth century) the literature has grown rapidly. Up to 1839 Persian was the court language in the province of Agra and Hindostani was then substituted for it. A rural population needs a very small number of vocables, and Hindostani was enriched

freely by borrowing from Persian and consequently from Arabic, as Persian can adopt almost any Arabic word unchanged. Simultaneously with the introduction of Hindostani the professors invented what should strictly be termed High Hindi. Of this Sir George Grierson says : "It was intended to be a Hindostani for the use of Hindus, and was derived from Urdu [a term meaning camp] by ejecting all words of Persian or Arabic birth and substituting for them words either borrowed from Sanskrit (*talsamas*) or derived from the old primary Prakrit (*tadbhavas*).” High Hindi also became popular, and is now used as the recognized vehicle for prose by people in northern India who do not write Urdu. The important point to notice is that both Hindostani and High Hindi have exactly the same accident and almost the same syntax. Grammatically they differ only in a few minor points as Hindostani has adopted a few Persian constructions which do not affect the meaning. These two varieties of language have, however, drifted widely apart in vocabulary. Many writers of Hindostani, both Hindus and Muhammadans, especially in the first five or six decades of its use, overloaded it with Persian and Arabic words. The writers of High Hindi, on the other hand, have shown a tendency to go farther even than stated above. Not only do they substitute Sanskrit for Persian or Arabic words (some of which have been used even in Hindi poetry centuries ago), but they also change a modified Prakrit word into its Sanskrit form, as a French pedant might discard the word "royal" in favour of "régal". The result is that an undergraduate who knows no Sanskrit and has not studied High Hindi cannot read with ease a book intended for a boy of twelve or thirteen. One who has done his school course in High Hindi finds some difficulty in reading or understanding Hindostani of any polish, though not nearly so much as in the reverse case, because Hindostani is the ordinary medium of conversation, while High Hindi is only used orally between pandits, or pedants, or in set speeches. I have heard a Hindu giving a popular lecture on the progress of mathematical students start out in High Hindi, and unconsciously relapse into ordinary Hindostani within five minutes.

A further complication is that Hindostani is generally written in the Persian character, while High Hindi is invariably written in Devanagari. There is thus a conflict of character as well as a conflict in the choice of vocabulary.

The religion and philosophy of Hindus and Muhammadans differ as completely as it is possible to imagine. As already noted even their metrical systems are not the same. Technical expressions in religion, philosophy, and literature are naturally borrowed from the appropriate classical language. As the court language up to 1839 was Persian, law terms are nearly all Persian and Arabic (in contrast to Bengali, which has adopted Sanskrit). Political terms of similar origin are generally understood. In 1909 I was deputed to the head-quarters of each division to explain the details of Lord

freely by borrowing from Persian and consequently from Arabic, as Persian can adopt almost any Arabic word unchanged. Simultaneously with the introduction of Hindostani the professors invented what should strictly be termed High Hindi. Of this Sir George Grierson says : "It was intended to be a Hindostani for the use of Hindus, and was derived from Urdu [a term meaning camp] by ejecting all words of Persian or Arabic birth and substituting for them words either borrowed from Sanskrit (*talsamas*) or derived from the old primary Prakrit (*tadbhavas*).” High Hindi also became popular, and is now used as the recognized vehicle for prose by people in northern India who do not write Urdu. The important point to notice is that both Hindostani and High Hindi have exactly the same accidentence and almost the same syntax. Grammatically they differ only in a few minor points as Hindostani has adopted a few Persian constructions which do not affect the meaning. These two varieties of language have, however, drifted widely apart in vocabulary. Many writers of Hindostani, both Hindus and Muhammadans, especially in the first five or six decades of its use, overloaded it with Persian and Arabic words. The writers of High Hindi, on the other hand, have shown a tendency to go farther even than stated above. Not only do they substitute Sanskrit for Persian or Arabic words (some of which have been used even in Hindi poetry centuries ago), but they also change a modified Prakrit word into its Sanskrit form, as a French pedant might discard the word "royal" in favour of "régal". The result is that an undergraduate who knows no Sanskrit and has not studied High Hindi cannot read with ease a book intended for a boy of twelve or thirteen. One who has done his school course in High Hindi finds some difficulty in reading or understanding Hindostani of any polish, though not nearly so much as in the reverse case, because Hindostani is the ordinary medium of conversation, while High Hindi is only used orally between pandits, or pedants, or in set speeches. I have heard a Hindu giving a popular lecture on the progress of mathematical students start out in High Hindi, and unconsciously relapse into ordinary Hindostani within five minutes.

A further complication is that Hindostani is generally written in the Persian character, while High Hindi is invariably written in Devanagari. There is thus a conflict of character as well as a conflict in the choice of vocabulary.

As the court language up to 1839 was Persian, law terms are nearly all Persian and Arabic (in contrast to Bengali, which has adopted Sanskrit). Political terms of similar origin are generally understood. In 1909 I was deputed to the head-quarters of each division to explain the details of Lord

Morley's scheme to prominent non-official gentlemen and to gather their opinions. So many men were unable to understand English that all our discussions were in vernacular and no difficulty was experienced in comprehension. Sir James Meston's durbar addresses, though possessing a high literary flavour with a Persian bias, have always been perfectly understood. So far as science is concerned the position varies. In mathematics separate vocabularies are used. There have been attempts to build up separate vocabularies for new studies, but I expect adaptations from English of such words as oxygen will be made. Hindi poetry is almost universally in a dialect or language differing from High Hindi in *accidence*. A European or a Muhammadan who knows Hindostani can read the most pedantic prose High Hindi with the aid of a dictionary. He cannot read poetry without learning a new conjugation of the verb and new forms of declining nouns and pronouns.

'The important points are :

'(a) The two current forms of prose literature owe their origin to European influence.

'(b) They are almost identical in grammar.

'(c) The grammar is that of the speech of people between Delhi and Bareilly.

'(d) The vocabulary differs according to taste, but necessarily in dealing with certain subjects.

'(e) Racial prejudice has been imported into character as well as vocabulary.

'(f) Hindostani can be used for either prose or verse (Persian metres).

'(g) Hindi verse is generally in a dialect grammatically different from that of prose.

'(h) There is a modern tendency, especially among Uhdans, to simplify their vocabulary.

'I believe that in time good sense will arrive at a satisfactory compromise including the roman characters.'

A JOINT ADDRESS

FROM EUROPEANS AND INDIANS TO HIS EXCELLENCY THE VICEROY AND GOVERNOR-GENERAL AND THE RIGHT HONOURABLE THE SECRETARY OF STATE FOR INDIA (*November 1917*).

§ 1. THE following is a record of meetings, held at Darjeeling and Calcutta, to discuss the position created by the pronouncement of August 20 on Indian Policy, by the Imperial Government :

'The policy of His Majesty's Government, with which the Government of India are in complete accord, is that of increasing the association of Indians in every branch of the administration and the gradual development of self-governing institutions with a view to the progressive realization of responsible government in India, as an integral part of the British Empire. They have decided that substantial steps in this direction should be taken as soon as possible, and that it is of the highest importance, as a preliminary to considering what these steps should be, that there should be a free and informal exchange of opinion between those in authority at Home and in India. His Majesty's Government have accordingly decided, with His Majesty's approval, that I should accept the Viceroy's invitation to proceed to India to discuss these matters with the Viceroy and the Government of India, to consider with the Viceroy the views of Local Governments, and to receive the suggestions of representative bodies and others. I would add that progress in this policy can only be achieved by successive stages. The British Government and the Government of India, on whom the responsibility lies for the welfare and advancement of the Indian peoples, must be judges of the time and measure of each advance, and they must be guided by the co-operation received from those upon whom new opportunities of service will thus be conferred and by the extent to which it is found that confidence can be reposed in their sense of responsibility. Ample opportunity will be afforded for the public discussion of the proposals, which will be submitted in due course to Parliament.'

A.—Principles.

§ 2. The Imperial Government having sent the Secretary of State to India for the purpose of gathering the opinions of all sections, we feel that the members of both the communities should discuss together the advice to be offered to the Government, bearing in mind that future generations are more affected than ourselves by changes about to be made. We also think that, in times like these, anything of the nature of civil discord amongst those not called upon for active service is out of place. Our opinion is that Europeans and Indians should first agree as to the main outlines which they think the pending reforms should follow. These outlines having been settled, it will then be possible for the different sections to formulate their own views as to details, in respect of which it would be to the public advantage that the Government should have every shade of opinion before them. The agreement relates only to the points printed in black type.

§ 3. Turning then to the recent pronouncement, we note that it was issued as embodying the policy of the Imperial Government upon which the three principal parties in Great Britain are now represented. As no contrary motion has been raised in either House, it must, in accordance with all precedents, be recognized as a declaration of policy accepted unanimously by the supreme legislature of the British Commonwealth.

In view of these considerations we agree to accept the pronouncement of August 20 as common ground, within the limits of which the discussion can take place.

§ 4. We have next to consider the positions implied in this pronouncement. To begin with we note that for the first time in any official pronouncement the vague and ambiguous term 'self-government' is replaced by the plain and definite words 'responsible government', which necessarily means the creation of executives responsible to, and therefore removable at the will of, elective bodies and electorates. This principle finds no expression in the various proposals already before the public on August 20, which were all inspired by the looser conception embodied in the words 'self-government'. The pronouncement thus creates a new position, which cannot be met by the adoption of any scheme of reforms as yet submitted for public consideration.

We agree that, having accepted the pronouncement, we are not only free, but even bound to consider the new situation created thereby with open minds.

A.—Principles.

§ 2. The Imperial Government having sent the Secretary of State to India for the purpose of gathering the opinions of all sections, we feel that the members of both the communities should discuss together the advice to be offered to the Government, bearing in mind that future generations are more affected than ourselves by changes about to be made. We also think that, in times like these, anything of the nature of civil discord amongst those not called upon for active service is out of place. Our opinion is that Europeans and Indians should first agree as to the main outlines which they think the pending reforms should follow. These outlines having been settled, it will then be possible for the different sections to formulate their own views as to details, in respect of which it would be to the public advantage that the Government should have every shade of opinion before them. The agreement relates only to the points printed in black type.

§ 3. Turning then to the recent pronouncement, we note that it was issued as embodying the policy of the Imperial Government upon which the three principal parties in Great Britain are now represented. As no contrary motion has been raised in either House, it must, in accordance with all precedents, be recognized as a declaration of policy accepted unanimously by the supreme legislature of the British Commonwealth.

In view of these considerations we agree to accept the pronouncement of August 20 as common ground, within the limits of which the discussion can take place.

§ 4. We have next to consider the positions implied in this pronouncement. To begin with we note that for the first time in any official pronouncement the vague and ambiguous term 'self-government' is replaced by the plain and definite words 'responsible government', which necessarily means the creation of executives responsible to, and therefore removable at the will of, elective bodies and electorates. This principle finds no expression in the various proposals already before the public on August 20, which were all inspired by the looser conception embodied in the words 'self-government'. The pronouncement thus creates a new position, which cannot be met by the adoption of any scheme of reforms as yet submitted for public consideration.

We agree that, having accepted the pronouncement, we are not only free, but even bound to consider the new situation created thereby with open minds.

§ 5. We are further of opinion that the direction of any steps taken in the immediate future ought to be considered first and foremost from the point of view whether they are calculated to lead towards the goal presented in the pronouncement under review. The necessary criterion, whereby all immediate proposals must be judged, is a clear conception of the ultimate goal, however remote. That goal is defined as 'responsible government in India as an integral part of the British Empire'. This implies the calling into existence in India of a self-governing nation or nations, on the lines of the great self-governing Dominions. The all-important question is, therefore, raised, whether India is to be regarded, like the continent of Europe, as the future home of a number of self-governing nations, or else like the United States as it would have been, had it developed as a British Dominion, a nation living within the bounds of one territory, but in size so great that it must be divided into a number of self-governing provinces. Is India to become a nation or a continent of nations, a Dominion or a group of Dominions? Are the separate provinces to be developed as separate self-governing nations? Or are we to look forward to a time, however remote, when interests common to India will be controlled by a Government responsible to India as a whole?

For those who accept the pronouncement the answer will be found implicit in its terms. Bengal, Madras, Bombay, Bihar and Orissa, the United Provinces, and the Punjab are indeed units of population equal or approximating to the scale of great European powers. But, if developed as self-governing nations, their future electorates would still be unable to control railways, tariffs, commercial law, and other major interests common to India as a whole. The control of interests, purely Indian, would still have to be exercised in the future, however distant, by the Imperial Government of the British Commonwealth. Responsible government for India in Indian affairs could never be realized under these conditions. The history of the United Kingdom, of Canada, of Australia, and of South Africa proves that national self-government cannot be realized here for any unit smaller than the Indian Peninsula. However formidable that enterprise may seem, and however remote its ultimate attainment, that goal must be adopted by those who accept the pronouncement and read its terms in the light of the experience gained in the other Dominions. In the comprehensive nationhood of India, to be called into being in

§ 5. We are further of opinion that the direction of any steps taken in the immediate future ought to be considered first and foremost from the point of view whether they are calculated to lead towards the goal presented in the pronouncement under review. The necessary criterion, whereby all immediate proposals must be judged, is a clear conception of the ultimate goal, however remote. That goal is defined as 'responsible government in India as an integral part of the British Empire'. This implies the calling into existence in India of a self-governing nation or nations, on the lines of the great self-governing Dominions. The all-important question is, therefore, raised, whether India is to be regarded, like the continent of Europe, as the future home of a number of self-governing nations, or else like the United States as it would have been, had it developed as a British Dominion, a nation living within the bounds of one territory, but in size so great that it must be divided into a number of self-governing provinces. Is India to become a nation or a continent of nations, a Dominion or a group of Dominions? Are the separate provinces to be developed as separate self-governing nations? Or are we to look forward to a time, however remote, when interests common to India will be controlled by a Government responsible to India as a whole?

For those who accept the pronouncement the answer will be found implicit in its terms. Bengal, Madras, Bombay, Bihar and Orissa, the United Provinces, and the Punjab are indeed units of population equal or approximating to the scale of great European powers. But, if developed as self-governing nations, their future electorates would still be unable to control railways, tariffs, commercial law, and other major interests common to India as a whole. The control of interests, purely Indian, would still have to be exercised in the future, however distant, by the Imperial Government of the British Commonwealth. Responsible government for India in Indian affairs could never be realized under these conditions. The history of the United Kingdom, of Canada, of Australia, and of South Africa proves that national self-government cannot be realized here for any unit smaller than the Indian Peninsula. However formidable that enterprise may seem, and however remote its ultimate attainment, that goal must be adopted by those who accept the pronouncement and read its terms in the light of the experience gained in the other Dominions. In the comprehensive nationhood of India, to be called into being in

centuries to come, the individualities of the Bengalee, the Maratha, the Sikh, the Canarese, and all the other numerous races must each find their place as sub-nationalities, like those of the English, Scotch, Welsh, and Irish in the United Kingdom, and like those of the British and French in Canada. The goal to be kept in mind must, therefore, be, not the nations of Europe but rather the United States as it would have been had it developed as a self-governing dominion of the British Commonwealth. However remote the realization of this conception may be, steps to be taken in the immediate future must yet be judged by the criterion whether they tend towards that goal.

To begin with, we are bound to consider how far the existing map is in harmony with this conception.

The map of India has been designed to suit the needs of a great dependency, whose internal and domestic affairs are subject in every detail to direction from an authority on the other side of the world. A government, whose main-spring is outside the area it is governing, has no difficulty in uniting under one administrative machine, not only communities which are different in character, but separate territories. Under this system, the Imperial Government had no difficulty in incorporating Burma as a province of India. But if India is now to be governed with a view to becoming a self-governing nation, Burma, by reason of her situation, never can have a place in its national fabric. She has less in common with India than Ceylon. Her affinities with India are less than those of Finland with Russia, or of Mexico with the United States. The project of developing India as a self-governing nation can be rendered less formidable at once by eliminating Burma. It has no place in the picture. It ought to be put in the same category as Ceylon, and nothing in these suggestions should be taken as referring to Burma.

In like manner, the conception, abandoned in the recent pronouncement, has operated to divide India into a few great satrapies commensurate with the principal nations of Europe. In Bombay it has united communities so diverse as Sind, the Marathas, and the Canarese. No less artificial is the union of Bihar with Orissa. In the United Provinces more than 48,000,000 souls have been brought under the rule of a single officer, and so long as these Governments are solely amenable to a government which takes its direction from London, no difficulty is experienced. But the moment any real beginning in responsible government

centuries to come, the individualities of the Bengalee, the Maratha, the Sikh, the Canarese, and all the other numerous races must each find their place as sub-nationalities, like those of the English, Scotch, Welsh, and Irish in the United Kingdom, and like those of the British and French in Canada. The goal to be kept in mind must, therefore, be, not the nations of Europe but rather the United States as it would have been had it developed as a self-governing dominion of the British Commonwealth. However remote the realization of this conception may be, steps to be taken in the immediate future must yet be judged by the criterion whether they tend towards that goal.

To begin with, we are bound to consider how far the existing map is in harmony with this conception.

The map of India has been designed to suit the needs of a great dependency, whose internal and domestic affairs are subject in every detail to direction from an authority on the other side of the world. A government, whose main-spring is outside the area it is governing, has no difficulty in uniting under one administrative machine, not only communities which are different in character, but separate territories. Under this system, the Imperial Government had no difficulty in incorporating Burma as a province of India. But if India is now to be governed with a view to becoming a self-governing nation, Burma, by reason of her situation, never can have a place in its national fabric. She has less in common with India than Ceylon. Her affinities with India are less than those of Finland with Russia, or of Mexico with the United States. The project of developing India as a self-governing nation can be rendered less formidable at once by eliminating Burma. It has no place in the picture. It ought to be put in the same category as Ceylon, and nothing in these suggestions should be taken as referring to Burma.

In like manner, the conception, abandoned in the recent pronouncement, has operated to divide India into a few great satrapies commensurate with the principal nations of Europe. In Bombay it has united communities so diverse as Sind, the Marathas, and the Canarese. No less artificial is the union of Bihar with Orissa. In the United Provinces more than 48,000,000 souls have been brought under the rule of a single officer, and so long as these Governments are solely amenable to a government which takes its direction from London, no difficulty is experienced. But the moment any real beginning in responsible government

is made, and executives responsible to electorates are created, however limited the powers entrusted to them may be to begin with, such combinations will surely break down. They will fail as certainly as did the attempt to unite Ontario and Quebec under one executive responsible to a common electorate. The foundations of Canadian nationhood were only laid by according separate provincial governments to both the races, under which each race could enjoy unhampered its own language, religion, and system of law. The examples of the United States, Canada, Australia, and South Africa, as contrasted with India, China, and the dependencies of Spain and France in the eighteenth century, prove that under elective institutions provincial administration cannot be made effective for units of population the size of great nations. Had the United States attempted to develop herself on the basis of five or six provinces, each would, for administrative reasons, have been driven to subdivide itself into minor self-governing provinces commensurate in size with the existing forty-eight States. County councils or district boards cannot take the place of provincial governments, which in nations of a certain magnitude must be interposed between local authorities on the one hand and the national government on the other. Hence, the government of the United Kingdom with its population of 45,000,000 is increasingly unable to cope with their need for social reform.

Thus, had America tried to develop on the basis of five or six provinces, each with subordinate provinces, each therefore on the scale, and organized on the pattern, of great federal nations, each would have felt and acted as nations. They would have fallen apart, and the United States would have failed to achieve national unity in accordance with the demands of nature and good government. Her territory would have become the home of five or six nations, with no common control of interests common to all. Like Europe or South America, she would have become the theatre of ceaseless wars, instead of the home of internal peace.

The conclusion is that it is impossible for India to develop as a self-governing Dominion, or to achieve a genuine nationhood in the future, however distant, on the basis of a map inherited from the Mughal Empire and fashioned to suit the needs of an administration which has its main-spring in England. We agree, therefore, that the selection of areas capable of development as the self-governing provinces of a future United States of India within the

is made, and executives responsible to electorates are created, however limited the powers entrusted to them may be to begin with, such combinations will surely break down. They will fail as certainly as did the attempt to unite Ontario and Quebec under one executive responsible to a common electorate. The foundations of Canadian nationhood were only laid by according separate provincial governments to both the races, under which each race could enjoy unhampered its own language, religion, and system of law. The examples of the United States, Canada, Australia, and South Africa, as contrasted with India, China, and the dependencies of Spain and France in the eighteenth century, prove that under elective institutions provincial administration cannot be made effective for units of population the size of great nations. Had the United States attempted to develop herself on the basis of five or six provinces, each would, for administrative reasons, have been driven to subdivide itself into minor self-governing provinces commensurate in size with the existing forty-eight States. County councils or district boards cannot take the place of provincial governments, which in nations of a certain magnitude must be interposed between local authorities on the one hand and the national government on the other. Hence, the government of the United Kingdom with its population of 45,000,000 is increasingly unable to cope with their need for social reform.

Thus, had America tried to develop on the basis of five or six provinces, each with subordinate provinces, each therefore on the scale, and organized on the pattern, of great federal nations, each would have felt and acted as nations. They would have fallen apart, and the United States would have failed to achieve national unity in accordance with the demands of nature and good government. Her territory would have become the home of five or six nations, with no common control of interests common to all. Like Europe or South America, she would have become the theatre of ceaseless wars, instead of the home of internal peace.

The conclusion is that it is impossible for India to develop as a self-governing Dominion, or to achieve a genuine nationhood in the future, however distant, on the basis of a map inherited from the Mughal Empire and fashioned to suit the needs of an administration which has its main-spring in England. We agree, therefore, that the selection of areas capable of development as the self-governing provinces of a future United States of India within the

British Empire should be undertaken at the outset. These areas should be termed 'Provincial States' as a reminder that they are designed to serve as the autonomous provinces of the future United States of India within the Empire. The term also recalls the Native States. Their areas should be commensurate with the larger of those States like Hyderabad and Mysore, and should be determined, so far as possible with reference to history, to community of race, language, and religion, and above all to effective self-government on true provincial lines. Care should also be taken not to combine under one provincial government areas of totally different types, the economic interests of which are wholly distinct.

So long as an autocratic régime exists, its sub-divisions can be re-adjusted with relative ease. But the moment they are made the areas of elective authorities, the difficulty of changing them tends to become insuperable. Had the States of America been too large at the outset to serve as the ultimate areas of provincial autonomy, no power could alter them now, short of conquest or civil war. The Kingdom of Prussia overshadows all Germany, and no one dares to suggest its partition into provinces commensurate with its partners. To-day it needs but the nerve and foresight of a statesman to find and fix areas in India capable of developing into effective self-governing provinces, and yet such as will admit of her growth as a nation at unity with herself.

We agree, therefore, that the existing provinces need not be assumed to be areas suitable as a basis for responsible government, but such areas must be settled at the moment when the first instalment of responsible government is granted.

§ 6. Bearing in mind, then, the picture of India as a self-governing Dominion of the federal type, we recognize that, in the words of the pronouncement before us, 'progress in this policy can only be achieved by successive stages'. There must be stages, and the questions before us are, where those stages should begin, and what they should be. Reason and experience alike point to the conclusion that it is not in the sphere of the central government that the beginning should be made. Whether in the case of the United States of America, of Canada, Australia, or South Africa, nothing was done, or could have been done, to create a central and national government responsible to the nation as a whole, until responsible government had been completely and finally established in the several provinces. This does

British Empire should be undertaken at the outset. These areas should be termed 'Provincial States' as a reminder that they are designed to serve as the autonomous provinces of the future United States of India within the Empire. The term also recalls the Native States. Their areas should be commensurate with the larger of those States like Hyderabad and Mysore, and should be determined, so far as possible with reference to history, to community of race, language, and religion, and above all to effective self-government on true provincial lines. Care should also be taken not to combine under one provincial government areas of totally different types, the economic interests of which are wholly distinct.

So long as an autocratic régime exists, its sub-divisions can be re-adjusted with relative ease. But the moment they are made the areas of elective authorities, the difficulty of changing them tends to become insuperable. Had the States of America been too large at the outset to serve as the ultimate areas of provincial autonomy, no power could alter them now, short of conquest or civil war. The Kingdom of Prussia overshadows all Germany, and no one dares to suggest its partition into provinces commensurate with its partners. To-day it needs but the nerve and foresight of a statesman to find and fix areas in India capable of developing into effective self-governing provinces, and yet such as will admit of her growth as a nation at unity with herself.

We agree, therefore, that the existing provinces need not be assumed to be areas suitable as a basis for responsible government, but such areas must be settled at the moment when the first instalment of responsible government is granted.

§ 6. Bearing in mind, then, the picture of India as a self-governing Dominion of the federal type, we recognize that, in the words of the pronouncement before us, 'progress in this policy can only be achieved by successive stages'. There must be stages, and the questions before us are, where those stages should begin, and what they should be. Reason and experience alike point to the conclusion that it is not in the sphere of the central government that the beginning should be made. Whether in the case of the United States of America, of Canada, Australia, or South Africa, nothing was done, or could have been done, to create a central and national government responsible to the nation as a whole, until responsible government had been completely and finally established in the several provinces. This does

not imply that changes cannot, or ought not, to be made whereby public opinion may be voiced more freely in the counsels of the central authority, while that authority remains in theory and practice responsible to the Secretary of State. But responsible government means entrusting some functions to executives which hold office, and can be dismissed from office, by elected legislatures or electorates. That principle must first be tried and established in the provinces. It is only when provincial executives are answerable for all their functions to provincial electorates that the Indian executive can be rendered answerable to, and removable by, an Indian parliament and an Indian electorate.

We, therefore, agree that the first steps towards responsible government cannot be taken in the sphere of the central government.

§ 7. We have next to consider the fact that administrative mechanism designed to obey an authority remote from India itself cannot, as it stands, respond to the impetus of Indian electorates. Mechanism must be adapted to the nature of the force which drives it. The whole administrative system of England would have to be revised if the control of the electorate were replaced by a centralized power exercised from without. The reverse is equally true of India. If electorates are to be given responsibilities, however limited, they must to a great extent, and to an increasing degree, operate through departments, organized on principles different from those of the present machinery. With the introduction of responsible government it is necessary, therefore, to contemplate a change, not only of areas, but also in the character of the departments through which the electorates are to operate. The existing provincial administrations cannot be moulded by a series of gradual changes into the provinces of a self-governing Dominion. Their place must gradually be taken by provincial organs of a new type. The first step must be to create new organs responsible to the electorates of suitable areas. To these specified functions, together with corresponding revenues and powers of additional taxation, must be transferred. All other functions must be reserved to the existing provincial governments, to be transferred by successive stages to the elective organs, as each may prove its capacity for assuming the additional burden.

It follows, therefore, that during the period of transition

not imply that changes cannot, or ought not, to be made whereby public opinion may be voiced more freely in the counsels of the central authority, while that authority remains in theory and practice responsible to the Secretary of State. But responsible government means entrusting some functions to executives which hold office, and can be dismissed from office, by elected legislatures or electorates. That principle must first be tried and established in the provinces. It is only when provincial executives are answerable for all their functions to provincial electorates that the Indian executive can be rendered answerable to, and removable by, an Indian parliament and an Indian electorate.

We, therefore, agree that the first steps towards responsible government cannot be taken in the sphere of the central government.

§ 7. We have next to consider the fact that administrative mechanism designed to obey an authority remote from India itself cannot, as it stands, respond to the impetus of Indian electorates. Mechanism must be adapted to the nature of the force which drives it. The whole administrative system of England would have to be revised if the control of the electorate were replaced by a centralized power exercised from without. The reverse is equally true of India. If electorates are to be given responsibilities, however limited, they must to a great extent, and to an increasing degree, operate through departments, organized on principles different from those of the present machinery. With the introduction of responsible government it is necessary, therefore, to contemplate a change, not only of areas, but also in the character of the departments through which the electorates are to operate. The existing provincial administrations cannot be moulded by a series of gradual changes into the provinces of a self-governing Dominion. Their place must gradually be taken by provincial organs of a new type. The first step must be to create new organs responsible to the electorates of suitable areas. To these specified functions, together with corresponding revenues and powers of additional taxation, must be transferred. All other functions must be reserved to the existing provincial governments, to be transferred by successive stages to the elective organs, as each may prove its capacity for assuming the additional burden.

It follows, therefore, that during the period of transition

governments of two different types will have to exist side by side. No instalment of responsible government can be granted without creating executives responsible to, and therefore removable by, elective assemblies and electorates for certain functions and revenues within suitable areas. Meanwhile, the powers not yet transferred must be exercised by the existing provincial governments, which must be kept in being for that purpose, and remain responsible to, and therefore removable only by, the Government of India, the Secretary of State and finally Parliament itself. If responsible government is the goal, the only other alternative is sooner or later to transfer all powers of government at one stroke to executives removable at the will of Indian electorates. But this course is expressly barred by the terms of the pronouncement we have agreed to accept. It follows that in the transition stage governments of two different types must co-exist, the one responsible to electorates, the other to the Secretary of State. In our opinion, therefore, it is of the utmost importance to insist now that the responsibility must in either case be a real one. The responsibility of the new executives to their assemblies and electorates, however limited their functions, must be real. It must not be confused and destroyed by a network of minor restrictions and sanctions. On the other hand, the responsibility of the old governments to the Secretary of State for the functions reserved to them must be no less a real one. In discharging those functions, they can and should be exposed in every detail to the criticism and influence of Indian opinion. But in the last analysis the ultimate power of decision in respect of those functions must be reserved to the Secretary of State and his agents, until they can be transferred to the executives responsible to the electorates. And, in the words of the pronouncement, 'the British Government and the Government of India must be judges of the time and measure of each advance'.

We agree, therefore, that, during the period of transition, governments of two types must co-exist, the one responsible to electorates for specific powers, the other to the Secretary of State for all other powers, and that the responsibility of each must in fact be a real one, and their powers must be sufficient to enable them to discharge that responsibility efficiently.

§ 8. We have now to approach the question how new organs of provincial government responsible to electorates can be brought into being. The first preliminary is to create these

governments of two different types will have to exist side by side. No instalment of responsible government can be granted without creating executives responsible to, and therefore removable by, elective assemblies and electorates for certain functions and revenues within suitable areas. § 8. We have now to approach the question how new organs of provincial government responsible to electorates can be brought into being. The first preliminary is to create these

electorates, and also to provide an adequate supply of leaders competent to guide them and to translate their mandates into action and law.

With a view to providing men in some sort competent to act as members of popular legislatures and executives, there are improvements which might be made in the existing system. Executive councils might be introduced in the United Provinces, the Punjab, and the Central Provinces, and Indians, not exceeding in number half the members other than the head of the province, might be appointed to each. A second Indian Member might be added to the executive councils already in being. But these suggestions, if adopted, would add but half a dozen to the number of Indians in touch with administrative detail: of greater importance therefore is the suggestion that the unofficial members of provincial councils should be divided into committees, severally attached to the Members of Council, in much the same relation as the India Council is attached to the Secretary of State. In this capacity they would see and advise upon cases submitted to their opinion by their Member of Council, and thus gain an insight into administrative conditions. The most valuable of these changes can be made without legislation, and might, therefore, be effected as quickly as possible. They will help to prepare legislators and ministers for the first experiments in responsible government.

§ 9. On the other hand, they will do nothing to prepare electorates. Electoral figures have never been published; but in parts of Northern India they are known scarcely to exceed one two-thousandth part of the population. But electorates of an adequate strength and quality are the necessary foundation of responsible government. There must be an adequate number of citizens to whom government is answerable, and from whom, therefore, government can derive its authority; and those citizens must be capable in some sort of understanding the questions submitted to their judgement, of placing the public interest before their own, of doing justice to each other, and, what is of even greater importance, to those outside the electorate, even at the sacrifice of their personal interests. The material for such electorates is sadly deficient, and must be created. To argue that this can be done merely by extending the type of education given in schools and colleges is a dangerous fallacy. On the contrary, as all experience shows, a general extension of education without a simultaneous extension of political responsibility ends by sapping the foundations

the 1990s, the number of people in the United States who are obese has increased by 50% (Flegal et al. 2002). The prevalence of obesity in the United States is now 30% (Flegal et al. 2002).

Obesity is a complex condition that is caused by a combination of genetic, environmental, and behavioral factors. The most common cause of obesity is a combination of a sedentary lifestyle and a diet that is high in calories and fat. Other factors that can contribute to obesity include genetics, hormonal imbalances, and certain medications. Obesity is a leading cause of heart disease, diabetes, and other chronic health conditions. It is also associated with a higher risk of death. Obesity is a preventable condition, and there are many ways to reduce the risk of becoming obese. These include eating a healthy diet, getting regular exercise, and avoiding sedentary activities.

But electorates of an adequate strength and quality are the necessary foundation of responsible government. There must be an adequate number of citizens to whom government is answerable, and from whom, therefore, government can derive its authority; and those citizens must be capable in some sort of understanding the questions submitted to their judgement, of placing the public interest before their own, of doing justice to each other, and, what is of even greater importance, to those outside the electorate, even at the sacrifice of their personal interests. The material for such electorates is sadly deficient, and must be created. To argue that this can be done merely by extending the type of education given in schools and colleges is a dangerous fallacy. On the contrary, as all experience shows, a general extension of education without a simultaneous extension of political responsibility ends by sapping the foundations

of government. A great improvement and extension of education throughout India is urgently needed. But wisdom can only be learned from the teaching of experience itself and all that education can do is to open a people's mind, and enable them to read the lessons of experience which the exercise of responsibility alone can bring.

In order to train voters for the task of government, some responsibilities for government must be laid upon them. Until this is done, the process of political education has not been started. The gradual extension of such responsibilities must go side by side with the extension of education. Nor do we consider that this can now be limited with safety to the sphere of local government, which, of necessity, deals with administrative details only. The time is at hand when some responsibility for considering and deciding questions of principle, some political responsibility, that is to say, ought to be placed on the shoulders of electorates. Thus, while we do not think it is possible at this stage to make such changes in the Government of India, we think that the time has passed when the principle of responsible government can be limited, as it now is, to the sphere of local administration. If genuine electorates are to be called into being, some responsibilities of a provincial nature must first be laid upon them, and afterwards increased, as the electorates can be strengthened and enlarged, and can demonstrate capacity for bearing the burden. To make that burden too heavy at the outset is to jeopardize the whole project. No prudent person, for instance, would suggest that they should be made responsible for the maintenance of law and order to begin with. To do so would be risking a breakdown, which more than anything would delay progress towards complete responsible government. To begin with, the old experienced government must stand by to maintain order, and discharge those functions upon which the immediate stability of the social fabric depends. The first powers to be transferred to electorates should be those connected with social reforms, with the future building up of society, like education and local government. As soon as electorates have proved themselves capable of discharging these functions, it will be time to transfer others, the neglect of which is more quickly felt. We think, as a general proposition, that an electorate may be deemed fit for the exercise of full responsible government whenever it has been entrusted with, and has proved its competence in the control of, police and justice.

of government. A great improvement and extension of education throughout India is urgently needed. But wisdom can only be learned from the teaching of experience itself and all that education can do is to open a people's mind, and enable them to read the lessons of experience which the exercise of responsibility alone can bring.

In order to train voters for the task of government, some responsibilities for government must be laid upon them. Until this is done, the process of political education has not been started. The gradual extension of such responsibilities must go side by side with the extension of education. Nor do we consider that this can now be limited with safety to the sphere of local government, which, of necessity, deals with administrative details only. The time is at hand when some responsibility for considering and deciding questions of principle, some political responsibility, that is to say, ought to be placed on the shoulders of electorates. Thus, while we do not think it is possible at this stage to make such changes in the Government of India, we think that the time has passed when the principle of responsible government can be limited, as it now is, to the sphere of local administration. If genuine electorates are to be called into being, some responsibilities of a provincial nature must first be laid upon them, and afterwards increased, as the electorates can be strengthened and enlarged, and can demonstrate capacity for bearing the burden. To make that burden too heavy at the outset is to jeopardize the whole project. No prudent person, for instance, would suggest that they should be made responsible for the maintenance of law and order to begin with. To do so would be risking a breakdown, which more than anything would delay progress towards complete responsible government. To begin with, the old experienced government must stand by to maintain order, and discharge those functions upon which the immediate stability of the social fabric depends. The first powers to be transferred to electorates should be those connected with social reforms, with the future building up of society, like education and local government. As soon as electorates have proved themselves capable of discharging these functions, it will be time to transfer others, the neglect of which is more quickly felt. We think, as a general proposition, that an electorate may be deemed fit for the exercise of full responsible government whenever it has been entrusted with, and has proved its competence in the control of, police and justice.

In our opinion, therefore, a beginning should be made in training electorates by making them responsible for certain provincial functions. But the training will not be effective unless the system is so simplified that electors can easily trace the effect of the votes they cast. The existing tangled and complicated system of election is destructive of all educational result so far as political responsibility is concerned. The ordinary voter cannot possibly foresee the result of his vote on the Provincial Council, still less on the Imperial body. Besides which the existing system is an incentive to corruption. If only to render corruption more difficult, the initial electorates should be as large as possible. They should include those whose pockets will be directly affected by the votes they cast, for it is thus that the connexion of cause and effect is first brought home to electors.

Above all, the method of voting must be direct. Indirect election not only destroys the educational value of the system but destroys responsibility itself. It is really a device for concealing the fact that adequate electorates do not exist, and evades the difficult truth that they cannot be made a reality without giving some responsibilities to some electorates not yet ripe for them and taking inevitable risks.

B.—Outline of the Scheme Proposed

§ 10. We now propose to outline a scheme of development such as we think would give effect to the principles upon which we have agreed. Having done so, we shall be in a position to suggest the special safeguards which should be accorded to industrial and commercial interests. We recognize that the scheme must be one capable of adaptation to suit the highly various conditions and levels of advancement in the different provinces of India. We shall, therefore, sketch the scheme as we think it might be applied to a particular province, taking as our example one which is not so advanced as the old Presidencies, but perhaps more so than other parts of India. For this purpose we select the United Provinces, which has the advantage of being not only central but also the largest in India.

In this Province we suggest the old Kingdom of Oudh as an area suitable to form a Provincial State in the future self-governing Dominion. Another might be formed from the divisions surrounding Benares, a third from the Doab; while those to the North-West might be grouped round Meerut. Primitive communities, like those of the hill

In our opinion, therefore, a beginning should be made in training electorates by making them responsible for certain provincial functions. But the training will not be effective unless the system is so simplified that electors can easily trace the effect of the votes they cast. The existing tangled and complicated system of election is destructive of all educational result so far as political responsibility is concerned. The ordinary voter cannot possibly foresee the result of his vote on the Provincial Council, still less on the Imperial body. Besides which the existing system is an incentive to corruption. If only to render corruption more difficult, the initial electorates should be as large as possible. They should include those whose pockets will be directly affected by the votes they cast, for it is thus that the connexion of cause and effect is first brought home to electors.

Above all, the method of voting must be direct. Indirect election not only destroys the educational value of the system but destroys responsibility itself. It is really a device for concealing the fact that adequate electorates do not exist, and evades the difficult truth that they cannot be made a reality without giving some responsibilities to some electorates not yet ripe for them and taking inevitable risks.

B.—Outline of the Scheme Proposed

§ 10. We now propose to outline a scheme of development such as we think would give effect to the principles upon which we have agreed. Having done so, we shall be in a position to suggest the special safeguards which should be accorded to industrial and commercial interests. We recognize that the scheme must be one capable of adaptation to suit the highly various conditions and levels of advancement in the different provinces of India. We shall, therefore, sketch the scheme as we think it might be applied to a particular province, taking as our example one which is not so advanced as the old Presidencies, but perhaps more so than other parts of India. For this purpose we select the United Provinces, which has the advantage of being not only central but also the largest in India.

In this Province we suggest the old Kingdom of Oudh as an area suitable to form a Provincial State in the future self-governing Dominion. Another might be formed from the divisions surrounding Benares, a third from the Doab; while those to the North-West might be grouped round Meerut. Primitive communities, like those of the hill

districts of Kumaon and Bundelkhand and of Mirzapur, might, to begin with, be reserved to the present government of the United Provinces. This government, subject to certain changes, which we shall outline later, would remain in being, holding and exercising all powers which had not been transferred to the four Provincial States.

§ 11. The first step would be to create the largest electorates which may be deemed possible under existing conditions, in accordance with the principles suggested above. Indian conditions are so various that these principles must be applied in harmony with the conditions of each Provincial State.

§ 12. These electorates should elect assemblies consisting of from 45 to 75 members each. To these bodies should be transferred at least the present functions of the district boards, coupled with the control now exercised by the government over those functions. In order to simplify the electoral system, as far as possible at the outset, and avoid confusing the minds of inexperienced voters by numerous elections, those of the district boards might be abolished for the present in backward provinces at any rate. The boards might be appointed by the government of the Provincial State until it sees fit to re-establish an electoral system for the districts.

The municipalities would, of course, remain as at present, but would be transferred to the control of the Provincial State. The creation of panchayats and other local authorities would also be included within its legislative powers.

§ 13. By this scheme the new governments would at once be vested with the full control throughout their areas of—

Roads and bridges		Primary education.
Local government.		

To these in the United Provinces we think that agriculture, and in Bengal that higher education, should be added.

The administration of these functions would rest with a Ministry drawn from the assembly and responsible thereto. The Ministry would consist of five portfolios :

A Minister of	public works.
„	education.
„	local government.
„	agriculture.
„	finance.

§ 14. The Ministry would be called into being as follows.

An officer, presumably the senior commissioner in each Provincial State, would be made the superior officer of the other commissioner or commissioners in that area. As Chief Commissioner he would thus control all the officers in charge of the reserved functions retained by the government of the United Provinces. He would also act as the constitutional head of the Provincial State, that is to say in the capacity of the governor of a province like Quebec or Tasmania. In that capacity he would send for the member of the newly elected assembly who, in his judgement, was best qualified to command the support of that body, and would ask him to form a Ministry.

§ 15. The Ministry, when formed, would then proceed to design departmental machinery suitable for administering the various functions under their portfolios. Their new departments would be staffed from officers taken over from the services of the United Provinces, all existing rights of officers being strictly safeguarded by law. In this operation they would be assisted, not only by the Chief Commissioner, but also by a Civil Service Commission of three, with reference to which we have more to say hereafter. Ministers would not be expected to take over their functions from the old government until the arrangements for the necessary departments were complete.

§ 16. The relations of the Chief Commissioner to his Ministers are of great importance. An undivided responsibility would rest on Ministers, so far as the functions transferred to them are concerned. They would be responsible to the assembly for their decisions, and, provided they were *intra vires*, the Chief Commissioner would have to give legal effect to those decisions by his signature. No responsibility would rest upon him in respect of the transferred powers. But before signing their decisions he would have every opportunity of giving his Ministers advice, and, if they were wise, they would avail themselves of his advice to the full. They would do so the more readily in that an undivided control of their own functions would rest with themselves. They would be responsible to the assembly, and the assembly to the electorate; and a chain of responsibility at once simple and clear, between the elector and the administrative officer, would thus be established.

§ 17. The Chief Commissioner would thus be in a position to guide his Ministers in the execution of the transferred powers by his influence and advice. On the other hand, he would control all the officers of the United Provinces in

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for ensuring the integrity of the financial data and for facilitating the audit process. The document also outlines the specific requirements for record-keeping, including the need to maintain separate records for each account and to ensure that all transactions are properly documented and dated.

The second part of the document provides a detailed overview of the accounting system used by the organization. It describes the various components of the system, including the general ledger, the subsidiary ledgers, and the control accounts. It also explains how the system is used to process transactions and to generate financial statements. The document highlights the strengths of the system and identifies areas for improvement.

The third part of the document discusses the internal controls that are in place to ensure the accuracy and reliability of the financial data. It describes the various controls, including the segregation of duties, the use of authorization, and the implementation of checks and balances. The document also outlines the procedures for monitoring and evaluating the effectiveness of the internal controls and for making any necessary adjustments.

The final part of the document provides a summary of the key findings and recommendations. It emphasizes the importance of maintaining accurate records and of implementing effective internal controls to ensure the integrity of the financial data. It also provides a list of specific recommendations for improving the accounting system and the internal controls.

An officer, presumably the senior commissioner in each Provincial State, would be made the superior officer of the other commissioner or commissioners in that area. As Chief Commissioner he would thus control all the officers in charge of the reserved functions retained by the government of the United Provinces. He would also act as the constitutional head of the Provincial State, that is to say in the capacity of the governor of a province like Quebec or Tasmania. In that capacity he would send for the member of the newly elected assembly who, in his judgement, was best qualified to command the support of that body, and would ask him to form a Ministry.

§ 15. The Ministry, when formed, would then proceed to design departmental machinery suitable for administering the various functions under their portfolios. Their new departments would be staffed from officers taken over from the services of the United Provinces, all existing rights of officers being strictly safeguarded by law. They would do so the more readily in that an undivided control of their own functions would rest with themselves. They would be responsible to the assembly, and the assembly to the electorate; and a chain of responsibility at once simple and clear, between the elector and the administrative officer, would thus be established.

§ 17. The Chief Commissioner would thus be in a position to guide his Ministers in the execution of the transferred powers by his influence and advice. On the other hand, he would control all the officers of the United Provinces in

charge of the reserved functions within the area of the Provincial State. He would thus be well situated to smooth away the causes of friction inevitable between the two authorities. In all federal systems at least two authorities must administer their different functions within the same area, and some friction always exists. Whether the system works or not, simply depends upon the efficacy of the means provided for reducing the friction and of disposing of questions at issue between the two organs of government.

§ 18. We agree that a share of the consolidated revenue of the province should be handed over to the Provincial State governments, proportionate to the cost of the functions transferred to them ; in addition to which should be handed over certain specific powers of taxation, such as would fall on the Provincial State electorate itself.

This is essential to any genuine scheme of responsible government. The electors must learn from experience that, if they demand an extension of services placed under their control, the cost of the extension must also be met from their own resources. This condition is vital to their political training. The taxes imposed by them can still be collected by the existing board of revenue, as happens at present with the cesses imposed by district boards. The taxes, however, imposed by the Provincial State government should be collected from the tax-payer on separate and distinctive notes of demand so that he may clearly recognize that the charge is one imposed by his own representatives.

§ 19. The finances of the Provincial States should be subject to the same audit as those of the United Provinces itself, that is to say, of the Finance Department of the Government of India. The auditors should disallow any expenditure outside the powers of the Provincial State, and institute inquiries, when any trace of corruption is found. They should also disallow all unauthorized expenditure ; but on this, and, generally, on all matters relating to financial administration, they should report direct to the Committee of Public Accounts of the State assembly.

§ 20. The government of the United Provinces might be empowered to make grants-in-aid of certain objects, subject to inspection, the payments to depend upon the Provincial State government having carried out those objects to the satisfaction of the inspectors. But otherwise checks and sanctions in detail should be studiously avoided, for two reasons. In the first place, they are the most fertile cause

charge of the reserved functions within the area of the Provincial State. He would thus be well situated to smooth away the causes of friction inevitable between the two authorities. In all federal systems at least two authorities must administer their different functions within the same area, and some friction always exists. Whether the system works or not, simply depends upon the efficacy of the means provided for reducing the friction and of disposing of questions at issue between the two organs of government.

§ 18. This is essential to any genuine scheme of responsible government. The electors must learn from experience that, if they demand an extension of services placed under their control, the cost of the extension must also be met from their own resources. This condition is vital to their political training. The taxes imposed by them can still be collected by the existing board of revenue, as happens at present with the cesses imposed by district boards. The taxes, however, imposed by the Provincial State government should be collected from the tax-payer on separate and distinctive notes of demand so that he may clearly recognize that the charge is one imposed by his own representatives.

§ 19. The finances of the Provincial States should be subject to the same audit as those of the United Provinces itself, that is to say, of the Finance Department of the Government of India. The auditors should disallow any expenditure outside the powers of the Provincial State, and institute inquiries, when any trace of corruption is found. They should also disallow all unauthorized expenditure ; but on this, and, generally, on all matters relating to financial administration, they should report direct to the Committee of Public Accounts of the State assembly.

§ 20. The government of the United Provinces might be empowered to make grants-in-aid of certain objects, subject to inspection, the payments to depend upon the Provincial State government having carried out those objects to the satisfaction of the inspectors. But otherwise checks and sanctions in detail should be studiously avoided, for two reasons. In the first place, they are the most fertile cause

[illegible]

of friction. In the second place, they undermine the responsibility which ought to rest on the new governments and their electorates. The government of the province will, of course, retain the usual power of veto over legislation passed by Provincial State assemblies; and borrowing would be subject to Government control.

§ 21. Otherwise, we believe, that the one sound and effective check will be found in a power of total suspension held in reserve. If the government of a Provincial State prove its utter incompetence, the assembly should be dissolved, and the issue referred to the electors. If then the electors fail to establish a government competent to put matters straight, and their area remains a scene of neglect, corruption, or disorder, the system must be suspended for that area. The Provincial Government will be there to resume their functions and to set the Provincial State in order, just as is done in the case of Native States, continuing to administer until the time seems ripe for a fresh beginning of responsible government. In the case of civil disorders, brought about by the intolerance of a Provincial State government, there must be powers of summary suspension. We return to this subject also later.

§ 22. The initial experiment would be started for a definite period of, say, seven years. At the end of that period the whole system throughout India would be reviewed by a commission reporting direct to the Secretary of State. The commission should include men who had served as governors of Crown and self-governing colonies. After examining the conditions of each Provincial State on the spot, the commissioners would report whether fresh powers should be granted such as the control of irrigation and forests, of higher education, of local railways, of famine relief, and so forth. Or it might report that the government had done so indifferently that the existing powers should merely be renewed. Lastly, in cases of total failure, it should have powers to report in favour of suspension; but, before the Secretary of State takes final action, the papers should be laid before both Houses of Parliament.

§ 23. It must, at the outset, be laid down that during the seven years' period no claim can be entertained for further administrative powers or a further share of the consolidated revenue of the province. This is essential in the interests of the new electoral bodies themselves. Their whole energies must be reserved for the task of justifying the powers already assigned to them and thus establishing their claim to further

of friction. In the second place, they undermine the responsibility which ought to rest on the new governments and their electorates. The government of the province will, of course, retain the usual power of veto over legislation passed by Provincial State assemblies; and borrowing would be subject to Government control.

§ 21. Otherwise, we believe, that the one sound and effective check will be found in a power of total suspension held in reserve. If the government of a Provincial State prove its utter incompetence, the assembly should be dissolved, and the issue referred to the electors. If then the electors fail to establish a government competent to put matters straight, and their area remains a scene of neglect, corruption, or disorder, the system must be suspended for that area. The Provincial Government will be there to resume their functions and to set the Provincial State in order, just as is done in the case of Native States, continuing to administer until the time seems ripe for a fresh beginning of responsible government. Lastly, in cases of total failure, it should have powers to report in favour of suspension; but, before the Secretary of State takes final action, the papers should be laid before both Houses of Parliament.

§ 23. It must, at the outset, be laid down that during the seven years' period no claim can be entertained for further administrative powers or a further share of the consolidated revenue of the province. This is essential in the interests of the new electoral bodies themselves. Their whole energies must be reserved for the task of justifying the powers already assigned to them and thus establishing their claim to further

powers at the end of the period. If the attention of the electorates is continuously diverted from social reforms to agitation for political change, progress towards responsible government is foredoomed from the outset. The dates at which claims for further changes are to be considered should be fixed in advance, and the machinery whereby those claims are to be decided on the basis of fact and experience should be settled from the outset.

We agree that in the intervening periods no demand for further executive powers or for a further share of existing revenues should be entertained.

§ 24. This does not apply, however, to legislative powers. Again we are keeping in mind the picture of India, as she will be when constitutional finality is attained, and all matters, domestic to India, are subject either to her Provincial State assemblies, or to an Indian parliament. In the work of framing the final constitution, the task of apportioning the legislative powers between the national government on the one hand and those of the Provincial States on the other, will be difficult indeed, unless, during the period of transition, the problem has been worked out and solved by the test of experience. To this end we suggest that Provincial State assemblies shall be encouraged to petition the provincial governments, from time to time, for legislative powers they desire to exercise. The petition would be cast into the form of an enabling Bill submitted to the legislative council of the province. The Bill, after first and second reading, would be referred to a committee upon which the provincial government would appoint a majority of members. The procedure of the committee would be exactly that of a standing committee of Parliament appointed to deal with Bills promoted by local authorities. Counsel would be heard on behalf of the promoters, and of all interests affected by the Bill. The preamble would have to be proved. The clauses would then be considered, passed, negatived, or amended; and evidence for or against the contentions of those promoting the Bill would be heard. The enabling Bill, if passed into an Act, would then define with accuracy the limits within which the Provincial State assembly could legislate on the subject.

§ 25. The same method is applicable to new sources of revenue. A Provincial State government might desire to increase its revenues by a stamp on patent medicines sold within its area. It would then be open to it to embody the

powers at the end of the period. If the attention of the electorates is continuously diverted from social reforms to agitation for political change, progress towards responsible government is foredoomed from the outset. The dates at which claims for further changes are to be considered should be fixed in advance, and the machinery whereby those claims are to be decided on the basis of fact and experience should be settled from the outset.

We agree that in the intervening periods no demand for further executive powers or for a further share of existing revenues should be entertained.

§ 24. This does not apply, however, to legislative powers. Again we are keeping in mind the picture of India, as she will be when constitutional finality is attained, and all matters, domestic to India, are subject either to her Provincial State assemblies, or to an Indian parliament. The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for ensuring the integrity of the financial system and for providing a clear audit trail. The document also highlights the need for transparency and accountability in all financial dealings.

The second part of the document outlines the specific procedures for recording transactions. It details the steps involved in the accounting process, from the initial recording of a transaction to the final posting to the general ledger. The document also provides examples of how to record various types of transactions, such as sales, purchases, and transfers.

The third part of the document discusses the importance of reconciling accounts. It explains that reconciling accounts is a critical step in the accounting process that helps to ensure that the books are balanced and that all transactions are properly recorded. The document also provides a detailed guide to the reconciliation process, including instructions on how to identify and correct discrepancies.

The fourth part of the document discusses the importance of maintaining accurate records of all assets and liabilities. It emphasizes that proper record-keeping is essential for ensuring the accuracy of the financial statements and for providing a clear audit trail. The document also highlights the need for transparency and accountability in all financial dealings.

The fifth part of the document outlines the specific procedures for recording transactions. It details the steps involved in the accounting process, from the initial recording of a transaction to the final posting to the general ledger. The document also provides examples of how to record various types of transactions, such as sales, purchases, and transfers.

The sixth part of the document discusses the importance of reconciling accounts. It explains that reconciling accounts is a critical step in the accounting process that helps to ensure that the books are balanced and that all transactions are properly recorded. The document also provides a detailed guide to the reconciliation process, including instructions on how to identify and correct discrepancies.

The seventh part of the document discusses the importance of maintaining accurate records of all assets and liabilities. It emphasizes that proper record-keeping is essential for ensuring the accuracy of the financial statements and for providing a clear audit trail. The document also highlights the need for transparency and accountability in all financial dealings.

The eighth part of the document outlines the specific procedures for recording transactions. It details the steps involved in the accounting process, from the initial recording of a transaction to the final posting to the general ledger. The document also provides examples of how to record various types of transactions, such as sales, purchases, and transfers.

The ninth part of the document discusses the importance of reconciling accounts. It explains that reconciling accounts is a critical step in the accounting process that helps to ensure that the books are balanced and that all transactions are properly recorded. The document also provides a detailed guide to the reconciliation process, including instructions on how to identify and correct discrepancies.

The tenth part of the document discusses the importance of maintaining accurate records of all assets and liabilities. It emphasizes that proper record-keeping is essential for ensuring the accuracy of the financial statements and for providing a clear audit trail. The document also highlights the need for transparency and accountability in all financial dealings.

proposal in an enabling Bill, and to bring it before the legislative council of the province. Under the Bill, if passed, its assembly would then pass legislation imposing the new tax. Thus by means of experiment, appropriate sources of Provincial State revenue would be discovered.

§ 26. At the close of each period of seven years, the commissioners would review the results, and advise whether the powers so obtained by one Provincial State should be extended to all. The Government of India should be free, at any moment, to generalize such powers by legislation. In this way, whenever the time comes to create a government for India responsible to an Indian electorate, the legislative powers appropriate to the Provincial States will have been ascertained by the only trustworthy tests, those of trial and experience.

§ 27. That time will have arrived whenever a sufficient number of Provincial States have acquired the control of justice, jails, and police and have proved their competence for the fundamental task of government, that of maintaining order. The confirmation of a Provincial State in those powers will amount to a final certificate of the fitness of its electorate for full responsible government. When a sufficient number of Provincial State electorates have acquired that certificate, the time will have come to summon their representatives to a national convention to devise a constitution, under which the Government of India can be made responsible to an Indian parliament and electorate; and the constitution, like those framed by the representatives of the Canadian, Australian, and South African provinces, will acquire legal effect as a statute of the Imperial Parliament. In matters common to all India, responsible government cannot be introduced by stages. It must be introduced at one stroke, by one instrument of government—the constitution of India, under which she will assume her final place in the Commonwealth of Nations. That can only take place when a sufficient number of Provincial States have established and proved their competence for responsible government. The stones will then have been quarried and shaped from which the final edifice can be built.

§ 28. The old provincial governments will, of course, vanish the moment their final powers have passed to their Provincial States. But the question of reforms, such as will fit them to fulfil their transitional functions, is of great importance. Their functions will be to hold and administer the reserved powers until the last final function, that of maintaining

the 1990s, the number of people in the United States who are obese has increased by 50% (Flegal et al. 2002). In addition, the prevalence of obesity in children has increased from 7% in 1980 to 13% in 1994 (Flegal et al. 2002). The prevalence of obesity in the United States is expected to increase to 25% by the year 2010 (Flegal et al. 2002).

Obesity is a risk factor for a number of chronic diseases, including type 2 diabetes, coronary heart disease, stroke, and certain types of cancer (Flegal et al. 2002). Obesity is also a risk factor for a number of mental health problems, including depression, anxiety, and low self-esteem (Flegal et al. 2002). Obesity is a complex condition that is caused by a combination of genetic, environmental, and behavioral factors (Flegal et al. 2002). The most common cause of obesity is a combination of eating too many calories and not getting enough exercise (Flegal et al. 2002).

Obesity is a complex condition that is caused by a combination of genetic, environmental, and behavioral factors (Flegal et al. 2002). The most common cause of obesity is a combination of eating too many calories and not getting enough exercise (Flegal et al. 2002). Obesity is a risk factor for a number of chronic diseases, including type 2 diabetes, coronary heart disease, stroke, and certain types of cancer (Flegal et al. 2002). Obesity is also a risk factor for a number of mental health problems, including depression, anxiety, and low self-esteem (Flegal et al. 2002).

proposal in an enabling Bill, and to bring it before the legislative council of the province. Under the Bill, if passed, its assembly would then pass legislation imposing the new tax. Thus by means of experiment, appropriate sources of Provincial State revenue would be discovered.

§ 26. At the close of each period of seven years, the commissioners would review the results, and advise whether the powers so obtained by one Provincial State should be extended to all. The Government of India should be free, at any moment, to generalize such powers by legislation. In this way, whenever the time comes to create a government for India responsible to an Indian electorate, the legislative powers appropriate to the Provincial States will have been ascertained by the only trustworthy tests, those of trial and experience.

§ 27. That time will have arrived whenever a sufficient number of Provincial States have acquired the control of justice, jails, and police and have proved their competence for the fundamental task of government, that of maintaining order. The confirmation of a Provincial State in those powers will amount to a final certificate of the fitness of its electorate for full responsible government. When a sufficient number of Provincial State electorates have acquired that certificate, the time will have come to summon their representatives to a national convention to devise a constitution, under which the Government of India can be made responsible to an Indian parliament and electorate ; and the constitution, like those framed by the representatives of the Canadian, Australian, and South African provinces, will acquire legal effect as a statute of the Imperial Parliament. In matters common to all India, responsible government cannot be introduced by stages. It must be introduced at one stroke, by one instrument of government—the constitution of India, under which she will assume her final place in the Commonwealth of Nations. That can only take place when a sufficient number of Provincial States have established and proved their competence for responsible government. The stones will then have been quarried and shaped from which the final edifice can be built.

§ 28. The old provincial governments will, of course, vanish the moment their final powers have passed to their Provincial States. But the question of reforms, such as will fit them to fulfil their transitional functions, is of great importance. Their functions will be to hold and administer the reserved powers until the last final function, that of maintaining

order, can be handed over. But another and even more important function will be that of supervising the acquisition by the Provincial States of new legislative powers and sources of revenue, which, of course, they will do subject to the direction of the Government of India.

§ 29. As stated already, we assume that Executive Councils will be established in all but the minor provinces, one half of which will be Indian, a majority being retained for the European members by the governor's casting vote.

§ 30. The legislative councils should be composed mainly of delegations from the assemblies of the Provincial States, together with some additional members appointed by government to represent special interests. There is nothing to prevent the introduction of officials at any time who are required to discuss matters within their expert knowledge. But official voters should vanish. The existing system of official members voting by order, irrespective of their personal views, is derogatory to their own position, wasteful of their valuable time, fatal to principles which should govern public debate, and eminently calculated to create a feeling of antagonism between Indians and Europeans as such. It is also insincere. If government cannot accept a motion of whatever kind, let the governor say so, and let that suffice. A final difference of opinion between the government responsible to the Secretary of State and the spokesmen of public opinion is not mended by the practice of annulling the votes of elected members by those of officials cast under orders of government. Let the councils consist entirely of non-official members, the members of the executive council and such other officials as they choose to bring with them appearing only for the purposes of debate. Let every detail of administration, of legislation, and of the estimates be brought before the legislative council for discussion. Let the work of government be exposed to unofficial criticism and influence from end to end. The onus of final decision in matters for which the executives are responsible to the Government of India and to the Secretary of State rests with them, subject, of course, to the provision that those superior authorities can always reverse the decision of their agents, on petition from the legislative councils. Just as the responsibility of the Provincial State Ministers to their assemblies and electorates must be unhampered and clear, so also must be that of the provincial executives to the Government of India and the Secretary of State.

§ 31. That the two principles are inseparable will be seen

order, can be handed over. But another and even more important function will be that of supervising the acquisition by the Provincial States of new legislative powers and sources of revenue, which, of course, they will do subject to the direction of the Government of India.

§ 29. As stated already, we assume that Executive Councils will be established in all but the minor provinces, one half of which will be Indian, a majority being retained for the European members by the governor's casting vote.

§ 30. The legislative councils should be composed mainly of delegations from the assemblies of the Provincial States, together with some additional members appointed by government to represent special interests. There is nothing to prevent the introduction of officials at any time who are required to discuss matters within their expert knowledge. But official voters should vanish. The existing system of official members voting by order, irrespective of their personal views, is derogatory to their own position, wasteful of their valuable time, fatal to principles which should govern public debate, and eminently calculated to create a feeling of antagonism between Indians and Europeans as such. It is also insincere. If government cannot accept a motion of whatever kind, let the governor say so, and let that suffice. A final difference of opinion between the government responsible to the Secretary of State and the spokesmen of public opinion is not mended by the practice of annulling the votes of elected members by those of officials cast under orders of government. Let the councils consist entirely of non-official members, the members of the executive council and such other officials as they choose to bring with them appearing only for the purposes of debate. Let the work of government be exposed to unofficial criticism and influence from end to end. The onus of final decision in matters for which the executives are responsible to the Government of India and to the Secretary of State rests with them, subject, of course, to the provision that those superior authorities can always reverse the decision of their agents, on petition from the legislative councils. Just as the responsibility of the Provincial State Ministers to their assemblies and electorates must be unhampered and clear, so also must be that of the provincial executives to the Government of India and the Secretary of State.

§ 31. That the two principles are inseparable will be seen

by reference to the procedure whereby the legislative councils will deal with enabling Bills promoted by governments of Provincial States. The legislative councils will consist of delegations from Provincial State assemblies, one of which is promoting the Bill. A legislative council so formed will be likely to voice every kind of opinion which may be held with regard to the new powers demanded. On second reading, on report stage, and on third reading, as well as in the select committee, its members will have every opportunity for doing so. Government will thus have access to every phase of public opinion on the subject, as well as to the views of the Government of India, which will hold a brief for the future federal Government of India. But clearly the power of final decision on any disputed point could not be left with the spokesmen of the Provincial State assemblies. The system will not work, unless the responsibility of either authority for the functions assigned to it is real; which cannot be, unless its power is equivalent to its responsibility. The most important of all the responsibilities reserved to the old governments in the transitional stage is that 'of judging of the time and measure of each advance'.

§ 32. We consider that the Imperial Legislative Council should be reformed on the same principles. The official votes should vanish and the members should be largely recruited by proportional representation from the Provincial State assemblies and other public bodies as at present.

§ 33. As the transfer of officers is likely to prove more delicate and difficult than the transfer of powers, the subject has been left for separate treatment. Our view is that there should be attached to the Government of India and to the government of each province a standing commission of three senior officers, one of whom should always be an Indian. These commissioners should inspect and be cognizant of the work of every department, and of every officer in those departments. It should be their duty to bring to the notice of government all cases of over or under employment, of overlapping and of all defects in organization. They would serve in fact as the consulting engineers of the administrative machine. They would have no powers but those of report. It would rest with governments to give effect to their recommendations. A vast human machine, which is always being changed and increased, requires continuous inspection by experts who stand outside it and view it as a whole. Government which is part of the mechanism has no time to do this; and, without the advice

The legislative councils will consist of delegations from Provincial State assemblies, one of which is promoting the Bill. A legislative council so formed will be likely to voice every kind of opinion which may be held with regard to the new powers demanded. On second reading, on report stage, and on third reading, as well as in the select committee, its members will have every opportunity for doing so. Government will thus have access to every phase of public opinion on the subject, as well as to the views of the Government of India, which will hold a brief for the future federal Government of India. But clearly the power of final decision on any disputed point could not be left with the spokesmen of the Provincial State assemblies. The system will not work, unless the responsibility of either authority for the functions assigned to it is real; which cannot be, unless its power is equivalent to its responsibility. The most important of all the responsibilities reserved to the old governments in the transitional stage is that 'of judging of the time and measure of each advance'.

§ 32. We consider that the Imperial Legislative Council should be reformed on the same principles. The official votes should vanish and the members should be largely recruited by proportional representation from the Provincial State assemblies and other public bodies as at present.

§ 33. As the transfer of officers is likely to prove more delicate and difficult than the transfer of powers, the subject has been left for separate treatment. Our view is that there should be attached to the Government of India and to the government of each province a standing commission of three senior officers, one of whom should always be an Indian. These commissioners should inspect and be cognizant of the work of every department, and of every officer in those departments. It should be their duty to bring to the notice of government all cases of over or under employment, of overlapping and of all defects in organization. They would serve in fact as the consulting engineers of the administrative machine. They would have no powers but those of report. It would rest with governments to give effect to their recommendations. A vast human machine, which is always being changed and increased, requires continuous inspection by experts who stand outside it and view it as a whole. Government which is part of the mechanism has no time to do this; and, without the advice

of such experts, the gradual adjustments required to keep it in gear, and to avoid overlapping and waste, are not perceived and made in time. When the whole structure has grown thoroughly obsolete and clearly unsuited to public needs, a civil service commission is appointed, largely consisting of amateurs. An elaborate inquiry is undertaken at vast expense. Questions are asked which are difficult for officials to answer with honesty in public. A great strain is put on their time and a great disturbance of the public mind is occasioned. Their recommendations involve changes so great that it is very difficult to carry them into effect, whereas those changes, if effected gradually, as the need had arisen, could easily have been made.

This is one aspect of the permanent civil service commission which exists in the Dominions. But there is another and even more important feature of the institution as it exists in Australia and New Zealand. Appointments and promotions are, of course, made by the government, but on the advice of the commissioners. Government is not bound to take their advice, but if it departs therefrom, it is bound to record its reasons for the information of the legislature. The plan has been devised to relieve government of the demoralizing burden of patronage, which consumes the time and energy of its members urgently needed for administrative work. In effecting this object, the permanent advisory commission has proved successful.

•In India, we think that all appointments should be made on the advice of such commissioners. Three should be attached to the Government of India, and three to each of the provinces. Where the Government of India or provincial governments depart from their advice, their reasons should be recorded for the information of the Secretary of State; where Provincial State Ministers are unable to take their advice, their reasons should be recorded and submitted to their Legislative assemblies.

The standing commissions would play an important part in the transfer of officers to the departments of the new elective authorities. Such transfers would be voluntary so far as is possible. Ministers, with the advice and assistance of the chief commissioner, would arrange for the voluntary transfer of officers from the old departments to their own. But where voluntary arrangements failed, the transfer would be effected on the advice of the commissioners, to which effect would be given by the provincial government,

of such experts, the gradual adjustments required to keep it in gear, and to avoid overlapping and waste, are not perceived and made in time. When the whole structure has grown thoroughly obsolete and clearly unsuited to public needs, a civil service commission is appointed, largely consisting of amateurs. But where voluntary arrangements failed, the transfer would be effected on the advice of the commissioners, to which effect would be given by the provincial government,

subject to the conditions specified above. The organization of the new departments would also proceed subject to the expert advice of the commissioners.

C.—Safeguards.

§ 34. We have outlined a scheme such as we think is capable of being adapted to varying conditions in the different provinces of British India. But wherever, as in Bengal, there exist commercial and industrial interests representing great investments of capital, we consider that special safeguards are necessary, less in the interests of the investors than of the people of India themselves. Responsible government cannot be initiated or advanced without an increase of public expenditure. A development of natural resources is essential in order to provide the additional revenue. But development requires a free investment of capital from without, and nothing could be more fatal to the prospects of such investment than to allow an impression, however unfounded, to take root at this juncture that existing investments of capital are not secure. Unless special safeguards are provided at the outset, fears will exist in the money markets of the world that existing interests may be subject to injury, either by reason of predatory or regulative legislation, or by reason of neglect of transportation and other facilities. It is wise to allay these fears at the outset.

In the first place, all legislation will be subject to the veto of the Indian and provincial governments subject to the Secretary of State. In Dominion constitutions, the Acts of Parliament, embodying the powers of the Dominion governments, do not include most important constitutional provisions, those governing the relations of the Dominion to the Imperial Government. Such provisions will be found in the instructions issued to the governors by the Imperial Government.

It is in instructions issued by the Imperial Government to the Government of India, that securities against legislation injurious to commercial and industrial interests can be given. In these instructions it should be laid down that legislation affecting commercial and industrial undertakings should be reserved for the sanction of the Secretary of State, and a limit of time should be laid down, within which representatives from the interests affected can be received by him.

We agree that instructions to this effect should be included in a schedule attached to the Act of Parliament in which the scheme of reforms is embodied.

subject to the conditions specified above. The organization of the new departments would also proceed subject to the expert advice of the commissioners.

C.—Safeguards.

§ 34. We have outlined a scheme such as we think is capable of being adapted to varying conditions in the different provinces of British India. In these instructions it should be laid down that legislation affecting commercial and industrial undertakings should be reserved for the sanction of the Secretary of State, and a limit of time should be laid down, within which representatives from the interests affected can be received by him.

We agree that instructions to this effect should be included in a schedule attached to the Act of Parliament in which the scheme of reforms is embodied.

§ 35. This will not, however, allay the fears of those who have invested their capital in plantations and other industrial undertakings scattered about the country, lest the value of their property may be ruined by neglect of transportation facilities, of protection from flood, water-supply, and of other public utilities.

Where damage to industrial interests from such neglect can be proved, the provincial government should have power to step in, and do the necessary work at the cost of the Provincial State government in default. Throughout the period of transition the provincial government responsible to the Secretary of State will be in existence and in a position to provide the necessary remedy. That government will vanish only when the Provincial State governments within its jurisdiction have finally proved their capacity for efficient administration. The final certificate of efficiency would not be given to a Provincial State government, so long as it showed a tendency to neglect public utilities upon which the value of capital invested on productive undertakings in their area depends.

We agree that the provincial governments responsible to the Government of India and the Secretary of State shall have power to do or repair public works, upon which the value of invested capital depends, neglect of which is due to the default of Provincial State governments, and to charge the cost thereof to the revenues assigned to the government in default.

§ 36. In this connexion we return to the final remedy of recalling powers and of total suspension. It is, however, mainly with a view to the progress of responsible government itself, that we urge that these safeguards should be made real. If India is to move as quickly as possible towards the goal of complete responsible government, each part of India must, in the stage of transition, be enabled to move at its own pace. Government must be ready to reward proof of efficiency in administering powers already granted by a generous transfer of fresh powers. The whole system rests on the principle of placing responsible governments on trial, testing capacity, and making recorded experience the ground of future advance. Such advances should be bold ; but advances will not be bold, unless it is understood from the outset that, where steps in advance have clearly been premature, they can be retraced. Experiment is the only sound basis of policy ; but no experiment is real, unless government is able to abide by negative as well as by positive

§ 35. § 36. In this connexion we return to the final remedy of recalling powers and of total suspension. It is, however, mainly with a view to the progress of responsible government itself, that we urge that these safeguards should be made real. If India is to move as quickly as possible towards the goal of complete responsible government, each part of India must, in the stage of transition, be enabled to move at its own pace. Government must be ready to reward proof of efficiency in administering powers already granted by a generous transfer of fresh powers. The whole system rests on the principle of placing responsible governments on trial, testing capacity, and making recorded experience the ground of future advance. Such advances should be bold ; but advances will not be bold, unless it is understood from the outset that, where steps in advance have clearly been premature, they can be retraced. Experiment is the only sound basis of policy ; but no experiment is real, unless government is able to abide by negative as well as by positive

results. Government will make experiments freely, only if it knows that it can and must give practical effect to lessons of failure as well as to those of success. If the right of recall be established, government should be bold in adding to the powers of progressive electoral authorities. For the rapid advance towards full responsible government of some Provincial States will certainly react on their backward neighbours. Nothing is more contagious than example, and it is to the forward States that we look to set the pace of progress. It should, therefore, be made as safe and easy as possible for government at stated intervals to add to the powers.

For similar reasons the power of total suspension held in reserve is important. The existence of the power, in fact as well as in law, will largely operate to render its use unnecessary. If the Imperial veto on colonial legislation is rarely exercised, it is largely because the power, unlike that of the Sovereign, is a real one. Colonial ministers refuse to accept amendments from their own supporters when they know that such amendments, if incorporated in a measure before the legislature, would oblige the Imperial Government to veto it.

In like manner the public disgrace, inseparable from suspension, will act as a spur to the ministers, assemblies, and electorates of backward Provincial States, and prevent their allowing the standard of government from degenerating to the point when total suspension is obviously needed in the public interest. Neglect and corruption cannot continue to flourish unchecked in one Provincial State without reacting on the progress of the others. Positive anarchy is infectious and spreads to its neighbours. Just as a progressive State will stimulate progress in those behind it, so a total failure will impede the progress of those in advance of it. The best hope for such a community is the total suspension of its incapable régime as in the case of a Native State, where anarchy is rampant. Corruption must be weeded out, injustice must be redressed, public utilities must be restored, and a clean and efficient standard of government re-established, before the community is allowed to begin once more an attempt to do these things for itself. It is on the same principle that in the United Kingdom a constituency, provenly corrupt, is disenfranchised for a period of years.

We agree that the Government of India must have the right to recall powers which have been abused or neglected, and, in

[illegible]

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.001	0.000	1.23	0.221
Gender of the head of household (Male = 1, Female = 0)	-0.050	0.010	-5.00	0.000
Constant	1.500	0.100	15.00	0.000

The regression results indicate that the number of children in the household is positively related to the age of the head of household, but the relationship is not statistically significant at the 5% level (p = 0.221). The gender of the head of household is negatively related to the number of children in the household, and this relationship is statistically significant at the 5% level (p = 0.000). The constant term is 1.500, indicating that the expected number of children in the household is 1.500 when the age of the head of household is zero and the gender of the head of household is female.

Abstract

100

[illegible]

results. Government will make experiments freely, only if it knows that it can and must give practical effect to lessons of failure as well as to those of success. If the right of recall be established, government should be bold in adding to the powers of progressive electoral authorities. For the rapid advance towards full responsible government of some Provincial States will certainly react on their backward neighbours. Nothing is more contagious than example, and it is to the forward States that we look to set the pace of progress. It should, therefore, be made as safe and easy as possible for government at stated intervals to add to the powers.

For similar reasons the power of total suspension held in reserve is important. The existence of the power, in fact as well as in law, will largely operate to render its use unnecessary. If the Imperial veto on colonial legislation is rarely exercised, it is largely because the power, unlike that of the Sovereign, is a real one. Colonial ministers refuse to accept amendments from their own supporters when they know that such amendments, if incorporated in a measure before the legislature, would oblige the Imperial Government to veto it.

In like manner the public disgrace, inseparable from suspension, will act as a spur to the ministers, assemblies, and electorates of backward Provincial States, and prevent their allowing the standard of government from degenerating to the point when total suspension is obviously needed in the public interest. Neglect and corruption cannot continue to flourish unchecked in one Provincial State without reacting on the progress of the others. Positive anarchy is infectious and spreads to its neighbours. Just as a progressive State will stimulate progress in those behind it, so a total failure will impede the progress of those in advance of it. The best hope for such a community is the total suspension of its incapable régime as in the case of a Native State, where anarchy is rampant. Corruption must be weeded out, injustice must be redressed, public utilities must be restored, and a clean and efficient standard of government re-established, before the community is allowed to begin once more an attempt to do these things for itself. It is on the same principle that in the United Kingdom a constituency, provenly corrupt, is disenfranchised for a period of years.

We agree that the Government of India must have the right to recall powers which have been abused or neglected, and, in

extreme cases, to suspend the governments of Provincial States. Such powers shall always be subject to the sanction of the Secretary of State and of Parliament ; but in cases of emergency the Government of India may exercise the power, subject to the subsequent sanction of the Secretary of State and of Parliament.

§ 37. Lastly, it is necessary to consider how an adequate representation can be secured for those in charge of commercial and industrial undertakings. These are largely financed from capital outside India, and are mainly administered by Europeans. They are in number a mere handful, but, in the interests of the new elective authorities, it is essential that they should be represented in some proportion to the magnitude of the interests they control. It would be a calamity to India if they drifted into the position of Uitlanders. Their assistance is needed in building up the fabric of responsible government. Provincial State Ministries and assemblies will have everything to gain by an adequate infusion of a race to whom the working of responsible government is familiar.

We agree that : (a) wherever industrial and commercial interests are located, an adequate representation should be accorded ; (b) adequate representation should be accorded to Mohammedans, land-holders, and minorities generally.

D.—Procedure to be followed in giving effect to the scheme.

§ 38. The question will naturally be raised how effect can be given to the provisions set out at the end of the last section. The same question arises with regard to a number of other provisions recommended in this note. Any scheme, which suggests at this juncture how India can start on her progress towards responsible government, is open to the same criticism. The new pronouncement was only made on the 20th of August last, and the Secretary of State has reached India within three months from that date. It is utterly beyond the power, even of skilled and experienced officials, to collect within that time the facts and figures necessary before the details of proposals can be worked out. Nor, we venture to predict, will the Secretary of State himself be able to do this, with all the assistance which the Government of India can give him. The short time at his disposal here will be more than occupied with the study of principles, and if any attempt is afterwards made to work these principles into a complete scheme in London, we believe that it will fail for lack of detailed information, which can only be

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million. The number of people who are malnourished has increased from 1.2 billion to 1.6 billion. The number of people who are obese has increased from 100 million to 200 million. The number of people who are overweight has increased from 100 million to 200 million.

The World Bank has estimated that the number of people who are undernourished in the world will increase from 800 million in 1990 to 1.2 billion in 2020. The number of people who are malnourished will increase from 1.6 billion in 1990 to 2.4 billion in 2020. The number of people who are obese will increase from 200 million in 1990 to 400 million in 2020. The number of people who are overweight will increase from 200 million in 1990 to 400 million in 2020. The World Bank has also estimated that the number of people who are undernourished in the world will increase from 800 million in 1990 to 1.2 billion in 2020. The number of people who are malnourished will increase from 1.6 billion in 1990 to 2.4 billion in 2020. The number of people who are obese will increase from 200 million in 1990 to 400 million in 2020. The number of people who are overweight will increase from 200 million in 1990 to 400 million in 2020.

The World Bank has also estimated that the number of people who are undernourished in the world will increase from 800 million in 1990 to 1.2 billion in 2020. The number of people who are malnourished will increase from 1.6 billion in 1990 to 2.4 billion in 2020. The number of people who are obese will increase from 200 million in 1990 to 400 million in 2020. The number of people who are overweight will increase from 200 million in 1990 to 400 million in 2020. The World Bank has also estimated that the number of people who are undernourished in the world will increase from 800 million in 1990 to 1.2 billion in 2020. The number of people who are malnourished will increase from 1.6 billion in 1990 to 2.4 billion in 2020. The number of people who are obese will increase from 200 million in 1990 to 400 million in 2020. The number of people who are overweight will increase from 200 million in 1990 to 400 million in 2020.

extreme cases, to suspend the governments of Provincial States. Such powers shall always be subject to the sanction of the Secretary of State and of Parliament ; but in cases of emergency the Government of India may exercise the power, subject to the subsequent sanction of the Secretary of State and of Parliament.

§ 37. Lastly, it is necessary to consider how an adequate representation can be secured for those in charge of commercial and industrial undertakings. These are largely financed from capital outside India, and are mainly administered by Europeans. They are in number a mere handful, but, in the interests of the new elective authorities, it is essential that they should be represented in some proportion to the magnitude of the interests they control. It would be a calamity to India if they drifted into the position of Uitlanders. Their assistance is needed in building up the fabric of responsible government. Provincial State Ministries and assemblies will have everything to gain by an adequate infusion of a race to whom the working of responsible government is familiar.

We agree that : (a) wherever industrial and commercial interests are located, an adequate representation should be accorded ; (b) adequate representation should be accorded to Mohammedans, land-holders, and minorities generally.

D.—Procedure to be followed in giving effect to the scheme.

§ 38. The question will naturally be raised how effect can be given to the provisions set out at the end of the last section. The same question arises with regard to a number of other provisions recommended in this note. Any scheme, which suggests at this juncture how India can start on her progress towards responsible government, is open to the same criticism. The new pronouncement was only made on the 20th of August last, and the Secretary of State has reached India within three months from that date. It is utterly beyond the power, even of skilled and experienced officials, to collect within that time the facts and figures necessary before the details of proposals can be worked out. Nor, we venture to predict, will the Secretary of State himself be able to do this, with all the assistance which the Government of India can give him. The short time at his disposal here will be more than occupied with the study of principles, and if any attempt is afterwards made to work these principles into a complete scheme in London, we believe that it will fail for lack of detailed information, which can only be

obtained on the spot. Such failure will mean delay, and delay will not be understood in India. It will surely breed distrust and continued agitation. The greatest need of India is that prompt and unmistakable steps should be taken to give effect to the policy outlined in the recent pronouncements. The only way in which this can be done, is by the early enactment of a measure by Parliament such as will set in train the progress of India towards responsible government there foreshadowed.

§ 39. The solution of the problem, we suggest, will be found in the precedent set by the Government of London Act of 1899. By this measure it was proposed to abolish more than forty vestries, and establish in their place a far smaller number of municipal bodies. The whole scheme, including the constitution of the new bodies, was firmly outlined in the measure. Yet the Parliamentary draftsman, situated as he was in the middle of the subject dealt with by the measure, with all the forces of the Local Government Board, the Home Office, the London County Council, the City of London, and the Vestries at his disposal, was unable to cope with the innumerable details which had to be worked out before effect could be given to its provisions. In order to bring the new bodies into existence, it was necessary to delimit areas, fix the number of members on the various bodies, adjust their finances, and disentangle and rearrange a multitude of details. All this was remitted to three commissioners named and appointed under the Act. The moment the Act was passed the commissioners got to work, and, as their arrangements were framed, legal effect was given to them by Orders in Council issued in terms of its provisions.

We believe that the adoption of this course is the only way to avoid a delay which will prove mischievous in the extreme to the peace and interests of India. It is not delay in bringing into being the new organs of government that we fear. That of necessity is a task the details of which need time for their execution. Any attempt to burke those details will only end in further postponement. The delay, we fear, is in framing a measure which the Imperial Government can adopt for submission to Parliament, and in the passage of that measure into law. The trust of India in Parliament is unimpaired, and if once the scheme of reforms is firmly outlined in statutory form, and commissioners are appointed to give effect to it, the people of India will not be found wanting in patience. Their energies will, we think, be devoted to aiding the government and commis-

obtained on the spot. Such failure will mean delay, and delay will not be understood in India. It will surely breed distrust and continued agitation. The greatest need of India is that prompt and unmistakable steps should be taken to give effect to the policy outlined in the recent pronouncements. The only way in which this can be done, is by the early enactment of a measure by Parliament such as will set in train the progress of India towards responsible government there foreshadowed.

§ 39. The solution of the problem, we suggest, will be found in the precedent set by the Government of London Act of 1899. By this measure it was proposed to abolish more than forty vestries, and establish in their place a far smaller number of municipal bodies. The whole scheme, including the constitution of the new bodies, was firmly outlined in the measure. Yet the Parliamentary draftsman, situated as he was in the middle of the subject dealt with by the measure, with all the forces of the Local Government Board, the Home Office, the London County Council, the City of London, and the Vestries at his disposal, was unable to cope with the innumerable details which had to be worked out before effect could be given to its provisions. In order to bring the new bodies into existence, it was necessary to delimit areas, fix the number of members on the various bodies, adjust their finances, and disentangle and rearrange a multitude of details. All this was remitted to three commissioners named and appointed under the Act. The moment the Act was passed the commissioners got to work, and, as their arrangements were framed, legal effect was given to them by Orders in Council issued in terms of its provisions.

We believe that the adoption of this course is the only way to avoid a delay which will prove mischievous in the extreme to the peace and interests of India. It is not delay in bringing into being the new organs of government that we fear. That of necessity is a task the details of which need time for their execution. Any attempt to burke those details will only end in further postponement. The delay, we fear, is in framing a measure which the Imperial Government can adopt for submission to Parliament, and in the passage of that measure into law. The trust of India in Parliament is unimpaired, and if once the scheme of reforms is firmly outlined in statutory form, and commissioners are appointed to give effect to it, the people of India will not be found wanting in patience. Their energies will, we think, be devoted to aiding the government and commis-

sioners in working out the details and carrying them into effect.

We agree, therefore, in advising that the specific points to which our agreement relates and the outlines of the scheme sketched in these proposals be laid down in an Act of Parliament ; but that all questions, within those outlines relating to franchises, constitutions, powers, finances, and such like details be remitted to not more than five commissioners named under the Act, to be dealt with in India by the commissioners, in consultation with governments and people, the arrangements of the commissioners, to be given the force of law by Orders in Council.

§ 40. The goal of responsible government having now been declared, the scheme should, in our opinion, be one which initiates not only the immediate steps, but renders visible to the people of India the whole path to the ultimate goal. We urge that the measures should be such as will leave no room for constitutional agitation, either now, or at any future time. It should set them free to devote their whole strength to social and political reform, by placing political as well as social reform within their reach. The situation we desire is one in which communities in all parts of British India can attain to new political powers, always, but only, by proving their fitness to exercise those they already possess, and will lead, as quickly as those proofs can be given, to a complete and final attainment of their status as the greatest Dominion in the British Commonwealth. It is to that end that we, British and Indians, have framed these proposals. We desire that the foundations of responsible government in India should be laid in trust and amity between her people and those whose forefathers have given this system to the world, that our enemies may learn that we know how to realize its principles, as well as to defend them. We, therefore, unite to submit this scheme, believing that so, in the Providence of God, a corner-stone may be laid in this Commonwealth of Nations for the perpetual union of East and West.

With regard to the details of the scheme outlined above, we think that it is desirable that every one should reserve full liberty of judgement. Our agreement relates only to the following specific points :

We agree—

- (1) to accept the pronouncement of August 20 as common ground, within the limits of which the discussion can take place ;

sioners in working out the details and carrying them into effect.

We agree, therefore, in advising that the specific points to which our agreement relates and the outlines of the scheme sketched in these proposals be laid down in an Act of Parliament ; but that all questions, within those outlines relating to franchises, constitutions, powers, finances, and such like details be remitted to not more than five commissioners named under the Act, to be dealt with in India by the commissioners, in consultation with governments and people, the arrangements of the commissioners, to be given the force of law by Orders in Council.

§ 40. The goal of responsible government having now been declared, the scheme should, in our opinion, be one which initiates not only the immediate steps, but renders visible to the people of India the whole path to the ultimate goal. We urge that the measures should be such as will leave no room for constitutional agitation, either now, or at any future time. It should set them free to devote their whole strength to social and political reform, by placing political as well as social reform within their reach. The situation we desire is one in which communities in all parts of British India can attain to new political powers, always, but only, by proving their fitness to exercise those they already possess, and will lead, as quickly as those proofs can be given, to a complete and final attainment of their status as the greatest Dominion in the British Commonwealth. It is to that end that we, British and Indians, have framed these proposals. We desire that the foundations of responsible government in India should be laid in trust and amity between her people and those whose forefathers have given this system to the world, that our enemies may learn that we know how to realize its principles, as well as to defend them. We, therefore, unite to submit this scheme, believing that so, in the Providence of God, a corner-stone may be laid in this Commonwealth of Nations for the perpetual union of East and West.

With regard to the details of the scheme outlined above, we think that it is desirable that every one should reserve full liberty of judgement. Our agreement relates only to the following specific points :

We agree—

- (1) to accept the pronouncement of August 20 as common ground, within the limits of which the discussion can take place ;

- (2) that, having accepted the pronouncement, we are not only free, but also bound to consider the new situation created thereby with open minds ;
- (3) that the existing provinces need not be assumed to be areas suitable as a basis for responsible government, but such areas must be settled at the moment when the first instalment of responsible government is granted ;
- (4) that the first steps towards responsible government cannot be taken in the sphere of the central government ;
- (5) that, during the period of transition, governments of two types must co-exist, the one responsible to electorates for specific powers, the other to the Secretary of State for all other powers ; that the responsibility of each must in fact be a real one, and their powers must be sufficient to enable them to discharge that responsibility efficiently ;
- (6) that a share of the consolidated revenue of the province should be handed over to the Provincial State governments, proportionate to the cost of the functions transferred to them ; in addition to which should be handed over certain specific powers of taxation, such as would fall on the Provincial State electorate itself ;
- (7) that further additions to the powers of Provincial States, and to their share of existing provincial revenues should be considered by commissioners reporting direct to Parliament, at intervals of, say, seven years, such interval to be specified at the outset ; and that in the intervening periods no demand for further executive powers, or for a further share of existing revenues, should be entertained ;
- (8) that legislation passed by Provincial State governments affecting commercial and industrial undertakings should be reserved for the sanction of the Secretary of State ; and a limit of time should be laid down, within which representations from the interests affected can be received by him ; and further, that instructions to this effect should be included in a schedule attached to the Act of Parliament in which the scheme of reforms is embodied ;
- (9) that the provincial governments, responsible to the Government of India and the Secretary of State, shall

- (2) that, having accepted the pronouncement, we are not only free, but also bound to consider the new situation created thereby with open minds ;
- (3) that the existing provinces need not be assumed to be areas suitable as a basis for responsible government, but such areas must be settled at the moment when the first instalment of responsible government is granted ;
- (4) that the first steps towards responsible government cannot be taken in the sphere of the central government ;
- (5) that, during the period of transition, governments of two types must co-exist, the one responsible to electorates for specific powers, the other to the Secretary of State for all other powers ; that the responsibility of each must in fact be a real one, and their powers must be sufficient to enable them to discharge that responsibility efficiently ;
- (6) that a share of the consolidated revenue of the province should be handed over to the Provincial State governments, proportionate to the cost of the functions transferred to them ; in addition to which should be handed over certain specific powers of taxation, such as would fall on the Provincial State electorate itself ;
- (7) that further additions to the powers of Provincial States, and to their share of existing provincial revenues should be considered by commissioners reporting direct to Parliament, at intervals of, say, seven years, such interval to be specified at the outset ; and that in the intervening periods no demand for further executive powers, or for a further share of existing revenues, should be entertained ;
- (8) that legislation passed by Provincial State governments affecting commercial and industrial undertakings should be reserved for the sanction of the Secretary of State ; and a limit of time should be laid down, within which representations from the interests affected can be received by him ; and further, that instructions to this effect should be included in a schedule attached to the Act of Parliament in which the scheme of reforms is embodied ;
- (9) that the provincial governments, responsible to the Government of India and the Secretary of State, shall

have power to do or repair public works, upon which the value of invested capital depends, neglect of which is due to the default of Provincial State governments, and to charge the cost thereof to the revenues assigned to the government in default ;

- (10) that the Government of India must have the right to recall powers which have been abused or neglected ; and in extreme cases to suspend the governments of Provincial States. Such powers shall always be subject to the sanction of the Secretary of State and of Parliament ; but in cases of emergency the Government of India may exercise the power, subject to subsequent sanction of the Secretary of State and of Parliament ;
- (11) that (a) wherever industrial and commercial interests are located, adequate representation should be accorded ; (b) adequate representation should be accorded to Mohammedans, land-holders, and minorities generally ;
- (12) that the specific points to which our agreement relates and the outlines of the scheme sketched in these proposals be laid down in an Act of Parliament ; but that all questions within those outlines, relating to franchises, constitutions, powers, finances, and such like details be remitted to not more than five commissioners named under the Act, to be dealt with in India by the commissioners, in consultation with governments and people, the arrangements of the commissioners to be given the force of law by Orders in Council.

1. The first part of the text discusses the importance of maintaining accurate records of all transactions, including sales, purchases, and expenses. It emphasizes that proper record-keeping is essential for determining the correct amount of tax liability and for defending against potential audits.

2. The second part of the text describes the various methods used to calculate taxable income, including the use of standard deductions, itemized deductions, and exemptions. It also discusses the impact of different tax rates and the timing of income and deductions on the overall tax liability.

3. The third part of the text discusses the various tax credits and deductions available to taxpayers, including the earned income tax credit, the child tax credit, and the research and development credit. It also discusses the impact of these credits and deductions on the overall tax liability.

4. The fourth part of the text discusses the various tax planning strategies available to taxpayers, including the use of capital gains, the deferral of income, and the use of tax-exempt investments. It also discusses the impact of these strategies on the overall tax liability.

The following letters are appended for general information :

November 15, 1917.

MY DEAR PUGH,

With reference to the note embodying certain proposals to be made jointly by certain Indian and European gentlemen to the Secretary of State, I am not qualified to pronounce an opinion on their feasibility, and I cannot say

anything about them at all as representing the Chamber of Commerce ; but as a private individual they seem to me to offer a fair basis for a scheme of constitutional change which should mark a great advance on the road to representative government for this country, and should at the same time afford protection for the minorities who are at present feeling anxiety on the subject.

HUGH BRAY.

November 15, 1917.

MY DEAR PUGH,

With reference to the note on the future system of government in India which you have shown me, and which you and other Europeans have discussed with certain Indians, the position of the European Association is, as you are aware, that a memorandum expressing the views of the Central Council and the delegates appointed by the various branch councils had already been drawn up and submitted to government.

The note undoubtedly creates a new situation, and calls for the careful consideration of the association. I am therefore proposing to communicate at once with the different branches with the object of endeavouring to arrange for a second conference in Calcutta for the discussion of the scheme. I am hoping this may be found feasible in time for the views of the conference to be formulated prior to Mr. Montagu's arrival here.

Yours sincerely,
A. BIRKMYRE.

November 18, 1917.

MY DEAR PUGH,

I think there is no reason why the whole of the provincial governments should not be made responsible to the people in the different provinces. But in view of the differences of opinion that exist among different communities, a scheme such as this calls for the careful consideration of all parties and communities. It is certainly desirable, as I said before, that in a matter like this all parties should co-operate and try and come to a common understanding. I have no doubt that the Bengal Provincial Conference which meets in Calcutta at an early date will fully and carefully consider this.

Yours sincerely,
C. R. DAS.

LETTERS TO THE PEOPLE OF INDIA ON RESPONSIBLE GOVERNMENT (December 1917)

LETTER I

THE MEANING OF WORDS

§ 1. WHEN I first reached India in October 1916, there were two subjects of general discussion. One was the war; the other was self-government. Since the proclamation which followed the Mutiny in 1858, the final aims of British policy in India had never been defined. The government of India for the good of Indians themselves was the principle which inspired that famous proclamation. Its terms left for future interpretation the question wherein the good of Indians consisted. But since 1858 no further proclamation had been made on the subject. Meanwhile the whole situation had been changed by the progress of education, and the British service found themselves faced by a situation in respect of which the supreme authority had left them without instructions. The British service were not to blame. It was the business of the British Parliament and electorate, and of no one else, to give them instructions, and none had been given.

§ 2. Nevertheless self-government was discussed, in official as well as in Indian society, as the one conceivable goal of British policy. Every one was talking of self-government last year; so I made it my business to discover what every one meant by it, and I found no less than four different meanings, none of which conformed to my own conception of what the term, carried to its practical conclusion, ought to imply.

§ 3. To begin with, there were British officials who talked of self-government. In answer to my questions I found that some of them meant no more than the emancipation of the Government of India from the control of Parliament and the Secretary of State, coupled with a devolution of specified powers and revenues to provincial governments. In the

CHAPTER 1

THE HISTORY OF THE UNITED STATES

The history of the United States is a complex and multifaceted story that spans centuries. It begins with the arrival of Native Americans on the continent, followed by the exploration and settlement by European powers. The United States was founded as a new nation, and its history is marked by significant events, including the American Revolution, the Civil War, and the rise of the United States as a global superpower. The country has experienced periods of growth, decline, and renewal, and its history continues to shape the present and future of the nation.

The early history of the United States is characterized by the presence of Native American tribes, who lived in the land for thousands of years before the arrival of European settlers. The first European explorers, such as Christopher Columbus and John Cabot, discovered the New World in the late 15th century. The subsequent centuries saw the establishment of colonies by various European powers, including Spain, France, and the Netherlands. The United States was founded as a new nation in 1776, and its history is marked by significant events, including the American Revolution, the Civil War, and the rise of the United States as a global superpower.

The American Revolution was a pivotal moment in the history of the United States, as it led to the country's independence from British rule. The revolution was fought between 1775 and 1783, and it resulted in the signing of the Declaration of Independence in 1776. The new nation was founded on the principles of liberty, democracy, and the rule of law, and it has since become a model for other nations around the world.

The Civil War was another major event in the history of the United States, as it led to the abolition of slavery and the preservation of the Union. The war was fought between 1861 and 1865, and it resulted in the signing of the Emancipation Proclamation in 1863. The war was a turning point in the history of the United States, as it established the country as a free nation, and it paved the way for the country's emergence as a global superpower.

The rise of the United States as a global superpower is a testament to the country's strength, resilience, and leadership. The United States has played a central role in the world's history, and it has been a leading force in the promotion of democracy, human rights, and global peace. The country's history is a story of triumph and adversity, and it is a testament to the power of the American dream.

LETTERS TO THE PEOPLE OF INDIA ON RESPONSIBLE GOVERNMENT (December 1917)

LETTER I

THE MEANING OF WORDS

§ 1. WHEN I first reached India in October 1916, there were two subjects of general discussion. One was the war; the other was self-government. Since the proclamation which followed the Mutiny in 1858, the final aims of British policy in India had never been defined. The government of India for the good of Indians themselves was the principle which inspired that famous proclamation. Its terms left for future interpretation the question wherein the good of Indians consisted. But since 1858 no further proclamation had been made on the subject. Meanwhile the whole situation had been changed by the progress of education, and the British service found themselves faced by a situation in respect of which the supreme authority had left them without instructions. The British service were not to blame. It was the business of the British Parliament and electorate, and of no one else, to give them instructions, and none had been given.

§ 2. Nevertheless self-government was discussed, in official as well as in Indian society, as the one conceivable goal of British policy. Every one was talking of self-government last year; so I made it my business to discover what every one meant by it, and I found no less than four different meanings, none of which conformed to my own conception of what the term, carried to its practical conclusion, ought to imply.

§ 3. To begin with, there were British officials who talked of self-government. In answer to my questions I found that some of them meant no more than the emancipation of the Government of India from the control of Parliament and the Secretary of State, coupled with a devolution of specified powers and revenues to provincial governments. In the

mouths of others it meant the re-partition of British India into Native States. By self-government some Indians, as well as officials, meant no more than a progressive substitution of Indian for British officials. Fourthly, there were those who thought that executives in India could be left responsible, as at present, to the Secretary of State, and yet be rendered dependent for the exercise of their powers on Indian electorates and elected legislatures. This last alternative was the logical outcome of the Minto-Morley reforms.

§ 4. The word self-government was used to include these four wholly distinct ideas, and the result, as it seemed to me, was that most people were talking at cross-purposes.

§ 5. Some months later I was obliged by circumstances over which I had no control to publish a letter dealing with the subject, and in speaking of self-government I felt bound to explain in unequivocal words the sense in which I used the term. With that object in view I recorded a conversation I had had with an able and responsible friend in one of the Native States. Let me quote the actual words which I wrote and published at that time.

§ 6. 'I suggested that a great deal of misunderstanding was due to the fact that the term *self-government* was used to include two ideas (I have since found two more) which were in fact totally separate. "In this State", I said, "you have government of Indians by Indians. It is true you have some European officials who tell me that your government is treating them well. But none the less the government of His Highness the Maharaja is the government of Indians by an Indian. It is what we might appropriately call *Home rule*, if that name had not been assumed by a particular movement. But to show you what I mean by self-government, let me ask you a question: Do you think that His Highness would be well advised to make the two following changes at once?—

' "(1) To make the whole legislative council elective.

' "(2) To undertake to appoint as diwan the leader who commanded a majority of votes in the council, and also to dismiss him the moment he ceased to command a majority."

§ 7. 'The most capable Indian administrators I have met are those who have gained their experience in the Native States, which proves the value of responsibility in training men. Some of them are men of the most liberal views, but I doubt whether any of them would think that so drastic a change can be made at one stroke. I think they

' "(1) To make the whole legislative council elective.

' "(2) To undertake to appoint as diwan the leader who commanded a majority of votes in the council, and also to dismiss him the moment he ceased to command a majority."

§ 7. 'The most capable Indian administrators I have met are those who have gained their experience in the Native States, which proves the value of responsibility in training men. Some of them are men of the most liberal views, but I doubt whether any of them would think that so drastic a change can be made at one stroke. I think they

would say that a Prince who made such a change too quickly would be likely to throw his State into confusion, and thereby delay its progress towards self-government. He would advise that several intermediate steps should be taken, and I think he would hesitate to name any exact time within which the final change could be brought about.

§ 8. 'Be that as it may, you will now see what I mean when I speak of self-government. To avoid the risk of this misunderstanding it will be better, I suggest, to drop this ambiguous term and to use the words *responsible government* instead.

§ 9. 'And now let me ask you to consider this system of responsible government as applied, not to a Native State, but to the vast and complicated structure of British India. Here you have two orders of government to deal with—the Government of India and also the various governments of the provinces into which India is divided. Personally I do not flinch from saying that I look forward to a time when in all these provinces, and also in the capital of India itself, elective legislatures will sit, with executives wholly consisting of the leaders who for the time being command a majority, and resign the moment they cease to command it. . . .

§ 10. 'This is the end to which I am looking, and which can, I believe, be attained, if the goal is first clearly conceived, if the steps towards it are carefully thought out, if sufficient time is taken in making such steps, and also if each step is taken in time. I should find it difficult to suggest whether India has more to fear from over-haste or procrastination, and this I say, knowing that so wise, experienced, and advanced a democrat as Lord Morley has spoken of that goal as one which may never be reached in India. With all due deference to an authority so weighty I believe that it can, must, and will be reached, and nothing which I have seen in India has shaken or is likely to shake that faith.'

LETTER II

THE PRONOUNCEMENT OF AUGUST 20

§ 1. In the last week of 1916 the Indian National Congress and the All-India Muslim League in their annual session at Lucknow resolved 'that the time has come when His Majesty the King-Emperor should be pleased to issue a proclamation announcing that it is the aim and intention of British Policy to confer self-government on India at an

the economy. The model is a dynamic system of four equations, which are solved simultaneously. The first equation is the production function, which relates output to capital and labour. The second equation is the capital accumulation equation, which relates the change in capital to investment and depreciation. The third equation is the labour force equation, which relates the change in labour to population growth and migration. The fourth equation is the government budget constraint, which relates government spending to taxes and borrowing. The model is solved by finding the steady state values of capital, labour, and government spending, and then simulating the dynamic system to see how the economy evolves over time.

§ 10. 'This is the end to which I am looking, and which can, I believe, be attained, if the goal is first clearly conceived, if the steps towards it are carefully thought out, if sufficient time is taken in making such steps, and also if each step is taken in time. I should find it difficult to suggest whether India has more to fear from over-haste or procrastination, and this I say, knowing that so wise, experienced, and advanced a democrat as Lord Morley has spoken of that goal as one which may never be reached in India. With all due deference to an authority so weighty I believe that it can, must, and will be reached, and nothing which I have seen in India has shaken or is likely to shake that faith.'

LETTER II

THE PRONOUNCEMENT OF AUGUST 20

§ 1. In the last week of 1916 the Indian National Congress and the All-India Muslim League in their annual session at Lucknow resolved 'that the time has come when His Majesty the King-Emperor should be pleased to issue a proclamation announcing that it is the aim and intention of British Policy to confer self-government on India at an

Abstract

1000

would say that a Prince who made such a change too quickly would be likely to throw his State into confusion, and thereby delay its progress towards self-government. He would advise that several intermediate steps should be taken, and I think he would hesitate to name any exact time within which the final change could be brought about.

§ 8. 'Be that as it may, you will now see what I mean when I speak of self-government. To avoid the risk of this misunderstanding it will be better, I suggest, to drop this ambiguous term and to use the words *responsible government* instead.

§ 9. 'And now let me ask you to consider this system of responsible government as applied, not to a Native State, but to the vast and complicated structure of British India. Here you have two orders of government to deal with—the Government of India and also the various governments of the provinces into which India is divided. Personally I do not flinch from saying that I look forward to a time when in all these provinces, and also in the capital of India itself, elective legislatures will sit, with executives wholly consisting of the leaders who for the time being command a majority, and resign the moment they cease to command it. . . .

§ 10. 'This is the end to which I am looking, and which can, I believe, be attained, if the goal is first clearly conceived, if the steps towards it are carefully thought out, if sufficient time is taken in making such steps, and also if each step is taken in time. I should find it difficult to suggest whether India has more to fear from over-haste or procrastination, and this I say, knowing that so wise, experienced, and advanced a democrat as Lord Morley has spoken of that goal as one which may never be reached in India. With all due deference to an authority so weighty I believe that it can, must, and will be reached, and nothing which I have seen in India has shaken or is likely to shake that faith.'

LETTER II

THE PRONOUNCEMENT OF AUGUST 20

§ 1. In the last week of 1916 the Indian National Congress and the All-India Muslim League in their annual session at Lucknow resolved 'that the time has come when His Majesty the King-Emperor should be pleased to issue a proclamation announcing that it is the aim and intention of British Policy to confer self-government on India at an

early date, . . . and that a definite step should be taken towards self-government by granting the reforms contained in the scheme'. This scheme the resolution then proceeded to give in detail. Some months later the Viceroy informed the Legislative Council that the Government of India had forwarded definite proposals for reform to the Secretary of State. Clearly some answer had to be given to the request tendered by the Congress and League before their next meeting. As a matter of mere courtesy they would have to be told whether their demand for a statement of policy was to be granted or not. Every one, therefore, who had followed the course of affairs, had reason to know that some statement of policy was being considered, and might be expected at any moment. It was open to any one to formulate and present their views as to what that statement should be.

§ 2. On August 20, 1917, the Congress and League received their answer. In form, as well as in substance, the answer differed from that suggested in their resolutions. They had asked for a proclamation of the King-Emperor, such as that which was issued when Indian policy had been last defined in 1858. The statement they got on August 20 was embodied in the form of an answer to a question in the House of Commons put to the Secretary of State for India. The pronouncement was in substance the most important ever made on the place of India in the British Commonwealth. We cannot at this distance know what considerations induced a cabinet, burdened with the exigencies of a terrible war, to make a pronouncement of such capital importance in a manner so unpretentious. Some allowance must be made for the difficulties which the Imperial Government has to face before we criticize the course they took. But to any one who knows anything of India, it must be a matter of regret that a pronouncement changing the whole direction of British Policy in India should have been made in a form so inadequate. Its significance must and will be determined by the gravity of the matter it contains. But that significance would have been far better understood by Europeans and Indians alike, had it been embodied in the form of a proclamation, and, still more, had it been followed by such explanations by the Imperial Government and by the Government of India as its terms require. These terms are singularly plain. Yet dealing as they do with constitutional conditions new to India, their full significance has not been appreciated.

early date, . . . and that a definite step should be taken towards self-government by granting the reforms contained in the scheme'. This scheme the resolution then proceeded to give in detail. Some months later the Viceroy informed the Legislative Council that the Government of India had forwarded definite proposals for reform to the Secretary of State. Clearly some answer had to be given to the request tendered by the Congress and League before their next meeting. As a matter of mere courtesy they would have to be told whether their demand for a statement of policy was to be granted or not. Every one, therefore, who had followed the course of affairs, had reason to know that some statement of policy was being considered, and might be expected at any moment. It was open to any one to formulate and present their views as to what that statement should be.

§ 2. On August 20, 1917, the Congress and League received their answer. In form, as well as in substance, the answer differed from that suggested in their resolutions. They had asked for a proclamation of the King-Emperor, such as that which was issued when Indian policy had been last defined in 1858. The statement they got on August 20 was embodied in the form of an answer to a question in the House of Commons put to the Secretary of State for India. The pronouncement was in substance the most important ever made on the place of India in the British Commonwealth. We cannot at this distance know what considerations induced a cabinet, burdened with the exigencies of a terrible war, to make a pronouncement of such capital importance in a manner so unpretentious. Some allowance must be made for the difficulties which the Imperial Government has to face before we criticize the course they took. But to any one who knows anything of India, it must be a matter of regret that a pronouncement changing the whole direction of British Policy in India should have been made in a form so inadequate. Its significance must and will be determined by the gravity of the matter it contains. But that significance would have been far better understood by Europeans and Indians alike, had it been embodied in the form of a proclamation, and, still more, had it been followed by such explanations by the Imperial Government and by the Government of India as its terms require. These terms are singularly plain. Yet dealing as they do with constitutional conditions new to India, their full significance has not been appreciated.

§ 3. The Pronouncement, of course, contains much that is not new. It reaffirms principles which have figured as commonplaces in the speeches of Secretaries of State and of Viceroy since the time of Lord Morley. Such, for instance, is the promise to increase the association of Indians in every branch of the administration, and of the gradual development of self-governing institutions. The really new and therefore important matter was that contained in the words defining the goal to be sought. The Congress and League had asked the Imperial Government to proclaim 'that it is the aim and intention of British Policy to confer *self-government* on India at an early date'. In the answer made to them on August 20 they got something else, and indeed more than they had asked for; and they got it in far more definite terms. The goal is stated as 'the progressive realization of RESPONSIBLE GOVERNMENT in India, as an integral part of the British Empire'. The words 'Responsible Government' here appear for the first time in any official pronouncement on Indian Policy. I have seen it suggested in the public press that they were substituted by the cabinet for the words 'self-government', used by the Congress and League, in a fit of absence of mind. As a glance at the first words of the pronouncement will show, its terms were discussed in correspondence between the Imperial Government and the Government of India. The delay which took place, after the dispatches of the Government of India were sent to London and before the pronouncement was made, is sufficient evidence that every word was discussed and weighed. A writer who objects to 'responsible government' as the goal of Indian Policy cannot get rid of it by imputing carelessness and levity to British statesmen. 'Responsible government' must have been used in the place of 'self-government' with a full knowledge of the meaning it conveyed. Our first business, therefore, is to see what was the meaning which the Imperial Government must have attached to it.

§ 4. All executives are, of course, responsible to some higher authority. The Governor-General in Council is responsible to Parliament in England. So were the executives of Ontario and Quebec in the time of Lord Durham, and those of the Transvaal and the Orange River Colony in the five years succeeding the war. They were so responsible because they could be dismissed and replaced by the Secretary of State acting as the agent of Parliament. The demand arose in these countries (and at one time or another in all the

§ 3. The Pronouncement, of course, contains much that is not new. It reaffirms principles which have figured as commonplaces in the speeches of Secretaries of State and of Viceroy since the time of Lord Morley. Such, for instance, is the promise to increase the association of Indians in every branch of the administration, and of the gradual development of self-governing institutions. The really new and therefore important matter was that contained in the words defining the goal to be sought. The Congress and League had asked the Imperial Government to proclaim 'that it is the aim and intention of British Policy to confer *self-government* on India at an early date'. In the answer made to them on August 20 they got something else, and indeed more than they had asked for; and they got it in far more definite terms. The goal is stated as 'the progressive realization of RESPONSIBLE GOVERNMENT in India, as an integral part of the British Empire'. The words 'Responsible Government' here appear for the first time in any official pronouncement on Indian Policy. I have seen it suggested in the public press that they were substituted by the cabinet for the words 'self-government', used by the Congress and League, in a fit of absence of mind. As a glance at the first words of the pronouncement will show, its terms were discussed in correspondence between the Imperial Government and the Government of India. The delay which took place, after the dispatches of the Government of India were sent to London and before the pronouncement was made, is sufficient evidence that every word was discussed and weighed. A writer who objects to 'responsible government' as the goal of Indian Policy cannot get rid of it by imputing carelessness and levity to British statesmen. 'Responsible government' must have been used in the place of 'self-government' with a full knowledge of the meaning it conveyed. Our first business, therefore, is to see what was the meaning which the Imperial Government must have attached to it.

§ 4. All executives are, of course, responsible to some higher authority. The Governor-General in Council is responsible to Parliament in England. So were the executives of Ontario and Quebec in the time of Lord Durham, and those of the Transvaal and the Orange River Colony in the five years succeeding the war. They were so responsible because they could be dismissed and replaced by the Secretary of State acting as the agent of Parliament. The demand arose in these countries (and at one time or another in all the

self-governing Dominions), that the power of dismissing and replacing their executives should be taken from the Secretary of State and vested in their own electorates and in the assemblies elected thereby. That demand has always been made in the name of responsible government. In the minds of men like Mr. Lloyd George and Lord Milner, in whose recollection the demands made and granted in South Africa are still fresh, the term cannot possibly have suggested anything else.

§ 5. But the matter admits of no kind of doubt. Within the last few weeks the Lieutenant-Governor of the United Provinces, addressing the Convocation of the Allahabad University, used the following words: 'The British Government has announced that the ideal for India is responsible government, which means the administration of the country by an executive authority responsible through an elected legislature to the people; and we now have to shape our course towards that goal.'

§ 6. An executive is only responsible to a higher authority when that authority can remove it and put another in its place. In this pronouncement the goal prescribed for India is identified with that already attained by the self-governing Dominions. It is to be reached as an integral part of the British Commonwealth. At present the Government of India and those of the provinces are answerable to, and removable by, the British electorate through Parliament and the Secretary of State. The Imperial Government now looks forward to a time when those executives will all be answerable to, and removable by, Indian electorates, through elected assemblies. It is added, however, that this goal can only be achieved 'by successive stages'. The British Government and the Government of India, in other words the Imperial Parliament and electorate, to which both these Governments are answerable, are to decide, from time to time, what those stages are to be and how fast they can be taken. But why are these stages needed? Why cannot the final power of removing and replacing these executives be transferred at one stroke from the Secretary of State to Indian electorates? The answer is contained in the words of the pronouncement: 'The British Government and the Government of India, on whom the responsibility lies for the welfare and advancement of the Indian peoples, must be judges of the time and measure of each advance, and they must be guided by the co-operation received from those upon whom new opportunities

self-governing Dominions), that the power of dismissing and replacing their executives should be taken from the Secretary of State and vested in their own electorates and in the assemblies elected thereby. That demand has always been made in the name of responsible government. In the minds of men like Mr. Lloyd George and Lord Milner, in whose recollection the demands made and granted in South Africa are still fresh, the term cannot possibly have suggested anything else.

§ 5. But the matter admits of no kind of doubt. § 6. An executive is only responsible to a higher authority when that authority can remove it and put another in its place. In this pronouncement the goal prescribed for India is identified with that already attained by the self-governing Dominions. It is to be reached as an integral part of the British Commonwealth. At present the Government of India and those of the provinces are answerable to, and removable by, the British electorate through Parliament and the Secretary of State. The Imperial Government now looks forward to a time when those executives will all be answerable to, and removable by, Indian electorates, through elected assemblies. It is added, however, that this goal can only be achieved 'by successive stages'. The British Government and the Government of India, in other words the Imperial Parliament and electorate, to which both these Governments are answerable, are to decide, from time to time, what those stages are to be and how fast they can be taken. But why are these stages needed? Why cannot the final power of removing and replacing these executives be transferred at one stroke from the Secretary of State to Indian electorates? The answer is contained in the words of the pronouncement: 'The British Government and the Government of India, on whom the responsibility lies for the welfare and advancement of the Indian peoples, must be judges of the time and measure of each advance, and they must be guided by the co-operation received from those upon whom new opportunities

of service will thus be conferred, and by the extent to which it is found that confidence can be reposed in their sense of responsibility.'

§ 7. In plain words, the British Government, at the moment of making the announcement, sees no electorates to whom it can transfer the responsibility which now rests on itself. The immediate task before it is to develop such electorates in India, and in such manner that it is possible to test the reality of the development. The question how this is to be done is the root of the whole problem set by the pronouncement of the Imperial Government.

§ 8. Short of a pronouncement involving the separation of India from England, no declaration of policy more definite and final could have been made. From public statements we know that its terms were under discussion between the Imperial Government and the Government of India since the earlier months of 1917. We know that Mr. Montagu engaged to take up matters where Mr. Chamberlain left them ; nor is it unlikely that, when the records are laid bare, the future historian may find the pronouncement, as issued on August 20, amongst the papers of Mr. Chamberlain. In any case it was accepted by a cabinet which includes not only a Liberal Prime Minister and a Labour member, but Lord Curzon, Lord Milner, and Sir Edward Carson. It was tacitly accepted by the House of Commons and by the House of Lords. Its announcement to Parliament without provoking a vote of censure is equivalent to its acceptance by the Imperial Parliament and electorate. It is now, despite the casual form in which it was announced, in every way a pronouncement of the Imperial Government, a British declaration of policy. It was made by the lawful and accredited government of a people now in arms to vindicate the word they plighted to the Belgian nation. If I know our people, they will not go back on their word. It reflects, moreover, their innermost mind. In the last few days I have listened to one, unconnected with party or press, who was recently sent to discuss public affairs with the men in the trenches on the Western front. To his questions about India he was met with the answer, 'Well, we know little about India. But we're fighting for the British Empire, which stands for self-government, and it's up to England to help India to self-government. That is the principle for which we are fighting.'

§ 9. In the last few weeks I have read and listened to suggestions that this declaration of policy was wrung from

the world's largest and most powerful nations. The United States, China, and the European Union are the three largest economies in the world, and together they account for more than 60 percent of the world's total economic output.

The United States is the largest economy in the world, with a GDP of over \$14 trillion in 2007. China is the second largest, with a GDP of over \$3 trillion. The European Union is the third largest, with a GDP of over \$12 trillion. These three economies are responsible for a significant portion of the world's economic growth and development. They are also the three largest emitters of greenhouse gases, which is a major concern for the world's climate.

The United States, China, and the European Union are also the three largest consumers of natural resources. The United States consumes more than 25 percent of the world's oil, and China consumes more than 10 percent. The European Union consumes more than 15 percent of the world's natural gas. These three nations are also the three largest producers of greenhouse gases, which is a major concern for the world's climate.

The United States, China, and the European Union are also the three largest contributors to global development. The United States has provided more than \$500 billion in aid to developing countries since 1945. China has provided more than \$100 billion in aid to developing countries since 1978. The European Union has provided more than \$200 billion in aid to developing countries since 1975.

The United States, China, and the European Union are also the three largest investors in global infrastructure. The United States has invested more than \$100 billion in global infrastructure since 1945. China has invested more than \$100 billion in global infrastructure since 1978. The European Union has invested more than \$100 billion in global infrastructure since 1975.

The United States, China, and the European Union are also the three largest contributors to global research and development. The United States has contributed more than \$100 billion to global research and development since 1945. China has contributed more than \$100 billion to global research and development since 1978. The European Union has contributed more than \$100 billion to global research and development since 1975.

The United States, China, and the European Union are also the three largest contributors to global education. The United States has contributed more than \$100 billion to global education since 1945. China has contributed more than \$100 billion to global education since 1978. The European Union has contributed more than \$100 billion to global education since 1975.

The United States, China, and the European Union are also the three largest contributors to global health. The United States has contributed more than \$100 billion to global health since 1945. China has contributed more than \$100 billion to global health since 1978. The European Union has contributed more than \$100 billion to global health since 1975.

of service will thus be conferred, and by the extent to which it is found that confidence can be reposed in their sense of responsibility.'

§ 7. In plain words, the British Government, at the moment of making the announcement, sees no electorates to whom it can transfer the responsibility which now rests on itself. The immediate task before it is to develop such electorates in India, and in such manner that it is possible to test the reality of the development. The question how this is to be done is the root of the whole problem set by the pronouncement of the Imperial Government.

§ 8. Short of a pronouncement involving the separation of India from England, no declaration of policy more definite and final could have been made. From public statements we know that its terms were under discussion between the Imperial Government and the Government of India since the earlier months of 1917. It was made by the lawful and accredited government of a people now in arms to vindicate the word they plighted to the Belgian nation. If I know our people, they will not go back on their word. It reflects, moreover, their innermost mind. In the last few days I have listened to one, unconnected with party or press, who was recently sent to discuss public affairs with the men in the trenches on the Western front. To his questions about India he was met with the answer, 'Well, we know little about India. But we're fighting for the British Empire, which stands for self-government, and it's up to England to help India to self-government. That is the principle for which we are fighting.'

§ 9. In the last few weeks I have read and listened to suggestions that this declaration of policy was wrung from

England by fear. Would Indians, who have said such things in Calcutta, repeat them within the sound of the guns, to those who stand in the presence of death, to whom the word 'fear' cannot be named? By such words they dishonour not England, but themselves. Not once nor twice in this country have I felt how little they know of India, who only India know. Englishmen must learn to know India better, but some Indians have need to know what England is, and that knowledge must be sought in the shambles of Flanders and France.

§ 10. For the moment, however, I am speaking to my own countrymen in India. Whether it will ever be possible to transfer the control of all Indian affairs to Indian electorates, and to place India on the same footing as the self-governing Dominions, is a point upon which some of us may differ. But on one point we shall all agree, that unless or until that goal can be reached, the final decision of British policy in India must rest with the Imperial Government, Parliament, and electorate, which for the present is the British Government, Parliament, and electorate. Such decisions cannot rest either with Indians, nor yet with the British community in India. But what both communities can do is to give public opinion in England the information it sadly needs, and give it in time. So far the information available there has been drawn from two sources, and two only: from Nationalist quarters and from British officials. From missionary circles little has been heard, and from business circles in India, till the last few months, nothing at all. I am not questioning the truth of what Nationalists say, or what the officials say. But I do say that the picture placed before the people of England is utterly incomplete, unless it includes information other than that derived from Nationalist and official quarters.

§ 11. It is for this reason, I believe, that every one in England will welcome the sudden awakening of their unofficial countrymen here to an interest in public affairs. For the moment the trouble is that the awakening has come too late. A new declaration of policy had been long pending and promised; but the views of the European community were not expressed until it had been made in terms which are now impossible to alter.

§ 12. In future the people of England will, one hopes and believes, receive the advice of their countrymen here. The effect of that advice will surely depend on its quality and motive. If it is solely concerned with the interests and

England by fear. Would Indians, who have said such things in Calcutta, repeat them within the sound of the guns, to those who stand in the presence of death, to whom the word 'fear' cannot be named? By such words they dishonour not England, but themselves. Not once nor twice in this country have I felt how little they know of India, who only India know. So far the information available there has been drawn from two sources, and two only: from Nationalist quarters and from British officials. From missionary circles little has been heard, and from business circles in India, till the last few months, nothing at all. I am not questioning the truth of what Nationalists say, or what the officials say. But I do say that the picture placed before the people of England is utterly incomplete, unless it includes information other than that derived from Nationalist and official quarters.

§ 11. It is for this reason, I believe, that every one in England will welcome the sudden awakening of their unofficial countrymen here to an interest in public affairs. For the moment the trouble is that the awakening has come too late. A new declaration of policy had been long pending and promised; but the views of the European community were not expressed until it had been made in terms which are now impossible to alter.

§ 12. In future the people of England will, one hopes and believes, receive the advice of their countrymen here. The effect of that advice will surely depend on its quality and motive. If it is solely concerned with the interests and

privileges of Englishmen in India it will, I predict, weigh but lightly. If on the other hand it comes from men who are keeping in view the interests of India and of the whole British Commonwealth, and who speak with knowledge, not only of their own business concerns, but also of the public trust which England is seeking to discharge in this country, such advice will, I believe, weigh with preponderant force. The time has come when your countrymen at home are entitled to have your opinions on subjects like communal representation, and the separation of executive and judicial functions. India is not Morocco, nor the Argentine, nor Korea, but an integral part of the British Commonwealth, and the time is past when Englishmen here could confine themselves to business, as though public questions in India could be settled on none but official advice. And therefore the time is past when the European Association could stand only for securing the privilege of Europeans in India.

§ 13. With all this I know you will agree. But there is another and even graver point. From time to time England must make decisions, and give pledges with regard to her policy in India—such pledges as were given in 1858, and once again on August 20 last. You at least know the value of British prestige, which rests simply on India's faith in the two Saxon words 'Yea' and 'Nay'. In the end England will be judged in India by what England herself does, or leaves undone. But at any given moment the people of England largely stand to be judged by their fellow-countrymen who are face to face with Indians themselves. The men who return from the trenches will, I believe, see that this promise is kept. Let their countrymen here think twice before assuming positions which must lead Indians to think that Englishmen at home may be made to play fast and loose with their pledges. Those pledges are given to you no less than to Indians, and they also will be making a vast mistake, if they dream that after the war England can be brought to change or go back on one phrase or word of this solemn pronouncement.

§ 14. That is the main point. But now there is a kindred point, which I commend to the notice of Indians as well as to my own countrymen at this juncture. The pronouncement is binding on the Secretary of State *in all its terms*. Under them he was sent here by the Imperial Cabinet, and, as I read them, it is not permissible for him to discuss whether such a declaration should have been made, whether responsible government is a feasible project in India, or whether,

privileges of Englishmen in India it will, I predict, weigh but lightly. The organization's strategic planning process is a process that involves the organization's mission and vision statements. It is a process that involves the organization's management team and other key stakeholders. It is a process that involves the organization's resources and capabilities.

let me add, it can be granted outright, or otherwise than by a succession of steps. His inquiry is limited to the four corners of that pronouncement. The advice he must seek is simply how effect may best be given to it. If this interpretation is right, it follows that every one who feels he has views to offer at this juncture, should consider whether the pronouncement is one which he can accept, and whether the views he has to offer are within its terms. It is perfectly open to any one, British or Indian, to say he does not accept its terms: such views can be addressed to the Imperial Government, to Parliament and the public in England with whom the ultimate decision lies. But the pronouncement shows that the Secretary of State has not been empowered to discuss such views. Surely he is limited by its terms to proposals which can be brought within the lines laid down for him by the Imperial Government before he left England. And the limitation is two-edged. Advice to do nothing, and proposals to grant responsible government outright, are in fact demands that the pronouncement should be changed, and that new instructions should be issued to the Secretary of State. I venture to predict that it will not be changed, and that these instructions will bind not Mr. Montagu only, but all Secretaries of State in time to come until, by successive stages, responsible government has been realized in India.

LETTER III

ELECTORAL SYSTEMS FALSE AND TRUE

§ 1. THE steps by which the goal is to be reached, and especially the first of those steps to be taken, which must of necessity determine the character of all those which are to follow, are left for subsequent inquiry. The question before us is simply that of discovering the path whereby that goal can be reached most quickly. But in order to do that we must begin by glancing at the point from which we are to start. Except in the district and municipal boards there are no executives removable at the will of electorates. So far as the Indian and provincial governments are concerned, responsible government has no place in the existing constitution. In the last few years an Indian member has been appointed to each of the executive councils, but his responsibility to the Secretary of State differs in no respect

LETTER III

ELECTORAL SYSTEMS FALSE AND TRUE

§ 1. THE steps by which the goal is to be reached, and especially the first of those steps to be taken, which must of necessity determine the character of all those which are to follow, are left for subsequent inquiry. The question before us is simply that of discovering the path whereby that goal can be reached most quickly. But in order to do that we must begin by glancing at the point from which we are to start. Except in the district and municipal boards there are no executives removable at the will of electorates. So far as the Indian and provincial governments are concerned, responsible government has no place in the existing constitution. In the last few years an Indian member has been appointed to each of the executive councils, but his responsibility to the Secretary of State differs in no respect

from that shared by his European colleagues. Like them he is called to office, and can be dismissed, by the Secretary of State.

§ 2. The legislatures consist partly of officials, who in the Governor-General's Council only are in the majority, partly of non-officials, mostly Indians, appointed by government, and partly of members, almost entirely Indian, who do not hold their seats by government appointment. From the latest returns it appears that the Imperial Council consists of 68 members, 27 of whom are elected. Of these 18 are elected to speak for sectional interests, either land-holders, Mohammedans, merchants, or manufacturers. The remaining 9, indirectly elected by non-official members of the nine provincial councils, are presumably intended to voice the views of the people at large.

§ 3. To illustrate the method of election, let us take the case of the member representing the United Provinces. His constituency consists of the 29 non-official members of the legislative council of that Province. Of these 29 members, 21 are elected. Of the 21 elected members, 8 represent sectional interests, and 13 the District and Municipal Boards. Of the 13, only 4 are directly elected by the Boards. The remaining 9 are returned by electoral colleges composed of delegates elected by district and municipal boards in each of nine divisions. The boards are directly elected; so at last we come to the bed-rock of primary voters. The voters to the District Board are simply nominated by the Collector. But he may not nominate more than 100 for any one tahsil, which means in practice not more than one in every 2,000 inhabitants. Educated Indians are accused of seeking an oligarchy under the guise of self-government. Here, in a law made by ourselves, the image of oligarchy was stamped on the system. This iron limitation is enough to show how little the fundamental problem of developing electorates figured in the minds of those who elaborated this travesty of an electoral system.

§ 4. We are now in a position to trace the electoral chain by which a member of the Imperial Council is supposed to represent a voter in one of these divisions.

1. The primary voter returns a member to the district or municipal board.
2. The Board returns members to an electoral college.
3. The college returns a member to the provincial council.
4. The non-official members, including sectional members

from that shared by his European colleagues. Like them he is called to office, and can be dismissed, by the Secretary of State.

§ 2. The legislatures consist partly of officials, who in the Governor-General's Council only are in the majority, partly of non-officials, mostly Indians, appointed by government, and partly of members, almost entirely Indian, who do not hold their seats by government appointment. From the latest returns it appears that the Imperial Council consists of 68 members, 27 of whom are elected. Of these 18 are elected to speak for sectional interests, either land-holders, Mohammedans, merchants, or manufacturers. The remaining 9, indirectly elected by non-official members of the nine provincial councils, are presumably intended to voice the views of the people at large.

§ 3. To illustrate the method of election, let us take the case of the member representing the United Provinces. His constituency consists of the 29 non-official members of the legislative council of that Province. Of these 29 members, 21 are elected. Of the 21 elected members, 8 represent sectional interests, and 13 the District and Municipal Boards. Of the 13, only 4 are directly elected by the Boards. The remaining 9 are returned by electoral colleges composed of delegates elected by district and municipal boards in each of nine divisions. The boards are directly elected; so at last we come to the bed-rock of primary voters. The voters to the District Board are simply nominated by the Collector. But he may not nominate more than 100 for any one tahsil, which means in practice not more than one in every 2,000 inhabitants. Educated Indians are accused of seeking an oligarchy under the guise of self-government. Here, in a law made by ourselves, the image of oligarchy was stamped on the system. This iron limitation is enough to show how little the fundamental problem of developing electorates figured in the minds of those who elaborated this travesty of an electoral system.

§ 4. We are now in a position to trace the electoral chain by which a member of the Imperial Council is supposed to represent a voter in one of these divisions.

1. The primary voter returns a member to the district or municipal board.
2. The Board returns members to an electoral college.
3. The college returns a member to the provincial council.
4. The non-official members, including sectional members

and those appointed by government, return a member to the Imperial Legislative Council.

§ 5. The system is one which destroys any real connexion between the primary voter and the member who sits on the legislative councils. Repeatedly have I asked those in a position to know, whether a primary voter casts his vote with any reference to the effect it will have in determining the composition of the legislative councils. The answer was always in the negative. For all practical purposes, the non-official members of the provincial councils are primary electors, so far as their representatives in the Imperial Council are concerned. They hold no mandate from those who elect them. Their position as elected members is purely and simply a voter's qualification, which takes the place of age, property, education, or any of the ordinary qualifications of voters. One member in the Imperial Council sits by virtue of a majority of 9 votes. The total number of votes, by which all the elected members of this Council are returned, can scarcely exceed 4,000. That gives less than an average of 150 for each member. Similarly, members of the legislative council of the United Provinces are elected by about 3,000 votes, or an average of about 143 for each elected member.

§ 6. From this analysis, it is plain that, so far as the legislative councils are concerned, the so-called representative system is a sham. The experience it provides can do little or nothing towards developing electorates, for the reason that the primary voter for the district and municipal boards cannot possibly trace the effect of his vote on the legislative councils. Lord Morley failed to see that this was the crux of the problem, because he would never face in his own mind the prospect of devolving responsibility on Indian electorates, as the Imperial Government has now faced it. Hence the practical importance of the recent pronouncement.

§ 7. Let us now turn to this essential question, the development of electorates, and see what answers have been given to it. One answer commonly given is that no political responsibility can be given to electorates until education is far more advanced and more widely spread than it now is. Implicit in this answer is the presumption that the future electors can be educated to a sense of political responsibility in schools and colleges. My answer is that if you were to cover India with schools and colleges until you had multiplied the educated classes tenfold, without at the same time

and those appointed by government, return a member to the Imperial Legislative Council.

§ 5. The system is one which destroys any real connexion between the primary voter and the member who sits on the legislative councils. Repeatedly have I asked those in a position to know, whether a primary voter casts his vote with any reference to the effect it will have in determining the composition of the legislative councils. The answer was always in the negative. For all practical purposes, the non-official members of the provincial councils are primary electors, so far as their representatives in the Imperial Council are concerned. They hold no mandate from those who elect them. Their position as elected members is purely and simply a voter's qualification, which takes the place of age, property, education, or any of the ordinary qualifications of voters. One member in the Imperial Council sits by virtue of a majority of 9 votes. The total number of votes, by which all the elected members of this Council are returned, can scarcely exceed 4,000. That gives less than an average of 150 for each member. Similarly, members of the legislative council of the United Provinces are elected by about 3,000 votes, or an average of about 143 for each elected member.

§ 6. From this analysis, it is plain that, so far as the legislative councils are concerned, the so-called representative system is a sham. The experience it provides can do little or nothing towards developing electorates, for the reason that the primary voter for the district and municipal boards cannot possibly trace the effect of his vote on the legislative councils. Lord Morley failed to see that this was the crux of the problem, because he would never face in his own mind the prospect of devolving responsibility on Indian electorates, as the Imperial Government has now faced it. Hence the practical importance of the recent pronouncement.

§ 7. Let us now turn to this essential question, the development of electorates, and see what answers have been given to it. One answer commonly given is that no political responsibility can be given to electorates until education is far more advanced and more widely spread than it now is. Implicit in this answer is the presumption that the future electors can be educated to a sense of political responsibility in schools and colleges. My answer is that if you were to cover India with schools and colleges until you had multiplied the educated classes tenfold, without at the same time

giving them any instalment of genuine political responsibility, you would have rendered India ungovernable under any system. This I believe is exactly what has happened in Russia. There, public responsibility was limited to municipal and district bodies. In the Imperial and provincial Governments, the educated classes were confined to criticizing the executives, over whom they had no control. In the political sphere they were left without responsibility for seeing that the government was carried on. The natural result is that they have been able to destroy government, but have proved utterly incapable of evolving any government of their own, which they could bring themselves, let alone the illiterate majority, to obey. The results are before us, if only in the awful silence which envelops Russia, and recalls those hours in the Black Hole of Calcutta. So deadly and so general is the struggle of each for himself, that no one is able to tell those without of the tragedy in progress within. May the wisdom of her rulers deliver India from a like fate! But that cannot be done by denying education to her people. They must have education, and more and more of it; but the result will be the same as in Russia, unless side by side with increasing education is given a steady and progressive increase in political responsibility.

§ 8. The truth is that schools and colleges can do no more than teach people how to learn. They can impart knowledge, but wisdom can only be learned in the school of responsibility. It can only be taught by leaving men to suffer by the results of the things which they themselves do; still more, by the results of the things which they leave undone.

§ 9. Last year I visited a village in Central India where some people had died of cholera. The villagers had promptly gone to the police station, obtained permanganate of potash, put it in the wells, and stopped the cholera. The commissioner, with whom I was camping, told me that only a few years before the police had been mobbed for attempting to disinfect the wells. The change had come about, because, in their own experience, they had seen that permanganate in the wells will stop cholera. Now let any one consider whether this practical truth would have come home to them, if it had only been taught them in text-books. School teaching will help to disintegrate the deadening effect of custom, to open the eyes of the mind to new ideas, and enable a community to read the lessons of experience

giving them any instalment of genuine political responsibility, you would have rendered India ungovernable under any system. This I believe is exactly what has happened in Russia. There, public responsibility was limited to municipal and district bodies. In the Imperial and provincial Governments, the educated classes were confined to criticizing the executives, over whom they had no control. In the political sphere they were left without responsibility for seeing that the government was carried on. The natural result is that they have been able to destroy government, but have proved utterly incapable of evolving any government of their own, which they could bring themselves, let alone the illiterate majority, to obey. The results are before us, if only in the awful silence which envelops Russia, and recalls those hours in the Black Hole of Calcutta. So deadly and so general is the struggle of each for himself, that no one is able to tell those without of the tragedy in progress within. May the wisdom of her rulers deliver India from a like fate ! But that cannot be done by denying education to her people. They must have education, and more and more of it ; but the result will be the same as in Russia, unless side by side with increasing education is given a steady and progressive increase in political responsibility.

§ 8. The truth is that schools and colleges can do no more than teach people how to learn. They can impart knowledge, but wisdom can only be learned in the school of responsibility. It can only be taught by leaving men to suffer by the results of the things which they themselves do ; still more, by the results of the things which they leave undone.

§ 9. Last year I visited a village in Central India where some people had died of cholera. The villagers had promptly gone to the police station, obtained permanganate of potash, put it in the wells, and stopped the cholera. The commissioner, with whom I was camping, told me that only a few years before the police had been mobbed for attempting to disinfect the wells. The change had come about, because, in their own experience, they had seen that permanganate in the wells will stop cholera. Now let any one consider whether this practical truth would have come home to them, if it had only been taught them in text-books. School teaching will help to disintegrate the deadening effect of custom, to open the eyes of the mind to new ideas, and enable a community to read the lessons of experience

more quickly. But the practical lessons of life must come from experience itself. Without experiencing the results that follow the giving of votes, under a system so simple as to make that experience easy to read, education will operate to unfit a people for responsibility in public affairs. The two things must go side by side. The educational value of the present electoral system is destroyed by its complication, and also by the fact that members have no function but criticism, and no responsibility laid upon them. And hence there is none laid upon the voters. But their judgement cannot be developed except by a system which enables them to trace the results of their votes on their own lives; in plain words, by some responsibility.

§ 10. In the making of electorates a quality more difficult to develop, even than judgement, is discipline. The hardest lesson a raw electorate has to learn is that of giving the rulers they elect power to rule. The obedience upon which government is founded, even in autocracies, is at root moral. Despotism rests on a basis of theocracy, on the idea of a law delivered on Horeb. The obedience rendered by his subjects to an Indian prince is inspired by the belief in his divine title to rule. It is not force which makes the Indian peasant so docile to British rule, so much as an ingrained conviction that power to rule is of itself an evidence of divine authority. To this title the Kaiser is constantly appealing. It has enabled the Czars to rule Russia for centuries. But the idea is one which will not stand the disintegrating force of education. If relied upon too long, it suddenly collapses, as in Russia. And then a people undisciplined by any sense of responsibility outside the sphere of district, village, or town life, are called upon to obey men elected to rule the province and the nation. The old principle of obedience is suddenly shattered, before they have had time to acquire the only alternative principle, which is the habit of obeying rulers in the general interest and because they represent the general authority. Self-government rests on a sufficient capacity in enough individuals to put the interests of others before their own. It is the Sermon on the Mount reduced to practice in the field of politics. This habit can, I firmly believe, be produced in any people by constant and increasing exercise. But it is contrary to all reason and all experience of human nature to suppose that it can be produced without the exercise of responsibility, steadily increased as the habit becomes more fully acquired and more widely spread. Mr. Montagu's

more quickly. But the practical lessons of life must come from experience itself. Without experiencing the results that follow the giving of votes, under a system so simple as to make that experience easy to read, education will operate to unfit a people for responsibility in public affairs. The two things must go side by side. The educational value of the present electoral system is destroyed by its complication, and also by the fact that members have no function but criticism, and no responsibility laid upon them. And hence there is none laid upon the voters. But their judgement cannot be developed except by a system which enables them to trace the results of their votes on their own lives: in plain words, by some responsibility.

§ 10. In the making of electorates a quality more difficult to develop, even than judgement, is discipline. The hardest lesson a raw electorate has to learn is that of giving the rulers they elect power to rule. The obedience upon which government is founded, even in autocracies, is at root moral. Despotism rests on a basis of theocracy, on the idea of a law delivered on Horeb. The obedience rendered by his subjects to an Indian prince is inspired by the belief in his divine title to rule. It is not force which makes the Indian peasant so docile to British rule, so much as an ingrained conviction that power to rule is of itself an evidence of divine authority. To this title the Kaiser is constantly appealing. It has enabled the Czars to rule Russia for centuries. But the idea is one which will not stand the disintegrating force of education. If relied upon too long, it suddenly collapses, as in Russia. And then a people undisciplined by any sense of responsibility outside the sphere of district, village, or town life, are called upon to obey men elected to rule the province and the nation. The old principle of obedience is suddenly shattered, before they have had time to acquire the only alternative principle, which is the habit of obeying rulers in the general interest and because they represent the general authority. Self-government rests on a sufficient capacity in enough individuals to put the interests of others before their own. It is the Sermon on the Mount reduced to practice in the field of politics. This habit can, I firmly believe, be produced in any people by constant and increasing exercise. But it is contrary to all reason and all experience of human nature to suppose that it can be produced without the exercise of responsibility, steadily increased as the habit becomes more fully acquired and more widely spread. Abstract

1. The first step is to identify the problem or question that needs to be addressed. This involves understanding the context and the specific requirements of the task.

Abstract

mission is the necessary corollary of that undertaken by Dr. Sadler and his colleagues.¹

§ 11. To put the matter in a nutshell, the view—long current—that an improvement and extension of education is the key to the political problems of India, is a dangerous half-truth. It is but a fragment of the true key, and if tried alone, will break, with the results inevitable when a lock is jammed by a broken key.

LETTER IV

THE EXISTING SYSTEM AND ITS LOGICAL OUTCOME

§ 1. THE best that can be said of the existing system is that it has introduced to the legislatures an element whose point of view is other than that formed in official experience. I believe that legislation and public policy have benefited by the public criticism of laymen. But it trains those laymen merely as critics. It provides no training in, and no test of, administrative capacity or statesmanship. The leaders who emerge and figure in the public eye are necessarily those who can criticize most effectively in the English tongue. They are never put to the test, nor trained by the necessity of having to do anything themselves.

§ 2. In all provincial councils non-officials are in the majority. In Bengal the elected members alone are in the majority. To these majorities are opposed a minority of British officials bound by the express orders of the Government of India to vote, in every division, in accordance with orders issued by government. I do not know the reason for these orders. In the Transvaal and Orange River Colonies, where I watched the same system under Crown Colony government, officials were left free to vote according to their own judgement on all but questions of primary importance, those, generally speaking, which, under responsible government, might involve a change of the ministry. I do not think the government whip was issued on half a dozen divisions in the session. Official members were free to speak, and in doing so often influenced the government in the direction desired by the non-official members. In the Indian councils no official may speak, except at the instance of the executive. In the Transvaal there was no

Abstract

1. **Identify the main components of the system.**
 2. **Define the objectives and scope of the study.**
 3. **Formulate hypotheses or research questions.**
 4. **Design the methodology and data collection process.**
 5. **Analyze the data and draw conclusions.**
 6. **Present the findings and discuss their implications.**
 7. **Conclude the study and provide recommendations.**

[illegible]

such cleavage as exists in India between official and non-official members.

§ 3. The whole effect of this system strikes one as singularly calculated to produce a cleavage on racial lines, and to exasperate racial feeling. Inevitably it operates to produce a solidarity of Indian members, on purely racial lines, in opposition to an alien government, and the cases in which governments are defeated are steadily increasing. In plain words, moderates are forced into the camp of extremists.

§ 4. If government proposes unpopular measures, or resists popular resolutions and amendments, it is not because it likes doing unpopular things. Unrepresentative governments are far more nervous of opposition than those which rest on an ascertained majority of voters. Government only resists the elected members where it is honestly convinced that it cannot otherwise discharge the trust laid on it, and in the last instance because it cannot otherwise maintain order. Already provincial governments are directly dependent on non-official votes for the concurrence of the legislature, without which they cannot discharge the duties laid on them. Is it humanly possible, if this system be long continued, that the executives will resist the temptation to influence non-official members by means other than pure argument in open debate? Wherever this system has been long continued, government by 'influence' has set in, degenerating into government by intrigue, and ending in government by corruption.

§ 5. How far Executives are still able to maintain a working majority it is difficult to say, because they shrink from proposing necessary measures which mean public defeat. But where they do succeed in voting down the elected members, the spectacle of the British phalanx casting a solid vote against them by order is irritating in the extreme. Inevitably it begets a demand for a clear and overwhelming majority as the natural means of relief from the exasperation felt on being voted down by British officials. The present system suggests to Nationalists a line of advance which will enable them to tie the hands of the Executive without assuming any responsibility for the results of inaction.

§ 6. The schemes suggested by Mr. Gokhale, the nineteen members, and by the Congress and League, are the logical result of this situation. With one exception, to which I propose to refer later on, all the schemes for development on the lines initiated in the Morley-Minto reform proceed on this principle of strangling the responsible executive

1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 26

such cleavage as exists in India between official and non-official members.

§ 3. The whole effect of this system strikes one as singularly calculated to produce a cleavage on racial lines, and to exasperate racial feeling. Inevitably it operates to produce a solidarity of Indian members, on purely racial lines, in opposition to an alien government, and the cases in which governments are defeated are steadily increasing. In plain words, moderates are forced into the camp of extremists.

§ 4. If government proposes unpopular measures, or resists popular resolutions and amendments, it is not because it likes doing unpopular things. Unrepresentative governments are far more nervous of opposition than those which rest on an ascertained majority of voters. Government only resists the elected members where it is honestly convinced that it cannot otherwise discharge the trust laid on it, and in the last instance because it cannot otherwise maintain order. Already provincial governments are directly dependent on non-official votes for the concurrence of the legislature, without which they cannot discharge the duties laid on them. Is it humanly possible, if this system be long continued, that the executives will resist the temptation to influence non-official members by means other than pure argument in open debate? Wherever this system has been long continued, government by 'influence' has set in, degenerating into government by intrigue, and ending in government by corruption.

§ 5. How far Executives are still able to maintain a working majority it is difficult to say, because they shrink from proposing necessary measures which mean public defeat. But where they do succeed in voting down the elected members, the spectacle of the British phalanx casting a solid vote against them by order is irritating in the extreme. Inevitably it begets a demand for a clear and overwhelming majority as the natural means of relief from the exasperation felt on being voted down by British officials. The present system suggests to Nationalists a line of advance which will enable them to tie the hands of the Executive without assuming any responsibility for the results of inaction.

§ 6. The schemes suggested by Mr. Gokhale, the nineteen members, and by the Congress and League, are the logical result of this situation. With one exception, to which I propose to refer later on, all the schemes for development on the lines initiated in the Morley-Minto reform proceed on this principle of strangling the responsible executive

by successive twists of the noose placed in the hands of irresponsible electorates. I have before me a letter from one of the ablest administrators in this country in which he rejects any scheme for the gradual delegation of specified functions on provincial authorities responsible to electorates. He goes on to say : ' I feel that it should not be beyond the wit of constitutional experts to frame a scheme of advance along the road of horizontal lines of increasing popular control over all the functions of government instead of vertical lines separating particular functions and without reaching a chasm that must be crossed at one bound.'

§ 7. I propose, therefore, to examine this idea of increasing popular control on horizontal lines in the case of the existing executives and legislatures. Let us take the executive first. The vital question, I submit, by which any scheme of government should be tested is this—to *whom is the executive under that scheme to be made responsible for their final decisions?* There are two alternatives and two only : Executives may remain responsible to the Secretary of State, which means to the Imperial Parliament, or else they may be made responsible to an electorate in India. There must and should be divisions in electorates and legislatures. In executives there can be none, so far as the public is concerned. All experience demonstrates that, unless government is to come to a standstill, the members of executives must thrash out their differences within closed doors. When a member of an executive council is voted down, he has but two courses before him : to resign, or else to support the decision of his colleagues, if only by his silence loyally observed in private as well as in public. Mr. Balfour once declared that he had often supported in public debate proposals which he had opposed in the privacy of the cabinet. Every man with experience of public affairs knows that this is an essential condition of executive action. Before a member of an executive is at liberty to explain his differences with his colleagues he must quit it. They must cease to be colleagues. In executives there must be unity, and it is for that reason that the selection of his colleagues is usually left to the head of the government. The principle of electing the cabinet by the caucus of the party in power, introduced in Australia, has now, I believe, been discarded as incompatible with the unity of the cabinet.

§ 8. Proposals are on foot to introducé two Indian members into the executives here, and I very much hope they will

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.05	0.02	2.50	0.01
Gender of the head of household (Male = 1, Female = 0)	-0.10	0.03	-3.33	0.00
Constant	1.50	0.10	15.00	0.00

The regression results indicate that the number of children in the household is positively related to the age of the head of household and negatively related to the gender of the head of household. Specifically, for every one-year increase in the age of the head of household, the number of children in the household increases by 0.05, holding all other variables constant. Conversely, for every one-unit increase in the gender variable (from female to male), the number of children in the household decreases by 0.10, holding all other variables constant.

by successive twists of the noose placed in the hands of irresponsible electorates. I have before me a letter from one of the ablest administrators in this country in which he rejects any scheme for the gradual delegation of specified functions on provincial authorities responsible to electorates. He goes on to say : ' I feel that it should not be beyond the wit of constitutional experts to frame a scheme of advance along the road of horizontal lines of increasing popular control over all the functions of government instead of vertical lines separating particular functions and without reaching a chasm that must be crossed at one bound.'

§ 7. I propose, therefore, to examine this idea of increasing popular control on horizontal lines in the case of the existing executives and legislatures. Let us take the executive first. The vital question, I submit, by which any scheme of government should be tested is this—to *whom is the executive under that scheme to be made responsible for their final decisions?* There are two alternatives and two only : Executives may remain responsible to the Secretary of State, which means to the Imperial Parliament, or else they may be made responsible to an electorate in India. There must and should be divisions in electorates and legislatures. In executives there can be none, so far as the public is concerned. All experience demonstrates that, unless government is to come to a standstill, the members of executives must thrash out their differences within closed doors. When a member of an executive council is voted down, he has but two courses before him : to resign, or else to support the decision of his colleagues, if only by his silence loyally observed in private as well as in public. Mr. Balfour once declared that he had often supported in public debate proposals which he had opposed in the privacy of the cabinet. Every man with experience of public affairs knows that this is an essential condition of executive action. Before a member of an executive is at liberty to explain his differences with his colleagues he must quit it. They must cease to be colleagues. In executives there must be unity, and it is for that reason that the selection of his colleagues is usually left to the head of the government. The principle of electing the cabinet by the caucus of the party in power, introduced in Australia, has now, I believe, been discarded as incompatible with the unity of the cabinet.

§ 8. Proposals are on foot to introducé two Indian members into the executives here, and I very much hope they will

be adopted. But the suggestion that these two members should be elected by the non-official members strikes at the root of the first principle of executive government. Responsibility of an executive means that the members of that executive are appointed and can be removed by the authority which appoints them. It means, therefore, that they must be able to explain their conduct to that authority. This proposal means that while three members of an executive council are to remain responsible to the Secretary of State, the two others are to be made responsible to the elected members. When they differ from their colleagues they are placed in a wholly false position. If they are loyal to their colleagues, they cannot explain their position to their electorate. Nor can they explain their position to their electorate without divulging the secrets of council. And if, to escape the falsity of this position, they resign, how then are their places to be filled? The same electorate can only return two new members charged to maintain the difference with those responsible to the Secretary of State. Such an arrangement can be fruitful in nothing but misunderstanding and anger, leading to deadlock. If, as I hope, there are to be more Indian members, they must be appointed by the Secretary of State, and be responsible to him on the same footing as their colleagues. Or else all must be responsible to an electorate on the same footing.

§ 9. We may now turn to plans for increasing control over all the functions of government as applied to the existing legislatures. The steps which can be taken in this direction are few and easy to trace.

The first step is to give the elected members a clear and decisive majority.

The second step is to divide the estimates into two sections, one containing police and other items of vital importance, to be reserved as at present to the control of the executive; the other section containing items which are left at the disposal of a legislature in which elected members have the decisive voice.

The third and last stage is to submit the whole budget, that is to say supply, to the control of the legislature.

§ 10. To begin with, it is necessary to note that the word 'control' may mean either of two things. It may mean the power of deciding that things are to be done. It may also be used to mean a power of deciding that they are not to be done. If the fabric of society is to be maintained, the government must in the last resort have power to do any-

be adopted. But the suggestion that these two members should be elected by the non-official members strikes at the root of the first principle of executive government. Responsibility of an executive means that the members of that executive are appointed and can be removed by the authority which appoints them. It means, therefore, that they must be able to explain their conduct to that authority. This proposal means that while three members of an executive council are to remain responsible to the Secretary of State, the two others are to be made responsible to the elected members. When they differ from their colleagues they are placed in a wholly false position. If they are loyal to their colleagues, they cannot explain their position to their electorate. Nor can they explain their position to their electorate without divulging the secrets of council. And if, to escape the falsity of this position, they resign, how then are their places to be filled? The same electorate can only return two new members charged to maintain the difference with those responsible to the Secretary of State. Such an arrangement can be fruitful in nothing but misunderstanding and anger, leading to deadlock. If, as I hope, there are to be more Indian members, they must be appointed by the Secretary of State, and be responsible to him on the same footing as their colleagues. Or else all must be responsible to an electorate on the same footing.

§ 9. We may now turn to plans for increasing control over all the functions of government as applied to the existing legislatures. The steps which can be taken in this direction are few and easy to trace.

The first step is to give the elected members a clear and decisive majority.

The second step is to divide the estimates into two sections, one containing police and other items of vital importance, to be reserved as at present to the control of the executive; the other section containing items which are left at the disposal of a legislature in which elected members have the decisive voice.

The third and last stage is to submit the whole budget, that is to say supply, to the control of the legislature.

§ 10. To begin with, it is necessary to note that the word 'control' may mean either of two things. It may mean the power of deciding that things are to be done. It may also be used to mean a power of deciding that they are not to be done. If the fabric of society is to be maintained, the government must in the last resort have power to do any-

thing necessary to maintain it. Before taking a decision, it may expose itself studiously to the influence of external opinion. It may modify its policy in a great variety of details to meet a great variety of views. But in the last analysis it will be faced by the necessity of making decisions which conflict with certain feelings and views. There may be all kinds of knowledge which a government lacks and which outside opinion can supply. But there is a kind of knowledge which actual responsibility, and that alone, can supply. A government which cannot or will not in the last resort apply that knowledge, and interpret it into action, is doomed; and the community it governs is also doomed to anarchy. A government may know that order cannot be enforced unless criminals are convicted, and that criminals cannot be convicted unless adequate protection can be given to witnesses. The existing law may not enable them to give this protection. The law must be changed, and, unless the necessary legislation can be passed, crime will increase until social order is destroyed. In England a government which cannot pass such legislation as it feels to be necessary, resigns. Another assumes its responsibility; and that responsibility brings the same knowledge, until both parties are convinced by experience of the necessity of making the change in the law required. But in India the existing executives cannot be removed by the legislatures, and, if they are to maintain order, cannot be divested of power to pass necessary laws however unpopular. They may and should be exposed to the influence of public opinion to the utmost. But in the last analysis they must have the power to decide which responsibility for maintaining order places upon them. The control which a government must have cannot be divided. It can only be undermined and gradually destroyed.

§ 11. The first step in all these schemes is to give the elected members a clear and decisive majority. When this is done there is no reason for keeping a small phalanx of official voters, who are not needed to speak, at the disposal of government. They are not needed when measures are popular; they are perfectly useless when measures are resented. Indeed, they are worse than useless, because their presence is exasperating. Mr. Gokhale proposed that the official members should not be more than were necessary for explaining the government case. He seems to have realized that their votes cease to have any value as a safeguard the moment they are reduced to a clear minority.

thing necessary to maintain it. Before taking a decision, it may expose itself studiously to the influence of external opinion. It may modify its policy in a great variety of details to meet a great variety of views. But in the last analysis it will be faced by the necessity of making decisions which conflict with certain feelings and views. There may be all kinds of knowledge which a government lacks and which outside opinion can supply. But there is a kind of knowledge which actual responsibility, and that alone, can supply. A government which cannot or will not in the last resort apply that knowledge, and interpret it into action, is doomed; and the community it governs is also doomed to anarchy. A government may know that order cannot be enforced unless criminals are convicted, and that criminals cannot be convicted unless adequate protection can be given to witnesses. The existing law may not enable them to give this protection. The law must be changed, and, unless the necessary legislation can be passed, crime will increase until social order is destroyed. In England a government which cannot pass such legislation as it feels to be necessary, resigns. Another assumes its responsibility; and that responsibility brings the same knowledge, until both parties are convinced by experience of the necessity of making the change in the law required. But in India the existing executives cannot be removed by the legislatures, and, if they are to maintain order, cannot be divested of power to pass necessary laws however unpopular. They may and should be exposed to the influence of public opinion to the utmost. But in the last analysis they must have the power to decide which responsibility for maintaining order places upon them. The control which a government must have cannot be divided. It can only be undermined and gradually destroyed.

§ 11. The first step in all these schemes is to give the elected members a clear and decisive majority. When this is done there is no reason for keeping a small phalanx of official voters, who are not needed to speak, at the disposal of government. They are not needed when measures are popular; they are perfectly useless when measures are resented. Indeed, they are worse than useless, because their presence is exasperating. Mr. Gokhale proposed that the official members should not be more than were necessary for explaining the government case. He seems to have realized that their votes cease to have any value as a safeguard the moment they are reduced to a clear minority.

The proposal to give a clear, decisive majority of elected members is equivalent to placing the executive at the mercy of a wholly elective council, unable to change the government and with no responsibility for seeing that it is carried on. The question which ought to be considered is whether any government under any circumstances ought to face that position.

§ 12. I know what is in the back of the minds of some of those who advocate such measures. They believe that the 'influence' of Government with a balance of members will suffice to secure them enough votes on most critical divisions. In its power of patronage, and of conferring titles and dignities, any government in India has means of influence far greater than exist elsewhere. It is the most upright government in the world; and yet, if you put it in such a position, it will infallibly yield to such temptation, without realizing, to begin with, that it is doing so. In any case it will suffer from the belief in the minds of its opponents that such means are used. In India it cannot escape that imputation. Under the existing system the imputation is already being made.

§ 13. The above remarks apply to the first stage, that in which the control of legislation is abandoned by the executive to the elected majority of the legislature. We now come to the second stage, that in which the executive retains control of funds needed for police and other vital services, while abandoning the appropriation of the balance of the revenue to the elected members. To begin with, this concession is largely illusory, because the real bone of contention is the allocation of funds between police and education, that is to say, between the two different sections of the estimates. The arrangement will not prevent elected members from attacking the executive for appropriating too much revenue for police, and for leaving too little for the heads submitted to the control of the legislature. The president can scarcely rule such speeches out of order. They will figure conspicuously in every budget debate, and help to aggravate the public temper. Now it is noticeable that, in the provincial legislatures, attacks on the Government of India for their military expenditure play little part, and unless sufficiently veiled, could be ruled out of order from the chair. In the district boards attacks on the provincial government for not reducing police expenditure, in order to give the boards more revenue for education, are not heard at all.

§ 14. One reason is that the financial relations of the

the information system. The information system is a set of components that interact to provide information services. The components are the hardware, software, and data that make up the system. The hardware includes the physical devices that store and process information. The software includes the programs that control the hardware and the data. The data is the information that is stored and processed by the system.

The information system is a complex system that is designed to meet the needs of its users. The system is designed to be flexible and adaptable to changing requirements. The system is designed to be secure and reliable. The system is designed to be easy to use and understand. The system is designed to be cost-effective and efficient. The system is designed to be scalable and expandable. The system is designed to be interoperable with other systems. The system is designed to be compatible with existing systems. The system is designed to be future-proofed for emerging technologies.

The information system is a key component of the information infrastructure. The information infrastructure is the set of systems and services that support the flow of information. The information infrastructure is a critical part of the economy and society. The information infrastructure is a key enabler of innovation and growth. The information infrastructure is a key driver of productivity and efficiency. The information infrastructure is a key source of knowledge and information. The information infrastructure is a key tool for communication and collaboration. The information infrastructure is a key asset for the government and the private sector.

Now it is noticeable that, in the provincial legislatures, attacks on the Government of India for their military expenditure play little part, and unless sufficiently veiled, could be ruled out of order from the chair. In the district boards attacks on the provincial government for not reducing police expenditure, in order to give the boards more revenue for education, are not heard at all.

§ 14. One reason is that the financial relations of the

province with India, and those of the district with the province, are settled by contracts covering a period of years. But the division of the revenue into two parts—one reserved to the control of government, and the other submitted to the control of the legislature—can scarcely be made on a fixed basis. It will have to be adjusted every year, and the readjustment will be the occasion of most exasperating discussions.

§ 15. The executive know that if they are to do their duty and to maintain order, they must spend so much on police. They cannot afford the balances demanded by the elected members for their own section of the estimates, without imposing new taxation. If elected members wish to spend more money on education, there must be fresh taxation. Now it is a sacred principle of public finance, in the most democratic countries of the British Commonwealth like Australia, that proposals for new taxation must be initiated and framed by the ministers of the Crown, and not by private members in the legislature. The executive may listen to suggestions from the legislature, but the formal proposal must be made and embodied in a Bill by the executive. In India, at any rate, the whole responsibility for the new tax, and all the unpopularity accruing therefrom, will rest on the executive.

§ 16. The able administrator, whose proposals I am criticizing, remarks: 'No official can satisfactorily serve two masters, whose instructions will be conflicting, without neglecting the interests of one.' It will readily be seen, however, that the proposal to divide the estimates into two parts violates this principle. The executive is to reserve control over one part of the estimates, yielding control of the other part to the legislature. The executive is to be responsible to the Secretary of State for one part of the estimates, and to the legislature for another part. For the legislators have no other executive of their own. To give them a separate executive for the matters assigned to their control is the very proposal which my critic condemns.

§ 17. So much for the second stage; and now we come to the third and last stage, that in which the legislators are given the whole control of supply as well as of legislation, the executive still remaining responsible to the Secretary of State. The executive can pass no laws, and obtain no money, except by the will of an elected legislature. But the legislature cannot remove the executive. The Government

Abstract—The purpose of this study was to determine if there were differences in the prevalence of musculoskeletal disorders among different types of workers. The study included 600 male employees from a large manufacturing company who had been employed for at least one year. They were divided into three groups based on their job type: manual laborers, machine operators, and office workers. Data were collected through self-reported questionnaires and medical records. Results showed that manual laborers had the highest prevalence of musculoskeletal disorders, followed by machine operators, while office workers had the lowest prevalence.

Abstract

province with India, and those of the district with the province, are settled by contracts covering a period of years. But the division of the revenue into two parts—one reserved to the control of government, and the other submitted to the control of the legislature—can scarcely be made on a fixed basis. It will have to be adjusted every year, and the readjustment will be the occasion of most exasperating discussions.

§ 15. The executive know that if they are to do their duty and to maintain order, they must spend so much on police. They cannot afford the balances demanded by the elected members for their own section of the estimates, without imposing new taxation. If elected members wish to spend more money on education, there must be fresh taxation. Now it is a sacred principle of public finance, in the most democratic countries of the British Commonwealth like Australia, that proposals for new taxation must be initiated and framed by the ministers of the Crown, and not by private members in the legislature. The executive may listen to suggestions from the legislature, but the formal proposal must be made and embodied in a Bill by the executive. In India, at any rate, the whole responsibility for the new tax, and all the unpopularity accruing therefrom, will rest on the executive.

§ 16. The able administrator, whose proposals I am criticizing, remarks: 'No official can satisfactorily serve two masters, whose instructions will be conflicting, without neglecting the interests of one.' It will readily be seen, however, that the proposal to divide the estimates into two parts violates this principle. The executive is to reserve control over one part of the estimates, yielding control of the other part to the legislature. The executive is to be responsible to the Secretary of State for one part of the estimates, and to the legislature for another part. For the legislators have no other executive of their own. To give them a separate executive for the matters assigned to their control is the very proposal which my critic condemns.

§ 17. So much for the second stage; and now we come to the third and last stage, that in which the legislators are given the whole control of supply as well as of legislation, the executive still remaining responsible to the Secretary of State. The executive can pass no laws, and obtain no money, except by the will of an elected legislature. But the legislature cannot remove the executive. The Government

is only removable by, and is, therefore, still responsible to, the Secretary of State. Of such an arrangement it can only be said that it must from its nature lead, and has in experience always led, to a constitutional deadlock, the paralysis of government and consequent social disorder. The results of such a condition in a country like India can best be judged by those who have spent their lives there.

§ 18. So far I have been discussing proposals which are the necessary and logical outcome of the Minto-Morley reforms. Schemes devised on that principle differ mainly in the distance they propose to go down one and the same road which ends in a precipice. The Congress League scheme would lead India to the very brink. To take one of its provisions only, it is laid down that executives, whether national or provincial, are bound by a resolution twice passed within thirteen months, despite the veto of the Governor-General. Let us take two not improbable cases. Suppose that a resolution is twice passed, obliging the executive to make primary education universal and compulsory within a given time. Such a step would involve a vast increase of taxation. But the whole onus of framing the necessary measures of taxation is left to the executive. That the legislature would shrink from passing such measures is more than probable. The executive would then be in a position of having to execute orders without the means of doing so. The legislature is to have power of issuing orders without the obligation of providing the funds to pay the cost. Such a scheme is impossible from the outset. It is also the negation of responsible government.

§ 19. Then again the legislature might order the executive to reduce the expenditure on police by one half. Such orders might involve an actual violation of contracts legally binding on government. It might also, in the judgement of the executive, involve an outbreak of public disorder. The opinion of the Governor-General would already have been recorded in his abortive veto, which would certainly not have been given without reference to the Secretary of State. As public spirited and honourable men, the executive, and indeed the Governor-General himself, would have no choice but to resign. The Secretary of State could not find others to take their place, and, without violating his conscience, could not ask them to do so. A deadlock with all its perils would be the result. 'I would press', writes one of the advocates of this scheme, 'for substantial control of government until we can get responsible govern-

is only removable by, and is, therefore, still responsible to, the Secretary of State. The legislature is to have power of issuing orders without the obligation of providing the funds to pay the cost. Such a scheme is impossible from the outset. It is also the negation of responsible government.

§ 19. Then again the legislature might order the executive to reduce the expenditure on police by one half. Such orders might involve an actual violation of contracts legally binding on government. It might also, in the judgement of the executive, involve an outbreak of public disorder. The opinion of the Governor-General would already have been recorded in his abortive veto, which would certainly not have been given without reference to the Secretary of State. As public spirited and honourable men, the executive, and indeed the Governor-General himself, would have no choice but to resign. The Secretary of State could not find others to take their place, and, without violating his conscience, could not ask them to do so. A deadlock with all its perils would be the result. 'I would press', writes one of the advocates of this scheme, 'for substantial control of government until we can get responsible govern-

ment. The step from the former to the latter will not be a long one.' ¹

§ 20. As one who desires to see responsible government established in India as quickly as possible, I venture to differ. Responsible government can and will be attained by straightforward means. It will not be attained by means designed to destroy all government in the process.

§ 21. The vital defect of the Minto-Morley principle is that it leaves the whole responsibility for government on one set of men, while rapidly transferring power to another set of men. It operates to render electorates less fit for responsible government, instead of more so. It creates a situation eminently calculated to exasperate the executive and legislature with each other, and therefore to throw the British Government and the Indian community at large into a posture of mutual antagonism. The elected members, untempered by any prospect of having to conduct the government themselves, have everything to gain by harassing government, and preventing it from passing the measures which it knows to be vital. In actual practice what happens is, not that government is defeated, but rather that it shrinks from proposing measures which it knows it cannot pass. The nerves of the state are slowly but surely paralysed. The elements of disorder grow and raise their heads. Every necessary measure for preserving order is denounced as an act of tyranny. The foundations of law decay, until suddenly, as in Ireland, the whole structure collapses, order has to be restored at the cost of bloodshed, and the growth of constitutional government is indefinitely postponed. No government suffering from creeping paralysis can maintain its prestige. Even in India the prestige of government does not depend upon outward show, upon ceremonies, uniforms, salutes, and the like, but simply on ability to discharge its functions. I regard the future establishment of responsible government in India as the greatest achievement in which my own race can share. But government, as the leaders of the Russian revolution are discovering, is the only possible basis of self-government. Home rule could be given to Scotland or Wales, if they asked for it, to-morrow. The real difficulty of giving it to Ireland is that government has never been firmly established in that country. In India no measures are real steps to self-government which operate to render it ungovernable in the process. Under the plan proposed, no elective

¹ Letter to the *Bengalee*, dated November 22, 1917.

member of the legislature contracts any responsibility for the maintenance of order. He merely develops into a hostile critic of the government's endeavour to do so. He is given no chance of demonstrating any capacity to get things done. Popular leaders are brought to the front mainly by ability to harass the government in trying to do them. There is no gradual transfer of responsibility. When public irritation has been raised to boiling point, and the final deadlock is reached, the only further concession which remains is to make the executive responsible to, and therefore, removable by, the legislature. This means the institution of responsible government at one stroke in a community where electors and legislators have been given no previous exercise in political control. The intermediate stage of divided control is so eminently calculated to produce public irritation that it would, in my opinion, be far safer to take this step at the outset. That course, however, is specifically rejected in the recent pronouncement of the Secretary of State : it does not therefore come within the scope of these notes to discuss it.

LETTER V

THE FRUITS OF EXPERIENCE

§ 1. THE fact is that no system will succeed under which it is not possible in the last instance to secure harmony between the executive and legislature in matters essential to government. The discovery of the means whereby this can be done in a government based on election is the great achievement of England ; and it is worth while glancing at the manner in which that discovery was arrived at. In the early Middle Ages the King ruled and enacted the laws. Then came the stage at which Parliament had acquired the sole right of making laws and voting supply, while the executive power remained in the hands of the King and his ministers. There were no legitimate means of harmonizing the action of the executive and legislature, and conflict between the two, mitigated by corruption of Parliament by the Crown, was the keynote of the constitutional struggles of the seventeenth century which ended in the downfall of the Stuart line. The first two Hanoverian kings, who succeeded the Stuarts, were foreigners who knew no English and were mainly interested in their German dominions. The government of Great Britain they left to ministers who

member of the legislature contracts any responsibility for the maintenance of order. He merely develops into a hostile critic of the government's endeavour to do so. He is given no chance of demonstrating any capacity to get things done. Popular leaders are brought to the front mainly by ability to harass the government in trying to do them. There is no gradual transfer of responsibility. When public irritation has been raised to boiling point, and the final deadlock is reached, the only further concession which remains is to make the executive responsible to, and therefore, removable by, the legislature. This means the institution of responsible government at one stroke in a community where electors and legislators have been given no previous exercise in political control. The intermediate stage of divided control is so eminently calculated to produce public irritation that it would, in my opinion, be far safer to take this step at the outset. That course, however, is specifically rejected in the recent pronouncement of the Secretary of State : it does not therefore come within the scope of these notes to discuss it.

LETTER V

THE FRUITS OF EXPERIENCE

§ 1. THE fact is that no system will succeed under which it is not possible in the last instance to secure harmony between the executive and legislature in matters essential to government. The discovery of the means whereby this can be done in a government based on election is the great achievement of England ; and it is worth while glancing at the manner in which that discovery was arrived at. In the early Middle Ages the King ruled and enacted the laws. Then came the stage at which Parliament had acquired the sole right of making laws and voting supply, while the executive power remained in the hands of the King and his ministers. There were no legitimate means of harmonizing the action of the executive and legislature, and conflict between the two, mitigated by corruption of Parliament by the Crown, was the keynote of the constitutional struggles of the seventeenth century which ended in the downfall of the Stuart line. The first two Hanoverian kings, who succeeded the Stuarts, were foreigners who knew no English and were mainly interested in their German dominions. The government of Great Britain they left to ministers who

could control the House of Commons. George III, who knew English, and was more interested in his British than in his German dominions, tried to go back on this system. By wholesale corruption he endeavoured to make Parliament amenable to his will, and chose as his ministers, not the real popular leaders, but men who would stoop to be instruments of corruption. One result was the loss of America. The situation was saved by the fact that the younger Pitt, the popular leader, gained a great ascendancy over the King, whose mind presently began to fail. The principle that the King must choose as his ministers men who for the time being were able to command a majority in the legislature, was gradually established. The principle was finally confirmed with the advent to the throne of a girl Queen in 1837. Thenceforward the Sovereign was removed from the position of ruler to that of an hereditary president in a commonwealth. The power of the mediaeval Sovereign passed to the leaders, who, for the time being, were able to command a majority in Parliament. This command of the legislature was the condition of office. *Responsible government is simply a means of securing that the executive can control the legislature, the necessary condition of all government.*

§ 2. The history of constitutional government in Scotland, Ireland, and the Colonies enforces the same lesson.

§ 3. The Scottish parliament first came into effective being in the struggle with the Stuarts. The crisis began when, in 1693, the Scottish parliament passed a Bill fatal to the monopoly of the English East India Company. Tweeddale, the King's minister, yielding to his feelings as a Scottish nationalist, disobeyed the orders of William III and ratified the Bill. Serious complications with Spain were the result, and finally the financial ruin of Scotland. The efforts made to render the system workable by corruption broke down. Nationalist feeling was too strong for such expedients. The crisis was precipitated in 1701, when the Scottish parliament refused to pass a Bill providing that on the death of Queen Anne, the same King should succeed to the Scottish as to the English throne. Separation and war were avoided by the merging of the English and Scottish parliaments in one Parliament of Great Britain. The problem of securing harmony between the legislatures and executives in both countries was thus consolidated and transferred to Westminster to find its solution there a century later.

§ 4. The very same problem was provoked by the Irish

The power of the mediaeval Sovereign passed to the leaders, who, for the time being, were able to command a majority in Parliament. This command of the legislature was the condition of office. *Responsible government is simply a means of securing that the executive can control the legislature, the necessary condition of all government.*

§ 2. The history of constitutional government in Scotland, Ireland, and the Colonies enforces the same lesson.

§ 3. The Scottish parliament first came into effective being in the struggle with the Stuarts. The crisis began when, in 1693, the Scottish parliament passed a Bill fatal to the monopoly of the English East India Company. Tweeddale, the King's minister, yielding to his feelings as a Scottish nationalist, disobeyed the orders of William III and ratified the Bill. Serious complications with Spain were the result, and finally the financial ruin of Scotland. The efforts made to render the system workable by corruption broke down. Nationalist feeling was too strong for such expedients. The crisis was precipitated in 1701, when the Scottish parliament refused to pass a Bill providing that on the death of Queen Anne, the same King should succeed to the Scottish as to the English throne. Separation and war were avoided by the merging of the English and Scottish parliaments in one Parliament of Great Britain. The problem of securing harmony between the legislatures and executives in both countries was thus consolidated and transferred to Westminster to find its solution there a century later.

§ 4. The very same problem was provoked by the Irish

parliament in the reign of Henry VII. The problem was partly solved by Poyning's law, which deprived the Irish of all power of initiative. Many other causes were operating to prevent the establishment of order in Ireland. The system, such as it was, was worked by open corruption. For value paid in titles, patronage, and coin, certain powerful families, called the ' Undertakers ', made themselves responsible for obtaining in the legislature the majorities required by the Irish executive. But again national feeling was too strong for corruption. In 1782, in the throes of the American War, Poyning's law was repealed, and Ireland was given a constitution strictly comparable with that which is now proposed for India. Corruption was worked to the full; but government atrophied, till, in 1798, Ireland was a scene of weltering chaos and bloodshed. The remedy was found by merging the Irish in the British Parliament. The difficulty of granting Home Rule to Ireland to-day largely has its roots in the anarchy which prevailed throughout the eighteenth century.

§ 5. In the American colonies the same system obtained from the outset. The executives could not obtain the laws necessary to secure order between the colonists and the Indians, nor yet the revenues needed for purely American purposes. The result was the revolution and secession of the colonies. The position had then to be faced by Washington. The basic elements of American society were drawn from the most law-abiding classes in England. But Washington found that he was dealing with a society which had grown unused to the restraints of any government whatever. Implored to use his great influence to restore order in Massachusetts, he replied with the memorable aphorism, ' Influence is not government '. Charged with the task of creating an American government, he solved the problem by making the executive and legislature amenable to the same electorate. In a rigid and imperfect manner he anticipated the great discovery of responsible government, which had yet to be made in England.

§ 6. The same features as had vitiated the American system were reproduced under the Constitutional Act of 1791 in the Provinces of Upper and Lower Canada. The legislatures were elective, while the executives, though mainly if not entirely consisting of Canadians, were appointed from England. Chronic and increasing friction were the result, leading to deadlock, and ending in the third decade of the nineteenth century in two rebellions, one in each province.

But Washington found that he was dealing with a society which had grown unused to the restraints of any government whatever. Implored to use his great influence to restore order in Massachusetts, he replied with the memorable aphorism 'Influence is not government'. Charged with the task of creating an American government, he solved the problem by making the executive and legislature amenable to the same electorate. In a rigid and imperfect manner he anticipated the great discovery of responsible government, which had yet to be made in England.

§ 6. The same features as had vitiated the American system were reproduced under the Constitutional Act of 1791 in the Provinces of Upper and Lower Canada. The legislatures were elective, while the executives, though mainly if not entirely consisting of Canadians, were appointed from England. Chronic and increasing friction were the result, leading to deadlock, and ending in the third decade of the nineteenth century in two rebellions, one in each province.

Lord Durham was then sent out, and produced a report on the whole situation, which first explained to Englishmen the nature of the great discovery they had made at home—responsible government. Durham recommended its application to Canada. He pointed out that no executive can continue to discharge its functions unless it can control the legislature. This, however, was impossible, where, as in Canada, the mainspring of the executive was in London, while the mainspring of the legislature was in Canada. The Imperial Government must either abolish the elective principle in the legislature, and so make it subordinate to the executive, or else place the executive in the hands of the leaders who controlled the legislature for the time being. The power of the executive to carry laws, money and otherwise, essential to the maintenance of the Queen's government, was an absolute necessity. His advice was taken, and applied, not only to Canada, but also to other parts of the British Commonwealth, wherever the material for adequate electorates already existed.

§ 7. The system condemned by Durham was recently revived in the case of the Transvaal in the Lyttelton constitution of 1906. The files of *Hansard* are not accessible, but I venture to suggest that, if any one will search them, he will find that the case urged against that measure by the Liberal opposition rests on the considerations adduced in these pages. That constitution never came into force; but, had it done so, no one, in the light of after events, can doubt that it would have come to a deadlock in the first session. The Appropriation Bill would never have been passed, and the governor would have been faced with the same situation as confronted Durham in Canada.

§ 8. In all these cases, be it noted, the materials for electorates existed already. These struggles were not, in fact, the exercise which fitted electorates for responsible government. Rather they resulted from communities already fit for self-government, who were feeling about in the darkness, until they discovered by trial, failure, and retrial, the mechanism whereby the action of the executive and legislature could be harmonized on the basis of popular government. The lesson of these blunders can be read. There is nothing to be gained by repeating them in a country like India, but infinite peril by reason of the irritation they cause.

§ 9. The experience gained on this subject in various parts of the British Commonwealth is ably reviewed by A. Lawrence Lowell, the president of Harvard University, in the

The lesson of these blunders can be read. There is nothing to be gained by repeating them in a country like India, but infinite peril by reason of the irritation they cause.

§ 9. The experience gained on this subject in various parts of the British Commonwealth is ably reviewed by A. Lawrence Lowell, the president of Harvard University, in the

second volume of his standard work, *The Government of England*, which is, by the way, on the syllabus of the Calcutta University. He then goes on to examine two cases in which the Imperial Government, having advanced along the lines now proposed in India, had to go back instead of advancing to responsible government.

THE CROWN COLONIES

¹The old system of a governor appointed by the Crown, coupled with a legislature elected by the people, has disappeared also in most of the colonies whose inhabitants are not mainly of European origin, but in this case the evolution has proceeded in the opposite direction. And here it may be observed that in some colonies where the population was white a hundred years ago, it is no longer so now; not in consequence of any great change in the proportion of the races, but because however numerous the slaves might be, they were, until freed, of no political account. In this way most of the British West Indies, where formerly the Europeans were almost alone considered, are now filled with a teeming free population, of which the whites form a very small part.

The history of Jamaica may serve to illustrate the transformations by which the earlier form of government has been turned into that of a modern crown colony. Captured from the Spaniards in 1655, the island was rapidly settled by Englishmen, and Lord Windsor, on his appointment as Governor in 1662, was instructed to call legislative assemblies according to the custom of the other colonies. Thus a government of the familiar type was created, with a royal governor, an appointed council, and an elected assembly. A score of years had not passed before friction with England began, and although in this instance matters were soon adjusted, troubles arose again later, and throughout the eighteenth century we find in a milder form quarrels, of the same nature as in the North American colonies, constantly breaking out between the Governor and the Assembly. That body refused for years to vote a permanent revenue, and made appropriations to be expended only by officers appointed by itself. In fact, by a series of local acts the collection and expenditure of the revenue was taken almost entirely out of the hands of the Governor, and transferred to commissioners who were really the members of the Assembly under another name. Had the island been inhabited only by Englishmen, these difficulties might eventually have led, as in Canada, to the grant of a responsible ministry; but the presence of slaves, ten times as numerous as the free whites, led in the nineteenth century to both economic and political upheavals.

In 1807 Parliament forbade the slave trade, and this caused

a scarcity of labour in Jamaica. In 1833 it went much further, and against a protest of the Assembly denying its right to interfere in the internal affairs of the island, it abolished slavery, granting to the planters a compensation which they regarded as wholly inadequate. As the negroes in that climate could easily get a living from unoccupied lands, without working for wages, emancipation struck a severe blow at the industries of the colony. In 1838 Parliament again undertook to legislate about the domestic concerns of the island; this time by an act which took the regulation of prisons out of the hands of the local authorities. Whereupon the Assembly in consideration of 'the aggressions which the British Parliament continue to make on the rights of the people' of the colony, resolved to 'abstain from any legislative function, except such as may be necessary to preserve inviolate the faith of the island with the public creditor'. The English ministry then brought in a bill to suspend the constitution of Jamaica. This, however, was so nearly defeated in the House of Commons, that the Cabinet resigned, and although Sir Robert Peel failed to form a ministry on account of the famous 'Bedchamber Question', Melbourne on returning to power made no second attempt to pass the bill.

The planters must have felt that England was hounding them to their ruin, for in 1846 the foundations of their former prosperity were undermined still further by the adoption of free trade, and the removal of preferential tariffs in favour of sugar from the British West Indies. The Assembly, under the pressure of economic distress, passed retrenchment bills, which the appointed Council rejected as a breach of public faith, and the deadlock continued until, by the offer of a loan of half a million pounds, the Assembly was induced in 1854 to consent to a revision of its fundamental laws. The new constitution of that year enlarged the powers of the Governor in various ways; among others by transferring to him the functions hitherto exercised by the members of the Assembly when acting as commissioners for collecting and expending the revenue; and although he was to be assisted in the performance of his duties by an Executive Committee composed of three members of the Assembly and one of the Council, those members were to be selected by him.

For half a dozen years the new machinery worked well enough, but the opportunity for political deadlocks had by no means been removed, and in 1860 strife between the Governor and the Assembly began afresh. The first occasion therefore was a question about the responsibility of the Executive Committee for an over-expenditure; but the quarrel, as often happens, wandered off into other paths, and might have continued merrily on its way had not an alarming insurrection of the negroes broken out in 1865. Governor Eyre was accused of cruelty in suppressing it, but his action, which was vigorous and decisive, won the admiration of the white people. They had, in fact, been thoroughly frightened, and were ready to

The first step in the process is to identify the problem. This involves gathering information about the situation and the people involved. Once the problem is identified, the next step is to analyze it. This involves breaking the problem down into its components and understanding how they are related. The third step is to develop a plan. This involves deciding on the best way to solve the problem and the steps that need to be taken. The fourth step is to implement the plan. This involves putting the plan into action and making sure that everything is done correctly. The final step is to evaluate the results. This involves checking to see if the problem has been solved and if the solution was the best one.

1. *Journal of the American Medical Association*, 2000; 284: 2689-2695.

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.05	0.02	2.50	0.01
Gender of the head of household (Male = 1, Female = 0)	-0.10	0.03	-3.33	0.00
Constant	1.50	0.10	15.00	0.00

The regression results indicate that the number of children in the household is positively related to the age of the head of household and negatively related to the gender of the head of household. Specifically, for every one-year increase in the age of the head of household, the number of children in the household increases by 0.05, holding all other variables constant. Conversely, for every one-unit increase in the gender variable (from female to male), the number of children in the household decreases by 0.10, holding all other variables constant.

a scarcity of labour in Jamaica. In 1833 it went much further, and against a protest of the Assembly denying its right to interfere in the internal affairs of the island, it abolished slavery, granting to the planters a compensation which they regarded as wholly inadequate. As the negroes in that climate could easily get a living from unoccupied lands, without working for wages, emancipation struck a severe blow at the industries of the colony. In 1838 Parliament again undertook to legislate about the domestic concerns of the island; this time by an act which took the regulation of prisons out of the hands of the local authorities. Whereupon the Assembly in consideration of 'the aggressions which the British Parliament continue to make on the rights of the people' of the colony, resolved to 'abstain from any legislative function, except such as may be necessary to preserve inviolate the faith of the island with the public creditor'. The English ministry then brought in a bill to suspend the constitution of Jamaica. This, however, was so nearly defeated in the House of Commons, that the Cabinet resigned, and although Sir Robert Peel failed to form a ministry on account of the famous 'Bedchamber Question', Melbourne on returning to power made no second attempt to pass the bill.

The planters must have felt that England was hounding them to their ruin, for in 1846 the foundations of their former prosperity were undermined still further by the adoption of free trade, and the removal of preferential tariffs in favour of sugar from the British West Indies. The Assembly, under the pressure of economic distress, passed retrenchment bills, which the appointed Council rejected as a breach of public faith, and the deadlock continued until, by the offer of a loan of half a million pounds, the Assembly was induced in 1854 to consent to a revision of its fundamental laws. The new constitution of that year enlarged the powers of the Governor in various ways; among others by transferring to him the functions hitherto exercised by the members of the Assembly when acting as commissioners for collecting and expending the revenue; and although he was to be assisted in the performance of his duties by an Executive Committee composed of three members of the Assembly and one of the Council, those members were to be selected by him.

For half a dozen years the new machinery worked well enough, but the opportunity for political deadlocks had by no means been removed, and in 1860 strife between the Governor and the Assembly began afresh. The first occasion therefore was a question about the responsibility of the Executive Committee for an over-expenditure; but the quarrel, as often happens, wandered off into other paths, and might have continued merrily on its way had not an alarming insurrection of the negroes broken out in 1865. Governor Eyre was accused of cruelty in suppressing it, but his action, which was vigorous and decisive, won the admiration of the white people. They had, in fact, been thoroughly frightened, and were ready to

surrender their political rights for the sake of having a strong executive. At the close of 1866, therefore, the legislature of Jamaica authorized the Queen to create a new government for the island, and by an Act of Parliament the elective Assembly, after a life of two hundred years, came to an end.

Under the constitution, which went into effect in 1867, the island became a crown colony with a single Legislative Council, composed of six official and six unofficial members, all appointed by the Crown. The former were the principal officers of state in the island, such as the Colonial Secretary, the Attorney-General and the Commander of the Troops, while the Governor himself acted as chairman. But the political experiments in Jamaica were not yet over. After a few years the planters recovered from their fright, and longed to have the administration of public affairs once more in their own hands. In 1876 they sent a memorial to the House of Commons, asking that the inhabitants might have representatives in the Council and might control the revenues. The Secretary of State replied that a suggestion to alter the constitution so recently established could not be entertained. But when similar petitions were made in later years, the government yielded to the extent of permitting half of the seats in the Council to be elective. The change was made by the constitution of 1884, whereby the Council was to consist of the Governor, and of nine appointed,¹ and nine elected, members. Inasmuch as the Governor could control the appointed members, such an arrangement would appear to place a constant majority at his command, but this result was modified by a provision that a two-thirds vote of the elective members on financial questions, or a unanimous vote of those members on any other subject, should be decisive, unless the Governor considered the matter of paramount public importance. In other words, he had power to override the elected members, but he was not intended to use that power for current affairs.

Except for a few changes that do not concern us here, the Constitution of 1884 remained unaltered until 1897, when the Council was enlarged in a way that must be described in order to make clear the present method of controlling that body. The elected members were increased from nine to fourteen, one for each of the parishes in the island. At the same time the official and appointed members were raised only to ten, or, including the Governor, to eleven, but he was empowered to add four more if a question of great importance made it necessary to do so. In short, he was nominally in a minority in the Council, but as a last resort could transform his appointees into a majority. This he did a couple of years later, after a long series of altercations with the elected members, chiefly on the subject of the taxes. For some time insular finance had been perplexing. There had been deficits, and the Governor with the appointed members felt that the revenue must be made to balance

¹ Four of them official, and five unofficial.

surrender their political rights for the sake of having a strong executive. At the close of 1866, therefore, the legislature of Jamaica authorized the Queen to create a new government for the island, and by an Act of Parliament the elective Assembly, after a life of two hundred years, came to an end.

Under the constitution, which went into effect in 1867, the island became a crown colony with a single Legislative Council, composed of six official and six unofficial members, all appointed by the Crown. The former were the principal officers of state in the island, such as the Colonial Secretary, the Attorney-General and the Commander of the Troops, while the Governor himself acted as chairman. But the political experiments in Jamaica were not yet over. After a few years the planters recovered from their fright, and longed to have the administration of public affairs once more in their own hands. In 1876 they sent a memorial to the House of Commons, asking that the inhabitants might have representatives in the Council and might control the revenues. The Secretary of State replied that a suggestion to alter the constitution so recently established could not be entertained. But when similar petitions were made in later years, the government yielded to the extent of permitting half of the seats in the Council to be elective. The change was made by the constitution of 1884, whereby the Council was to consist of the Governor, and of nine appointed,¹ and nine elected, members. Inasmuch as the Governor could control the appointed members, such an arrangement would appear to place a constant majority at his command, but this result was modified by a provision that a two-thirds vote of the elective members on financial questions, or a unanimous vote of those members on any other subject, should be decisive, unless the Governor considered the matter of paramount public importance. In other words, he had power to override the elected members, but he was not intended to use that power for current affairs.

Except for a few changes that do not concern us here, the Constitution of 1884 remained unaltered until 1897, when the Council was enlarged in a way that must be described in order to make clear the present method of controlling that body. The elected members were increased from nine to fourteen, one for each of the parishes in the island. At the same time the official and appointed members were raised only to ten, or, including the Governor, to eleven, but he was empowered to add four more if a question of great importance made it necessary to do so. In short, he was nominally in a minority in the Council, but as a last resort could transform his appointees into a majority. This he did a couple of years later, after a long series of altercations with the elected members, chiefly on the subject of the taxes. For some time insular finance had been perplexing. There had been deficits, and the Governor with the appointed members felt that the revenue must be made to balance

¹ Four of them official, and five unofficial.

the expenditure; while the elected members, suffering under the weight of the existing taxation, were loath to increase their burdens. Finally, in 1899, the Governor proposed a tax on typewriters, sewing-machines, books, and magazines, and when the elected members refused to vote for it, he made appointments to the four additional seats on the Council. The step was taken after a consultation with Mr. Chamberlain, then Secretary of State for the Colonies, and although the additional members resigned soon afterwards, on an undertaking by the elective councillors to vote for the tax, their appointment showed that the home government was prepared in cases of serious disagreement to exert its authority by overpowering the elective element in the Council.

The history of Jamaica is the more instructive, because the government in its transition from the old type to its present form has passed through an unusual variety of metamorphoses. It has had alongside of the Governor an Assembly wholly elected, a single Legislative Council wholly appointed, and a Council in which the elected members were, or could be made, a minority. Each of these forms is still found in the crown colonies, but save in a very few cases the first of them has disappeared and the prevalent types are those in which the legislature is composed exclusively, or for the major part, of appointed members.

A more recent example of the tendency to do away with an elective assembly, where full responsible government cannot be granted, may be seen in the case of Malta. After its capture from the French in 1800 the island was at first under the sole authority of a Governor, who was often the Commander-in-Chief of the forces there; and in fact it is the great importance of Malta as a naval base that has prevented it from acquiring any large measure of self-government. Strategic considerations will not permit the people to govern themselves as they please, and yet the inhabitants, who enjoyed a representative assembly before the coming of the Knights of St. John, are so numerous that the post cannot be treated, like Gibraltar, simply as a garrison. But this peculiar condition, which has precluded government by responsible ministry on one side, and pure military rule on the other, does not make the political events in the island less valuable as an illustration of the difficulty of maintaining a semi-popular form of administration.

An advisory council was associated with the government of Malta in 1838-9, but no trace of popular representation was introduced until 1849, when the Crown by Letters Patent created a Council of Government, composed of the Governor with nine appointed, and eight elected, members. This gave the people of the island a chance to make their opinions heard, but not to make them prevail, for the government always had a majority at its command, and at times used it so freely as to foster a strong desire to bring the local administration under real popular control. The agitation continued for many years, and finally a plan for a new Council, based upon petitions

Each of these forms is still found in the crown colonies, but save in a very few cases the first of them has disappeared and the prevalent types are those in which the legislature is composed exclusively, or for the major part, of appointed members.

A more recent example of the tendency to do away with an elective assembly, where full responsible government cannot be granted, may be seen in the case of Malta. After its capture from the French in 1800 the island was at first under the sole authority of a Governor, who was often the Commander-in-Chief of the forces there; and in fact it is the great importance of Malta as a naval base that has prevented it from acquiring any large measure of self-government. Strategic considerations will not permit the people to govern themselves as they please, and yet the inhabitants, who enjoyed a representative assembly before the coming of the Knights of St. John, are so numerous that the post cannot be treated, like Gibraltar, simply as a garrison. But this peculiar condition, which has precluded government by responsible ministry on one side, and pure military rule on the other, does not make the political events in the island less valuable as an illustration of the difficulty of maintaining a semi-popular form of administration.

An advisory council was associated with the government of Malta in 1838-9, but no trace of popular representation was introduced until 1849, when the Crown by Letters Patent created a Council of Government, composed of the Governor with nine appointed, and eight elected, members. This gave the people of the island a chance to make their opinions heard, but not to make them prevail, for the government always had a majority at its command, and at times used it so freely as to foster a strong desire to bring the local administration under real popular control. The agitation continued for many years, and finally a plan for a new Council, based upon petitions

by the Maltese themselves, was put into effect by Letters Patent of 1887. It reduced the appointed members to six, and increased the elected ones to fourteen, of whom ten were chosen by the ordinary voters, while the clergy, the nobility, the graduates of the university, and the chamber of commerce had one representative apiece. Thus the elected members preponderated heavily, and, what is more, on money bills their votes alone were to be counted. On the other hand, the Crown had not only the usual veto and an exclusive right to initiate measures dealing with the revenue, but reserved to itself an ultimate power to legislate independently by Order in Council.

The Maltese soon found that their actual control over the government was less than they had expected, and as early as 1891, after the elected members had resigned as a protest against the policy of the Governor, a riot was caused by the attempt of a mob to overawe the Council. Dissensions continued, with resignation as an occasional resource, but the popular party had no specific issue as a basis for opposition until 1898. In that year Colonel Hewson, a British army officer, who had given evidence in English as a witness, and was asked to sign a translation of it into Italian, the official language of the court, refused to do so on the ground that he could not read what he was required to sign. Thereupon he was committed for contempt of court: and although the Governor saved him from going to jail, indignation was felt that a British officer should be ordered to prison by a British court for refusing to sign a statement in a foreign tongue that he did not understand. Mr. Chamberlain directed the Governor to lay before the Council ordinances making English as well as Italian the official language of the courts, and when the Council rejected them, they were enacted by Order in Council in March 1899. The elected members protested, resigned, were returned again without opposition, and then refused to pass money bills, which were in turn put in force by Order in Council.

The question of language involved a singular state of affairs. Italian, which had been substituted for Latin in the courts after the English occupation, was the tongue of the educated classes but not of the great mass of the population, who speak Maltese, a dialect based upon Arabic. It could fairly be asserted, therefore, that English was quite as appropriate an official language as Italian. The question affected the schools as well as the courts. Some time before a plan had been put in force whereby the children were taught Maltese in the two youngest classes, and then the parents were allowed to choose whether they should study English or Italian, with the result that by far the greater part of them chose the former. But now the elected members of the Council, claiming that the choice of the parents was not really free, demanded that Italian should be the regular subject of study, and declined to pass some of the appropriations for the schools unless an ordinance for the

But now the elected members of the Council, claiming that the choice of the parents was not really free, demanded that Italian should be the regular subject of study, and declined to pass some of the appropriations for the schools unless an ordinance for the

purpose was adopted. In an interview with Mr. Chamberlain their delegates went much farther, asking for responsible government. Such a request was of course refused, with an intimation that the elected members did not fairly represent the people of the colony; and in view of the small proportion of voters and the still smaller number who went to the polls, this may very well have been true.

The leaders of the opposition to the government set on foot a vigorous agitation in the island; while in the Council they passed their ordinance for the schools; only to see it met by a veto. Thereupon they rejected appropriations, resigned, and were again re-elected. Clearly the constitution as it stood did not work. The popular element was too strong or too weak to please any one; and finally in 1903 the gordian knot was cut by Letters Patent which abolished the Council, and substituted another composed, in addition to the Governor, of ten appointed, and only eight elected, members. The Governor was given also the sole right of initiating measures, and thus the Council was reduced to a consultative body where the representatives of the people can express their opinions but have no means of putting them into effect. After an experience of seventeen years the Constitution of 1887 has been abandoned and the conditions of 1849 have been restored. Nor was the result due to a change of party in England, for the Letters Patent of 1887 had been issued by a Conservative ministry. *The constitution of that year was doomed to fail, because it created two independent forces that were almost certain to come into collision, without any power that could bring them into harmony. Parliamentary government avoids deadlocks by making the executive responsible to the legislature. Presidential government limits deadlocks, because all the organs of the state must ultimately submit to a superior tribunal, the electorate of the nation. But a legislature elected by the people, coupled with a Governor appointed by a distant power, is a contrivance for fomenting dissensions and making them perpetual.*¹

§ 10. Such being the experience of the British Commonwealth, as interpreted by an American investigator of the highest authority, advocates of this principle are commonly driven to defend it by appealing to the examples of Germany and Austria. The late Mr. Gokhale, for instance, advised that 'The relations of the executive government and the legislative councils so constituted should be roughly similar to those between the Imperial Government and the Reichstag in Germany'. Before, however, we accept German guidance in the task of extending self-government to India, it is well to examine a little more closely, than I think Mr. Gokhale

¹ The constitution now proposed for Malta is deliberately based on the principle of dyarchy.

had done, the inner working of the elective institutions which the monarchs of Central Europe have used as a mask for despotism. Some years ago I had an informing conversation on this subject with the correspondent of the *Frankfurter Zeitung*, which was then an organ of German liberalism. 'How is it', I asked, 'that your Emperor is able to pass his budgets and measures through an assembly based on male adult suffrage?' 'Because', my German friend replied, 'whenever the Reichstag has rejected measures which the Emperor deems essential, the Emperor has dissolved them, and appealed to the nation to support him. And so far the nation has always given the Emperor the majority for which he has asked.' 'Do you mean', I inquired, 'that your Emperor goes electioneering, and that the voters support him against their own representatives?' 'That is what it comes to,' he said. 'You, of course, do not understand the power which the Kaiser's claim to divine right still has over the minds of the German people, a power reinforced by an unbroken chain of military success for the last century.' 'But this claim to superior wisdom based on divine right', I objected, 'will scarcely continue to prevail indefinitely with an educated people like the Germans. Sooner or later the voters will refuse to listen to the Kaiser's appeal, and will support their own representatives by returning a majority pledged to reject the Emperor's measures.' My friend threw up his hands in horror and cried, 'God forbid! We should then lose our constitution. The Emperor would simply dismiss the Reichstag, collect the taxes, and proceed to administer the country without them, with the army at his back.' 'But the army', I urged, 'is the nation in arms. Why do you fear that the nation in arms should support the Emperor against the nation at the ballot box?' 'It is just the habit of military discipline', he replied. 'So long as the German people are dazzled by a course of unbroken military success, the prestige of the monarchy will remain unimpaired and all-powerful. The power of the head of the army over the soldiers will be stronger than the spirit of freedom amongst those soldiers in private life.' From that moment onwards I felt that war was inevitable. If the system rested on the military prestige of the dynasty, and the habit of blind obedience in the ranks, that habit would have to be exercised in war, and the prestige of the dynasty would have to be refreshed with new victories. And now, when the failure of the Kaiser's brutal designs is casting its shadow on the dynasty's prestige, the Reichstag

If the system rested on the military prestige of the dynasty, and the habit of blind obedience in the ranks, that habit would have to be exercised in war, and the prestige of the dynasty would have to be refreshed with new victories. And now, when the failure of the Kaiser's brutal designs is casting its shadow on the dynasty's prestige, the Reichstag

is beginning to assert its claim to make and unmake the executive. To that claim the Kaiser is opposing his own, that his ministers are responsible to him alone, as he himself is responsible, not to the people of Germany, but to God. The system cannot outlast the failure and fall of the Prussian autocracy. Reformers will be wise to look for some other model upon which to base the first steps towards responsible government in India.

§ 11. Outside the British Commonwealth a number of countries have endeavoured to pass from paternal to popular government. Of these I can only think of two important cases in which the transition has been effected without a long series of revolutions and civil disorders. These two are Italy and Japan. The nucleus of modern Italy was Piedmont, a state in which constitutional government had already been achieved. In both these cases the transition was watched and tended by native monarchs who, unlike the German Emperor, used their personal prestige to guide the nation from paternal to popular government. Mr. Price Collier states that on several occasions, when the opposition in the Japanese Assembly threatened to embarrass the Government, a message was sent to them from the Mikado that their speeches disturbed the souls of his ancestors. Instantly the opposition collapsed. In plain words the Mikado, in guiding his people towards responsible government, made full use of the religious veneration with which his throne was regarded. In India an alien government has no such appeal to make. Still less can it go on election campaigns like the German Emperor.

§ 12. Elsewhere the movement towards responsible government has proceeded through a series of violent and bloody disorders. France, Mexico, the South American Republics, Turkey, Persia, China, and Russia are cases in point. Not all of these countries can be said to have yet reached the goal of responsible government; and the failure has been most marked wherever the country was so large that it was necessary to organize provincial democracies as well as a central democracy, and bring these different organs of government into proper relation with each other. The reason for the success achieved in America and the British Dominions was in great measure due to the fact that the provincial democracies were thoroughly developed and established before any attempt was made to bring the central government under popular control.

LETTER VI

ALTERNATIVE METHODS COMPARED

§ 1. IMPERIAL, and even provincial, executives are somewhat removed from the facts to which their decisions relate. The springs of action may be weakened at head-quarters some time before the effects are seen in the field. A poison may be none the less deadly because it is slow, but the connexion of cause and effect are harder to trace. It is perilously easy for one generation to ignore the results of a system which will only mature in the time of their successors. But when in 1912 Mr. Gokhale proposed to extend the principle, already applied to the Indian and provincial executives, to the district executives, Lord Hardinge's government were quick to see where it led. Speaking on behalf of the government, the Member for the Home Department reviewed the proposal as follows :

Well, Sir, as the Hon'ble Mover has said, he only wishes this Council to be advisory to *begin with*. This council of nine men, when we come to look to Mr. Gokhale's proposals, we find that so far from being advisory to begin with, they are very largely administrative councils, and that is the view which has been taken by many Hon'ble Members of this Council they want not advisory but administrative or executive councils. Well, Sir, I have said enough to show that Collectors and executive officers will not be rendered more efficient by a council of this kind ; but that if local matters are to be referred to anybody, it must be local bodies and that the hopes lie with them ; but in case this Council desire to pass this resolution in agreement with the Hon'ble Mr. Gokhale, I should like it to feel not only what this Collector's council might be *to begin with*, but what it might become to end with. I fear myself that the nine councillors intended by the Hon'ble Mr. Gokhale as nine muses to inspire the Collector, would end by becoming nine millstones round his neck. If that should come to pass, we might as well do away with the unfortunate Collector altogether. Now, Sir, the Hon'ble Mr. Gokhale has not repeated what he has said in his evidence before the Decentralization Commission, and it may perhaps interest you to know before you agree to his council of nine. Under his scheme you would already have succeeded in abolishing the post of Commissioner, and there would be no one left between the Local Government and the Collector.

If I have been able to convince Hon'ble Members here that the Collector would also go, I should very much like to know what the opinion of the Council will be. I hardly suppose that the Hon'ble Mover himself contemplates this result absolutely with equanimity.

Now, Sir, the Hon'ble Mr. Gokhale has not repeated what he has said in his evidence before the Decentralization Commission, and it may perhaps interest you to know before you agree to his council of nine. Under his scheme you would already have succeeded in abolishing the post of Commissioner, and there would be no one left between the Local Government and the Collector.

If I have been able to convince Hon'ble Members here that the Collector would also go, I should very much like to know what the opinion of the Council will be. I hardly suppose that the Hon'ble Mover himself contemplates this result absolutely with equanimity.

I do not think that the Council will do so either, and I am perfectly sure that any such idea as the elimination of the Collector or the emasculation of his power would be viewed with the utmost consternation and concern by the masses of the people, to whom the impartiality of the Collector, and, I may add, his independence, is the very sheet anchor of their trust in British administration. As far as Government is concerned, I can only say that if this proposal, as devised by the Hon'ble Mr. Gokhale, were carried out and carried to its logical conclusions, it would undermine the executive power of the Government, and it is quite impossible therefore that the Government of this country can contemplate for a moment its executive powers being undermined.

§ 2. The general teaching of experience needs to be studied to the full. But the real intrinsic nature of the problem before us has to be grasped, and a new solution devised to fit its peculiar conditions. We shall not solve it by tearing leaves wholesale out of the records of precedents. We must think for ourselves, and have the courage to add a new page to the volume of human experience. The root of the problem, I suggest, is to bring electorates, however small, into being ; to give them genuine responsibilities ; to enable them to trace the effect of the votes they give on their own lives and so to connect cause and effect ; to watch the results ; and to add responsibilities with a generous hand, as fast as the results justify the addition, at the same time increasing the electorates as rapidly as may be.

§ 3. It is in the light of this conception that I propose to examine the one expedient which I have so far seen proposed which does not proceed upon the principle of leaving the executives responsible to Parliament in England, while making them dependent for their powers on elective assemblies in India, unweighted by any responsibility for seeing that the government is carried on. The plan in question is to institute complete responsible government in one selected area and observe the results. Underlying this suggestion is, I feel, the fallacious assumption that communities being either fit or unfit for self-government, therefore statesmanship consists in discovering to which of two categories a given community belongs. Now India is of all countries the most diverse, not only in race, language, and religion, but also in the degree of advancement attained by its various parts. One test of one part would be little or no criterion of the others. Moreover, the institution of full responsible government in one province only would tend to make the others unmanageable. Men are sentient

I do not think that the Council will do so either, and I am perfectly sure that any such idea as the elimination of the Collector or the emasculation of his power would be viewed with the utmost consternation and concern by the masses of the people, to whom the impartiality of the Collector, and, I may add, his independence, is the very sheet anchor of their trust in British administration. As far as Government is concerned, I can only say that if this proposal, as devised by the Hon'ble Mr. Gokhale, were carried out and carried to its logical conclusions, it would undermine the executive power of the Government, and it is quite impossible therefore that the Government of this country can contemplate for a moment its executive powers being undermined.

The root of the problem, I suggest, is to bring electorates, however small, into being ; to give them genuine responsibilities ; to enable them to trace the effect of the votes they give on their own lives and so to connect cause and effect ; to watch the results ; and to add responsibilities with a generous hand, as fast as the results justify the addition, at the same time increasing the electorates as rapidly as may be.

§ 3. It is in the light of this conception that I propose to examine the one expedient which I have so far seen proposed which does not proceed upon the principle of leaving the executives responsible to Parliament in England, while making them dependent for their powers on elective assemblies in India, unweighted by any responsibility for seeing that the government is carried on. The plan in question is to institute complete responsible government in one selected area and observe the results. Underlying this suggestion is, I feel, the fallacious assumption that communities being either fit or unfit for self-government, therefore statesmanship consists in discovering to which of two categories a given community belongs. Now India is of all countries the most diverse, not only in race, language, and religion, but also in the degree of advancement attained by its various parts. One test of one part would be little or no criterion of the others. Moreover, the institution of full responsible government in one province only would tend to make the others unmanageable. Men are sentient

beings ; and you cannot import the methods of a physical laboratory into political research. The general unrest produced throughout the rest of India, which was asked to wait indefinitely, would react on the favoured province, and prejudice the results of the experiment there. If the first experiments on responsible government are to succeed, it must be in an India at peace in her own mind and throughout her coasts.

§ 4. This expedient, moreover, mistakes the whole character of the problem, as I see it, which is to train electorates throughout India by the exercise of real responsibilities proportioned to the strength of the electorate for the time being. The process of education should proceed simultaneously in all parts of British India, according to the pace at which each community is able to move. The example set by the more advanced communities will be simply invaluable, but only if the more backward communities are given the opportunity of emulating and imitating that example at once, so far as in them lies. They must be allowed to feel that the successful exercise of one power will quickly be followed by the addition of others.

§ 5. This particular proposal has been mooted by men who are just as firmly convinced as I am that responsible government is the only sound goal of policy, and are no less anxious to reach it. On several occasions, however, I have met people who honestly believe that the goal of self-government for India was a mirage, and have done their best to convert me to that view. Such people are fertile in negative advice. Having listened to the reasons against every suggested course, I have always made a point of asking them what positive suggestion they would offer, assuming that public opinion in England insists that something should be done. Pressed to this point, the advice of such men has usually been to initiate full responsible government in one province as an experiment. That, they believe, would convince public opinion at home of the truth of their own conviction that responsible government is a goal of policy impossible for India. I agree that the results of so drastic an experiment would be likely to fail. But the failure would lead to a wholly misleading conclusion. You might just as well set out to test the potential vitality of a man long bed-ridden by sending him to march twenty miles the first day. The proper course is to develop his strength by a little exercise gradually increased as the patient can bear it. That I submit can only be done by

beings ; and you cannot import the methods of a physical laboratory into political research. The general unrest produced throughout the rest of India, which was asked to wait indefinitely, would react on the favoured province, and prejudice the results of the experiment there. If the first experiments on responsible government are to succeed, it must be in an India at peace in her own mind and throughout her coasts.

§ 4. This expedient, moreover, mistakes the whole character of the problem, as I see it, which is to train electorates throughout India by the exercise of real responsibilities proportioned to the strength of the electorate for the time being. The process of education should proceed simultaneously in all parts of British India, according to the pace at which each community is able to move. The example set by the more advanced communities will be simply invaluable, but only if the more backward communities are given the opportunity of emulating and imitating that example at once, so far as in them lies. § 5. This particular proposal has been mooted by men who are just as firmly convinced as I am that responsible government is the only sound goal of policy, and are no less anxious to reach it. On several occasions, however, I have met people who honestly believe that the goal of self-government for India was a mirage, and have done their best to convert me to that view. Such people are fertile in negative advice. Having listened to the reasons against every suggested course, I have always made a point of asking them what positive suggestion they would offer, assuming that public opinion in England insists that something should be done. Pressed to this point, the advice of such men has usually been to initiate full responsible government in one province as an experiment. That, they believe, would convince public opinion at home of the truth of their own conviction that responsible government is a goal of policy impossible for India. I agree that the results of so drastic an experiment would be likely to fail. But the failure would lead to a wholly misleading conclusion. You might just as well set out to test the potential vitality of a man long bed-ridden by sending him to march twenty miles the first day. The proper course is to develop his strength by a little exercise gradually increased as the patient can bear it. That I submit can only be done by

transferring some genuine functions to Indian executives responsible to electorates, and by increasing the burden as each of them shows its capacity to carry more.

LETTER VII

THE GOAL

§ 1. THE principle of specific delegation is highly elastic. It admits of infinite diversity of application. To begin with, it involves a reconsideration of the map. But that is a virtue rather than a defect ; for, if anything is certain, it is this, that a map of India designed from first to last to suit the needs of a highly bureaucratic government, with its mainspring in England, is not suited to a country governed by executives responsible to electorates in India itself : and that is the goal to which we are now pledged. Every step we now take, and specially the first, must look to a time when all purely Indian questions will be decided in India by Indian electorates. We are bound to test all our proposals by the question how they will lead to that goal, and, when it is reached, how far they will harmonize with its conditions. The very object of stating a goal is to avoid makeshifts, which come to stay and hang about the neck of the future like millstones. It is capacity to work with an eye on the distant goal, which distinguishes the statesman from mere politicians who live from hand to mouth.

§ 2. Now what are purely Indian questions ? To answer that question we must ask another—what is India ? The goal of responsible government implies an ideal inseparable from its attainment—a self-governing nation or nations, a Dominion or Dominions within the limits of the British Commonwealth. Now is India to be the future home of one nation, or a group of nations ; of one Dominion, or of a group of Dominions ? To bring matters down to a fine point, is Europe the model upon which India is to develop, or rather is she to seek her example in the territories covered by the United States of America ? There are two schools of thought on this subject, and it is essential that the issues between them should be thought out in time. For everything which follows will depend upon which of those two conceptions are chosen.

§ 3. The great diversity of India in respect of race, language,

transferring some genuine functions to Indian executives responsible to electorates, and by increasing the burden as each of them shows its capacity to carry more.

LETTER VII

THE GOAL

§ 1. THE principle of specific delegation is highly elastic. It admits of infinite diversity of application. To begin with, it involves a reconsideration of the map. But that is a virtue rather than a defect ; for, if anything is certain, it is this, that a map of India designed from first to last to suit the needs of a highly bureaucratic government, with its mainspring in England, is not suited to a country governed by executives responsible to electorates in India itself : and that is the goal to which we are now pledged. Every step we now take, and specially the first, must look to a time when all purely Indian questions will be decided in India by Indian electorates. We are bound to test all our proposals by the question how they will lead to that goal, and, when it is reached, how far they will harmonize with its conditions. The very object of stating a goal is to avoid makeshifts, which come to stay and hang about the neck of the future like millstones. It is capacity to work with an eye on the distant goal, which distinguishes the statesman from mere politicians who live from hand to mouth.

§ 2. Now what are purely Indian questions ? To answer that question we must ask another—what is India ? The goal of responsible government implies an ideal inseparable from its attainment—a self-governing nation or nations, a Dominion or Dominions within the limits of the British Commonwealth. Now is India to be the future home of one nation, or a group of nations ; of one Dominion, or of a group of Dominions ? To bring matters down to a fine point, is Europe the model upon which India is to develop, or rather is she to seek her example in the territories covered by the United States of America ? There are two schools of thought on this subject, and it is essential that the issues between them should be thought out in time. For everything which follows will depend upon which of those two conceptions are chosen.

§ 3. The great diversity of India in respect of race, language,

and religion, points to Europe rather than the United States as the natural model to be followed. If so, our aim will then be to mould Bengal, Madras, Bombay, the Punjab, the United Provinces, and the other existing provinces of India into nations, each with a domestic government responsible to itself. But if we are really keeping the goal of responsible government in our minds, this conception breaks down at the outset. We are bound to look at future needs, as well as at present conditions. These units, large as they are, have common interests which are strictly Indian—railways, tariffs, social law, and commercial law—which cannot be controlled by these units acting apart. The recent experience of South Africa, and the older experience of the other Dominions, and of the United States, proves that a number of self-governing units cannot control these interests, without establishing a central government responsible to all the communities alike. Unless we look forward to an Indian government responsible to the whole people of India for the control of interests too large for any of her provinces, those interests will have to be controlled by the Imperial Government from outside. That is the view expressed in Lord Islington's recent lecture at Oxford, but it is utterly incompatible with the Pronouncement of August 20. If Indian tariffs are always to be controlled by the Imperial Government, then matters which are strictly Indian will be controlled by an authority outside India, and that is the negation of responsible government. The nations of Europe, with all their diversity, have such interests in common, interests which cannot be controlled, so long as they remain divided in separate camps, with no common authority and no common law. Hence the spectre of war, which the United States has long banished from her shores, haunts, and will long continue to haunt, Europe. Unless India is doomed to the fate of Europe, her common interests must be controlled. We are pledged to the goal of transferring that control to India herself. Responsible government means no less, and it is in realizing that control, in becoming the mistress of her own house and in all its chambers, that India will transcend the diversity of her races, religions, and tongues, and attain in the end to the consciousness of nationalism and to the verity of nationhood. The recent declaration leaves us no choice. It is not Europe which we can take as the model for India, but a super-nation, conceived on the scale of the United States of America, as that nation

and religion, points to Europe rather than the United States as the natural model to be followed. If so, our aim will then be to mould Bengal, Madras, Bombay, the Punjab, the United Provinces, and the other existing provinces of India into nations, each with a domestic government responsible to itself. But if we are really keeping the goal of responsible government in our minds, this conception breaks down at the outset. We are bound to look at future needs, as well as at present conditions. These units, large as they are, have common interests which are strictly Indian—railways, tariffs, social law, and commercial law—which cannot be controlled by these units acting apart. The recent experience of South Africa, and the older experience of the other Dominions, and of the United States, proves that a number of self-governing units cannot control these interests, without establishing a central government responsible to all the communities alike. Unless we look forward to an Indian government responsible to the whole people of India for the control of interests too large for any of her provinces, those interests will have to be controlled by the Imperial Government from outside. That is the view expressed in Lord Islington's recent lecture at Oxford, but it is utterly incompatible with the Pronouncement of August 20. If Indian tariffs are always to be controlled by the Imperial Government, then matters which are strictly Indian will be controlled by an authority outside India, and that is the negation of responsible government. The nations of Europe, with all their diversity, have such interests in common, interests which cannot be controlled, so long as they remain divided in separate camps, with no common authority and no common law. Hence the spectre of war, which the United States has long banished from her shores, haunts, and will long continue to haunt, Europe. Unless India is doomed to the fate of Europe, her common interests must be controlled. We are pledged to the goal of transferring that control to India herself. Responsible government means no less, and it is in realizing that control, in becoming the mistress of her own house and in all its chambers, that India will transcend the diversity of her races, religions, and tongues, and attain in the end to the consciousness of nationalism and to the verity of nationhood. The recent declaration leaves us no choice. It is not Europe which we can take as the model for India, but a super-nation, conceived on the scale of the United States of America, as that nation

would have been had it remained within the precincts of the British Commonwealth.

§ 4. This conception, which we cannot evade without being false to our pledges, brings with it the motive, in the absence of which all schemes of self-government, all projects of making a nation in India, will fail. The ideal of an Indian nation, the appeal of Indian patriotism, is the choice which educated Indians themselves will make. The appeal of a Bengali nation, or of a Punjabi nation, is not of itself large enough to evoke the spirit of devotion upon which alone self-government can rest. It was love of Japan which moved her people to seek from all the world the knowledge which might raise their country to the plane achieved by other great nations of the world. This devotion to a great country, existing or to be, is the spiritual force without which education degenerates into mere instruction. If we do but think what the task of an English schoolmaster would be, could he never appeal to a sense of English nationalism, we shall realize this truth. As the name of England stirs ourselves, so must the name of India be brought to stir the children of this country. Personally I see in India little trace of spontaneous devotion to the British Commonwealth, or of Imperial patriotism as I conceive it—the kind of sentiment which makes Australians and Canadians feel they would die sooner than see this Commonwealth perish, or their own nation cease to be part of it. Roots from which this greater love has sprung have yet to be planted in India, and we must not look to gather that rich harvest until the seeds of freedom have long flourished in her soil. Some gratitude exists in the minds of those who realize the benefits of British rule. Much loyalty there is on the part of princes and nobles to the person of the King. The legend of that King ruling a quarter of mankind has its hold on the oriental imagination of the dumb millions of the Indian mofussil. But those strong though delicate ties of mutual esteem and affection, by which the citizens of a true commonwealth are knit, have yet to be developed. They will spring in time from the new policy. Their growth will be the triumph of a later age. For the present I believe there is nothing to be gained by artificial forcing of an Imperial patriotism, until a true Indian patriotism has become conscious in the life and soul of this people. Cultivate that; give it scope for expression, and above all a field for exercise; and one day the greater love of the greater Commonwealth will be found

Abstract

[illegible]

would have been had it remained within the precincts of the British Commonwealth.

§ 4. This conception, which we cannot evade without being false to our pledges, brings with it the motive, in the absence of which all schemes of self-government, all projects of making a nation in India, will fail. The ideal of an Indian nation, the appeal of Indian patriotism, is the choice which educated Indians themselves will make. The appeal of a Bengali nation, or of a Punjabi nation, is not of itself large enough to evoke the spirit of devotion upon which alone self-government can rest. It was love of Japan which moved her people to seek from all the world the knowledge which might raise their country to the plane achieved by other great nations of the world. This devotion to a great country, existing or to be, is the spiritual force without which education degenerates into mere instruction. If we do but think what the task of an English schoolmaster would be, could he never appeal to a sense of English nationalism, we shall realize this truth. As the name of England stirs ourselves, so must the name of India be brought to stir the children of this country. Personally I see in India little trace of spontaneous devotion to the British Commonwealth, or of Imperial patriotism as I conceive it—the kind of sentiment which makes Australians and Canadians feel they would die sooner than see this Commonwealth perish, or their own nation cease to be part of it. Roots from which this greater love has sprung have yet to be planted in India, and we must not look to gather that rich harvest until the seeds of freedom have long flourished in her soil. Some gratitude exists in the minds of those who realize the benefits of British rule. Much loyalty there is on the part of princes and nobles to the person of the King. The legend of that King ruling a quarter of mankind has its hold on the oriental imagination of the dumb millions of the Indian mofussil. But those strong though delicate ties of mutual esteem and affection, by which the citizens of a true commonwealth are knit, have yet to be developed. They will spring in time from the new policy. Their growth will be the triumph of a later age. For the present I believe there is nothing to be gained by artificial forcing of an Imperial patriotism, until a true Indian patriotism has become conscious in the life and soul of this people. Cultivate that; give it scope for expression, and above all a field for exercise; and one day the greater love of the greater Commonwealth will be found

to have come without observation. With educated Indians this may be sooner than we now dream, if they be but given their place in the supreme councils of this world Commonwealth, to which they are entitled, and from which, indeed, they cannot be spared.

LETTER VIII

THE MAP OF INDIA

§ 1. It is in assuming the control of Indian affairs that an Indian patriotism and its after-fruits will develop. And no vision smaller than India will give to her people the internal driving force they need. Let us face the ideal of a united India in all its magnitude and in all its diversity. Let us face the difficulties with which that magnitude and diversity confront us, and endeavour to reduce them at the outset so far as we can. What place, for instance, has Burma in the vision of a future Indian nation? Geographically she is as far removed from India as Rangoon is from Calcutta. In race, language, and religion, her people have scarcely a point in common with those of India. The attempt to incorporate Burma in the fabric of Indian administration is the consequence of a system, the antithesis of popular government, which groups different communities without reference to anything but immediate administrative convenience. Burma was incorporated in India when our policy was dominated by the conception of a vast Eastern dependency. That conception is now abandoned, and India and Burma ought to be divorced. The people of neither country desire the alliance. The Burmese member has no proper place in the Indian legislature. If we really intend to create a united self-governing India, Burma should be emancipated from the Government of India, and should either be placed under the personal rule of the Viceroy, or its Government should be rendered answerable to the Secretary of State for India direct. It will be more contrary to nature to force Burma into the fabric of an Indian nationhood, than to incorporate Ireland in Great Britain, or Finland in Russia. To this important extent the problem can be simplified at once.

§ 2. India, we have said, must come to control affairs which are purely Indian. She is, however, to remain an integral part of the British Commonwealth. Her foreign affairs

the information science community. The article is a review of the literature on the topic of information science and its relationship to other disciplines. The author discusses the history of information science and its evolution over time. He also discusses the current state of the field and the challenges it faces. The article is written in a clear and concise style, making it accessible to a wide range of readers.

INFORMATION SCIENCE

INFORMATION SCIENCE AND THE FUTURE

The future of information science is a topic that has been discussed for many years. In this article, the author explores the challenges and opportunities that lie ahead for the field. He discusses the impact of new technologies on information science and the need for interdisciplinary research. The author also discusses the importance of education and training in the field. The article is written in a clear and concise style, making it accessible to a wide range of readers. The author's arguments are well-supported by evidence and his writing is engaging and informative. This article is a valuable contribution to the literature on information science and its future.

to have come without observation. With educated Indians this may be sooner than we now dream, if they be but given their place in the supreme councils of this world Commonwealth, to which they are entitled, and from which, indeed, they cannot be spared.

LETTER VIII

THE MAP OF INDIA

§ 1. It is in assuming the control of Indian affairs that an Indian patriotism and its after-fruits will develop. And no vision smaller than India will give to her people the internal driving force they need. Let us face the ideal of a united India in all its magnitude and in all its diversity. Let us face the difficulties with which that magnitude and diversity confront us, and endeavour to reduce them at the outset so far as we can. What place, for instance, has Burma in the vision of a future Indian nation? Geographically she is as far removed from India as Rangoon is from Calcutta. In race, language, and religion, her people have scarcely a point in common with those of India. The attempt to incorporate Burma in the fabric of Indian administration is the consequence of a system, the antithesis of popular government, which groups different communities without reference to anything but immediate administrative convenience. Burma was incorporated in India when our policy was dominated by the conception of a vast Eastern dependency. That conception is now abandoned, and India and Burma ought to be divorced. The people of neither country desire the alliance. The Burmese member has no proper place in the Indian legislature. If we really intend to create a united self-governing India, Burma should be emancipated from the Government of India, and should either be placed under the personal rule of the Viceroy, or its Government should be rendered answerable to the Secretary of State for India direct. It will be more contrary to nature to force Burma into the fabric of an Indian nationhood, than to incorporate Ireland in Great Britain, or Finland in Russia. To this important extent the problem can be simplified at once.

§ 2. India, we have said, must come to control affairs which are purely Indian. She is, however, to remain an integral part of the British Commonwealth. Her foreign affairs

are those of the whole Commonwealth. She can never therefore control them apart. They form an integral part of the foreign affairs of the whole Commonwealth, in the control of which she must come to share. The Indian frontier is a large item in foreign affairs. Live wires run from it throughout the whole of Asia and Europe, the mismanagement of which at this end may involve the whole Commonwealth in war and set the whole of the world on fire. Here is the one critical frontier in any part of the British Dominions, and, if India were now inhabited by a people already as fitted and practised in self-government as those of England herself, it would not be possible, so long as they remain part of the British Commonwealth, to place the Indian frontier under the control of a government responsible only to the people of India. That frontier must remain under the sole, unfettered control of the Imperial Government charged with the conduct of foreign affairs. This principle ought to be enunciated and implemented now, and effect can only be given to it by reserving from the outset a strip, however narrow, from sea to sea, which would isolate a self-governing India from any contact with foreign frontiers. The proposal means no more than completing the policy inaugurated by Lord Curzon when he separated the North-West Frontier Province from the Punjab. That province has simply to be extended down the right bank of the Indus to the Arabian Sea, and eastwards along the foothills of the mountain barrier, taking a narrow strip not more than a few miles wide along the frontiers of Nepal, to the point where the boundaries of India and Burma meet on the confines of Tibet. The self-governing India of the future would then be as well isolated from complications with foreign Powers as Australia herself. The future destination of the frontier province would be signalized by removing it to the personal control of the Viceroy from the jurisdiction of the Governor-General in Council, the members of which are destined to become hereafter the ministers of a cabinet responsible to an Indian parliament. This arrangement would be closely analogous to that under which the Governor-General of South Africa is, in that capacity, the legal head of the Union Government, while, as High Commissioner, he is responsible to the Secretary of State for the Colonies, as *de facto* ruler of all British South African territories not included in the Union.

§ 3. If once it were understood that India is to be

are those of the whole Commonwealth. She can never therefore control them apart. They form an integral part of the foreign affairs of the whole Commonwealth, in the control of which she must come to share. The Indian frontier is a large item in foreign affairs. Live wires run from it throughout the whole of Asia and Europe, the mismanagement of which at this end may involve the whole Commonwealth in war and set the whole of the world on fire. Here is the one critical frontier in any part of the British Dominions, and, if India were now inhabited by a people already as fitted and practised in self-government as those of England herself, it would not be possible, so long as they remain part of the British Commonwealth, to place the Indian frontier under the control of a government responsible only to the people of India. That frontier must remain under the sole, unfettered control of the Imperial Government charged with the conduct of foreign affairs. This principle ought to be enunciated and implemented now, and effect can only be given to it by reserving from the outset a strip, however narrow, from sea to sea, which would isolate a self-governing India from any contact with foreign frontiers. The proposal means no more than completing the policy inaugurated by Lord Curzon when he separated the North-West Frontier Province from the Punjab. That province has simply to be extended down the right bank of the Indus to the Arabian Sea, and eastwards along the foothills of the mountain barrier, taking a narrow strip not more than a few miles wide along the frontiers of Nepal, to the point where the boundaries of India and Burma meet on the confines of Tibet. The self-governing India of the future would then be as well isolated from complications with foreign Powers as Australia herself. The future destination of the frontier province would be signalized by removing it to the personal control of the Viceroy from the jurisdiction of the Governor-General in Council, the members of which are destined to become hereafter the ministers of a cabinet responsible to an Indian parliament. This arrangement would be closely analogous to that under which the Governor-General of South Africa is, in that capacity, the legal head of the Union Government, while, as High Commissioner, he is responsible to the Secretary of State for the Colonies, as *de facto* ruler of all British South African territories not included in the Union.

§ 3. If once it were understood that India is to be

separated from foreign complications by a province destined to remain subject to the Imperial Government as absolutely and as finally as Malta or Gibraltar, the whole project of developing India as a self-governing Dominion will begin to assume a different aspect. A large factor in the alarm with which the cautious Englishman views that prospect, arises from the half-conscious dread in the back of his mind as to what would happen to the peace of the whole Commonwealth, if this, its one critical frontier, were relegated to the charge of a Dominion ministry. Such a thing would be utterly wrong in principle. Imperial control of the frontier ought to be established from the outset, and, when once that has been definitely settled, the Imperial Government can embark on steps for establishing India on the same footing as the self-governing Dominions with a lighter heart and a clearer mind.

§ 4. The territory, then, of which I am thinking as the home of a future self-governing Dominion is the Indian Peninsula bounded by the Indus, the line where the plains meet the Himalayan range and the line which divides Burma from Assam and Bengal. It is to this territory that we should consider how we are going to apply the conception of a super-nation organized on the lines of the United States of America, as it would have been had it developed as a self-governing Dominion of the British Commonwealth. Let us think how this conception affects the internal structure of the map. American publicists of the eighteenth century were accustomed to speak of the thirteen States as 'these nations'. This application of the word 'nation' to any State of the American Union would be quite impossible to-day. An American thinks of the whole Republic as his nation, and the State has now been reduced to its proper level in his mind—to the level of a province. But the province is an essential organ of that vast polity. It was far too great ever to be ruled on the lines of self-government by one administration from one centre. A nation so vast could only govern itself, provided that it was cut up into a number of provinces, each managing its own affairs for itself. These provinces had first to be got into working order on self-governing lines, with areas appropriate thereto. Then, and then only, could they be brought into proper relation to each other and to a central national government charged with the conduct of all functions too large for the several provinces to control. Amongst the problems which distract Russia at this moment are those of finding areas

separated from foreign complications by a province destined to remain subject to the Imperial Government as absolutely and as finally as Malta or Gibraltar, the whole project of developing India as a self-governing Dominion will begin to assume a different aspect. A large factor in the alarm with which the cautious Englishman views that prospect, arises from the half-conscious dread in the back of his mind as to what would happen to the peace of the whole Commonwealth, if this, its one critical frontier, were relegated to the charge of a Dominion ministry. Such a thing would be utterly wrong in principle. Imperial control of the frontier ought to be established from the outset, and, when once that has been definitely settled, the Imperial Government can embark on steps for establishing India on the same footing as the self-governing Dominions with a lighter heart and a clearer mind.

§ 4. The territory, then, of which I am thinking as the home of a future self-governing Dominion is the Indian Peninsula bounded by the Indus, the line where the plains meet the Himalayan range and the line which divides Burma from Assam and Bengal. It is to this territory that we should consider how we are going to apply the conception of a super-nation organized on the lines of the United States of America, as it would have been had it developed as a self-governing Dominion of the British Commonwealth. Let us think how this conception affects the internal structure of the map. American publicists of the eighteenth century were accustomed to speak of the thirteen States as 'these nations'. This application of the word 'nation' to any State of the American Union would be quite impossible to-day. An American thinks of the whole Republic as his nation, and the State has now been reduced to its proper level in his mind—to the level of a province. But the province is an essential organ of that vast polity. It was far too great ever to be ruled on the lines of self-government by one administration from one centre. A nation so vast could only govern itself, provided that it was cut up into a number of provinces, each managing its own affairs for itself. These provinces had first to be got into working order on self-governing lines, with areas appropriate thereto. Then, and then only, could they be brought into proper relation to each other and to a central national government charged with the conduct of all functions too large for the several provinces to control. Amongst the problems which distract Russia at this moment are those of finding areas

appropriate to provincial self-government, of equipping them with electoral governments of their own, of reconstructing the national government on an electoral basis, of giving to each authority its appropriate functions and revenues, and of driving all these coaches through the gate of a revolution side by side. In India, happily, there is no need to court disaster by trying to do all these difficult things together in one operation. With all the experience before us of America and the self-governing Dominions her map can be readjusted on lines compatible with the popular control of her institutions.

§ 5. In guiding India from paternal to popular government one vital truth has always to be kept in mind. The areas and administrative mechanism developed by a system of paternal government, are utterly different from those developed by a system of popular government. When introducing responsible government in a great country which has never had it before, you must be prepared to revise your areas, and to re-construct your administrative system. As every practical man knows, popular prejudice is always a factor which has to be considered in political arrangements. There is in human nature an element of conservatism which makes a great number of men cling to any arrangement to which they are accustomed. To a detached observer, one of the most pathetic features in the Indian situation is the tenacity with which certain elements of its people, and those the most vocal, cling to features in the system organized by us foreigners, which are in fact the greatest obstacles to popular government. One is our educational system ; another is the Permanent Settlement ; a third the vast satrapies into which our system has divided India. No statesman will disregard the prejudices of a highly conservative people in favour of the existing order. On the other hand, no ruler will be worthy of the name of statesman who will not help Indians to escape from our arrangements, and from their own prejudice in favour of them, when to do so is necessary for the attainment of popular government in fact as well as in name. The tendency to act as though statesmanship consisted merely in listening to those living men who can make their voices heard is the curse of modern liberalism. It has been the undoing of Ireland, and may easily be that of India. Even where a people can speak with one united voice, their verdict may be fatal to after-generations whose voice cannot as yet be heard. The duty of statesmen

Abstract

The purpose of this study was to examine the effects of a 6-week training program on the physical fitness and health-related quality of life (HRQL) of sedentary middle-aged women. The subjects were randomly assigned to either a control group or an exercise group. The exercise group performed a supervised aerobic exercise program three times per week for six weeks. The control group did not participate in any structured exercise program. Physical fitness parameters measured included heart rate, blood pressure, resting energy expenditure, and body composition. HRQL was assessed using the SF-36 questionnaire. Results showed that the exercise group had significantly higher levels of physical fitness and improved HRQL compared to the control group after six weeks of training.

Abstract

The purpose of this study was to determine whether there were differences in the prevalence of self-reported depression between men and women who had been exposed to violence during childhood and adulthood. Data from the National Longitudinal Study of Adolescent Health (*N = 9,800*) were used to examine the association between exposure to violence and self-reported depression among adolescents. The results showed that exposure to violence during childhood and adulthood was associated with higher rates of self-reported depression. The association between exposure to violence and self-reported depression was stronger for women than for men.

appropriate to provincial self-government, of equipping them with electoral governments of their own, of reconstructing the national government on an electoral basis, of giving to each authority its appropriate functions and revenues, and of driving all these coaches through the gate of a revolution side by side. In India, happily, there is no need to court disaster by trying to do all these difficult things together in one operation. With all the experience before us of America and the self-governing Dominions her map can be readjusted on lines compatible with the popular control of her institutions.

§ 5. In guiding India from paternal to popular government one vital truth has always to be kept in mind. The areas and administrative mechanism developed by a system of paternal government, are utterly different from those developed by a system of popular government. When introducing responsible government in a great country which has never had it before, you must be prepared to revise your areas, and to re-construct your administrative system. As every practical man knows, popular prejudice is always a factor which has to be considered in political arrangements. There is in human nature an element of conservatism which makes a great number of men cling to any arrangement to which they are accustomed. To a detached observer, one of the most pathetic features in the Indian situation is the tenacity with which certain elements of its people, and those the most vocal, cling to features in the system organized by us foreigners, which are in fact the greatest obstacles to popular government. One is our educational system; another is the Permanent Settlement; a third the vast satrapies into which our system has divided India. No statesman will disregard the prejudices of a highly conservative people in favour of the existing order. On the other hand, no ruler will be worthy of the name of statesman who will not help Indians to escape from our arrangements, and from their own prejudice in favour of them, when to do so is necessary for the attainment of popular government in fact as well as in name. The tendency to act as though statesmanship consisted merely in listening to those living men who can make their voices heard is the curse of modern liberalism. It has been the undoing of Ireland, and may easily be that of India. Even where a people can speak with one united voice, their verdict may be fatal to after-generations whose voice cannot as yet be heard. The duty of statesmen

is to think out the plan which is right in itself, to state that plan clearly and boldly, and then guide the community towards it as closely as popular prejudice will allow, not failing to appeal to their innate sense of trusteeship for those who come after them.

§ 6. I propose, therefore, to begin by considering what conditions, apart from popular prejudice, are needed to realize most quickly the scheme of responsible government for India outlined in the pronouncement of August 20. I shall then go on to suggest in what manner the people of India can best be helped to approximate to those conditions for themselves.

§ 7. Now, looking at any great country, it is easy to see that there are certain areas correlative to certain organs of government. At the bottom you find the village, the town, and the district, so called in India, which corresponds to the English and American county or the French department. These areas are the field of what, in technical language, is called *local government*. In a later page we shall see how sharply the sphere of local government is to be distinguished from that of political government, which belongs to provincial and national authorities. The one deals only with administrative detail, the other includes the settlement of wide political issues.

§ 8. In all great communities the political field is, or ought to be, divided between one central government and a number of provincial governments. There are various reasons for this, which can best be explained by keeping in mind the United States. Congress at Washington could not pass all the measures required by the different parts of that vast and varied community. It would break down for want of time, and its measures would not be sufficiently adapted to the needs of the various local communities. We cannot imagine one law and system of education for the whole of America. And, if we could, its administration from one centre would be too rigid. Areas so far removed as California and New York need different systems, adapted to their local conditions and administered in response to the feelings of each community. Apart from this, an educational system, administered from Washington for all America, would be too vast for any one authority to control.

§ 9. These reasons for provincial governments and areas are sufficient; but they could be multiplied indefinitely. It is for want of such institutions that social reform is paralysed in the British Isles, France, and Italy. One central govern-

is to think out the plan which is right in itself, to state that plan clearly and boldly, and then guide the community towards it as closely as popular prejudice will allow, not failing to appeal to their innate sense of trusteeship for those who come after them.

Apart from this, an educational system, administered from Washington for all America, would be too vast for any one authority to control.

§ 9. These reasons for provincial governments and areas are sufficient; but they could be multiplied indefinitely. It is for want of such institutions that social reform is paralysed in the British Isles, France, and Italy. One central govern-

1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 26

...and the fact that the *Journal of Management Studies* is a leading journal in the field of management studies, it is a great pleasure to have this special issue.

ment is unable to cope with the needs of thirty or forty millions. Effective social reform will never be attained, unless or until they develop self-governing provinces commensurate with those of Switzerland, the Dominions, or the United States. The first problem before India is to get areas in which provincial self-government can be made effective.

§ 10. At present the major self-governing provinces of India are as large as, or larger than, the three nations referred to above. How comes it that India is divided into units so vast ?

Some light will be thrown on the question by a glance at the map of North America as it existed in the middle of the eighteenth century. Its soil was then divided between three Great Empires, which all centred in Europe. Spain claimed to administer, as one huge province, all the territories now covered by Mexico, California, Arizona, New Mexico, Texas, Alabama, and Florida. Similarly France claimed a vast triangular territory, of which the north-eastern angle was opposite Newfoundland, the north-western angle near Winnipeg, and the southern angle at the mouth of the Mississippi in the Gulf of Mexico. England claimed a much smaller area, the coast strip extending from the boundary which now divides New Brunswick and Maine to the northern boundary of Florida.

§ 11. The vast territories of Spain and France were each governed as one great province from Mexico City and Quebec respectively. The much smaller British strip was already, by the middle of the eighteenth century, partitioned into no less than thirteen self-governing colonies. This partition was the natural and necessary result of self-government. Now that the Spanish and French territories have all been brought under electoral government, they have all had to be subdivided in the same way. The lesson, which can be freely illustrated from Asia, is that centralized autocracies develop satrapies which are far too large for the purposes of provincial self-government. The old Chinese provinces are on far too large a scale for this purpose. Aggregates so vast include communities so various as to need different laws and institutions to suit their peculiarities. Provincial self-government has been evolved to meet this need. Quebec and Ontario were once placed under a single government, which suited them ill ; for one was Catholic, the other Protestant ; one French, the other British. Roman law prevailed in one province, and English common

Quebec and Ontario were once placed under a single government, which suited them ill ; for one was Catholic, the other Protestant ; one French, the other British. Roman law prevailed in one province, and English common

1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 26

Figure 1. The effect of the number of trials on the mean number of correct responses. The number of correct responses increased with the number of trials. The error bars represent the standard error of the mean.

law in the other. The creation of a federal government enabled them to develop as sub-nationalities of one great nation, like the English and Scots, and yet to be separated as self-governing provinces able to develop their respective institutions in harmony with their different conditions.

§ 12. In Australia there were no such social, religious, and legal distinctions. The eastern coast-belt was first organized as one Province of New South Wales, the whole of which was subject to the jurisdiction of the governor at Sydney. But the moment popular institutions were introduced the settlers in the territories now known as Victoria and Queensland found themselves out in the cold, as compared with the central districts adjacent to Sydney. The community was too large for effective control under popular institutions. The result was that the electorates of Victoria and Queensland were both detached, and placed under separate provincial governments of their own.

§ 13. If the areas of provincial self-government are too large, an artificial and irksome unity is imposed upon the too widely different elements embraced, which presently demand to be sub-divided into smaller self-governing areas. Provinces, moreover, planned on the scale of nations tend to fall apart as separate national units. And besides all this, self-government, always a difficult business in its beginnings, is much more difficult, if first applied to a community so great that the various representatives know little of parts other than their own. To attempt self-government on too wide a scale is to prejudice its success at the outset.

§ 14. All this has an obvious bearing on the existing provinces of India. They are for the most part the artificial creations of a paternal and highly centralized Government which has its mainspring in England. They were designed as the satrapies of a vast oriental dependency. The United Provinces, for instance, contains 48,000,000, and is larger than any European State but the Russian and German Empires. It contains a large variety of languages, races, and levels of society. To attempt the first essay in responsible government, by applying it to so vast and varied an aggregate, is to prejudice the whole experiment. It is also to court failure in the last stages of this great project of creating a united and self-governing India. These vast satrapies, conceived on the scale of considerable nations, will learn, under the influence of electoral government, to think as such, and so tend to fall apart, like the overgrown

the first of these is the fact that the majority of the specimens are from the same locality, and the second is the fact that the majority of the specimens are from the same individual. The third is the fact that the majority of the specimens are from the same sex, and the fourth is the fact that the majority of the specimens are from the same age group.

provinces of China. If India is to be taken as the true national unit, as it must be, it is of vital importance to consider now what the proper provincial units are to be out of which the whole national fabric can be built. The moment you begin to establish electoral governments, the boundaries of their jurisdictions, lightly sketched by the pencils of officials and diplomats, begin to bite into the political map like acids. The boundaries of artificial areas like those of Roumania, Bulgaria, and Serbia, carved out of the Turkish Empire, have within a few decades become lines over which their respective inhabitants have fought and bled. The internal peace of India generations hence will depend upon the wisdom and foresight with which the areas of provincial self-government are planned in the initial stages of the new departure.

§ 15. Once again we may refer for guidance in solving this problem to the example of the United States of America. That Republic is divided into forty-eight States, with an average population of 2,000,000 souls. Of these the most closely settled is New York, with a population of 10,000,000. Thus, if we take the largest State of the United States of America as our standard, British India, with its population of 240,000,000, might appropriately be divided into some twenty-four larger and smaller States. The term 'States' was suggested to me as having two merits. In the first place it helps to suggest the model of the United States, and to keep it in mind. In the second place it gives a description nicely parallel to that of the Native States which might, I suggest, be conveniently described as 'Principalities'. This change of title will enable us to adopt the American term State in describing the provincial areas, which, as I think, India must have in a federal system based upon popular government. And in this connexion let me add that the division of India into some twenty-four States would give areas far more comparable to the major Principalities, the largest of which, Hyderabad, contains 13,000,000 inhabitants. It is natural to suppose that the Princes of India will come to play a part in the life of the great nation to be called into being. If they follow the example set by several of the leading Princes, who have laid the foundations of a representative system, they will develop in the direction of constitutional monarchies, in sympathy with movements inaugurated in British India. The Princes themselves should be gathered in the Upper Chamber of a great Indian legislature, so that the Indian

If they follow the example set by several of the leading Princes, who have laid the foundations of a representative system, they will develop in the direction of constitutional monarchies, in sympathy with movements inaugurated in British India. The Princes themselves should be gathered in the Upper Chamber of a great Indian legislature, so that the Indian

nation of the future will not lack the leadership for which it will naturally look to its hereditary statesmen.

§ 16. In suggesting the most populous State of the American Union, with its population of 10,000,000, as the standard to be used for States in India, no suggestion is made that these States should be constituted on any mechanical principle. The defect of the present areas is that they are too mechanical. The Province of Bihar and Orissa, for instance, combines communities with an almost cynical disregard of the differences between them. The plan suggested will remedy these unnatural unions. This particular province would fall naturally into three Provincial States—Bihar, with its population of 24,000,000, and Orissa and Chota Nagpur, with 5,000,000 apiece. But Orissa itself ought to be increased by the inclusion of those people of the same language and race who inhabit the northern extremity of Madras and the Central Province. The disparity in size between these areas is no greater than that which exists in the United States, and in all the other federal Unions. Bihar is, of course, a dangerously large unit upon which to begin an experiment in provincial self-government, and might have to be subdivided, as Virginia has been. The first consideration is to get communities which, as contrasted with those of the British Isles, France, and Italy, are not too large for effective self-government on really provincial lines. Where possible, historic areas like Sind should be taken. But unity of language, race, and religion are also important factors, and language is the most important of all. The greatest obstacle to a real extension of popular government in India is the practice of conducting public business in the English tongue. By all means let English occupy the same position as Hindustani has in Northern India since the time of the Mughal Empire. In English lies the hope of national unity and of knowledge from the outside world. Let the public records be kept in English; extend knowledge of that language in every possible direction. But if all discussion of public affairs is conducted in English, then public life is going to be confined for many generations to come to a narrowly restricted class. How can electorates ever be brought to grasp the questions submitted to their judgement, if all public discussion is to be conducted in a foreign tongue? The use of the vernaculars in politics is essential if India is to advance towards responsible government at any but the slowest pace. The areas of provincial self-government must be designed largely with

But if all discussion of public affairs is conducted in English, then public life is going to be confined for many generations to come to a narrowly restricted class. How can electorates ever be brought to grasp the questions submitted to their judgement, if all public discussion is to be conducted in a foreign tongue? The use of the vernaculars in politics is essential if India is to advance towards responsible government at any but the slowest pace. The areas of provincial self-government must be designed largely with

a view to making it possible for public business to be discussed in a language which all the legislators can speak with ease, and which the largest possible number of electors can understand. Given these conditions, a vast number of land-holders and others, who cannot conduct debates in English, are rendered available for public life. The hope of popular government lies in the vernaculars.¹

§ 17. The educated classes in India have long claimed their country's right to develop on the lines of a self-governing Dominion, and that claim has now been recognized in words which I venture to prophesy will prove as irrevocable as Magna Carta itself. I have heard a number of Indians say that it is only in the last few months that they have begun to realize what responsible government means; and indeed it would be strange if it were otherwise. If Socrates were here he would say that such confessions were the beginning of wisdom, and if you are to take the self-governing Dominions as the model upon which you mean to construct the polity of India, it is vital to realize what a Dominion means. A community so different as India cannot copy their constitutions outright. The real lesson they have to teach is that of all commonwealths, that the polity of India must be built up by a series of experiments and in accordance with the lessons they give. But certain lessons can be learned at once, from the experience already gained by the Dominions, and one of those lessons can be read in Quebec. No one will question now that it was a mistake on Lord Durham's part to try to force this French people of the Roman Catholic communion into an unnatural union with the British and Protestant community of Ontario. The main point of the federal structure adopted by Canada is that it enables a national union to be realized, while leaving distinct racial, linguistic, and religious units, organized as self-governing provinces, to lead their own life under their own conditions.

§ 18. If this experience is held in mind, can we really look forward to a United States of India within the British

¹ I had scarcely penned the above words when three Ooriya gentlemen, who had just been attending a deputation to the Viceroy and Secretary of State, called to see me. Their attention had been caught by the treatment of the question of areas in the Joint Address, and they came to urge the necessity of basing self-government on racial and linguistic units. One part of the Ooriya people are included in Madras and another in the Central Province. Naturally they desire a reunion with Orissa, which will bring together, in one self-governing State, some 10,000,000 Ooriya-speaking people.

a view to making it possible for public business to be discussed in a language which all the legislators can speak with ease, and which the largest possible number of electors can understand. Given these conditions, a vast number of land-holders and others, who cannot conduct debates in English, are rendered available for public life. The hope of popular government lies in the vernaculars.¹

§ 17. The educated classes in India have long claimed their country's right to develop on the lines of a self-governing Dominion, and that claim has now been recognized in words which I venture to prophesy will prove as irrevocable as Magna Carta itself. I have heard a number of Indians say that it is only in the last few months that they have begun to realize what responsible government means; and indeed it would be strange if it were otherwise. If Socrates were here he would say that such confessions were the beginning of wisdom, and if you are to take the self-governing Dominions as the model upon which you mean to construct the polity of India, it is vital to realize what a Dominion means. A community so different as India cannot copy their constitutions outright. The real lesson they have to teach is that of all commonwealths, that the polity of India must be built up by a series of experiments and in accordance with the lessons they give. But certain lessons can be learned at once, from the experience already gained by the Dominions, and one of those lessons can be read in Quebec. No one will question now that it was a mistake on Lord Durham's part to try to force this French people of the Roman Catholic communion into an unnatural union with the British and Protestant community of Ontario. The main point of the federal structure adopted by Canada is that it enables a national union to be realized, while leaving distinct racial, linguistic, and religious units, organized as self-governing provinces, to lead their own life under their own conditions.

§ 18. If this experience is held in mind, can we really look forward to a United States of India within the British

¹ I had scarcely penned the above words when three Ooriya gentlemen, who had just been attending a deputation to the Viceroy and Secretary of State, called to see me. Their attention had been caught by the treatment of the question of areas in the Joint Address, and they came to urge the necessity of basing self-government on racial and linguistic units. One part of the Ooriya people are included in Madras and another in the Central Province. Naturally they desire a reunion with Orissa, which will bring together, in one self-governing State, some 10,000,000 Ooriya-speaking people.

Commonwealth, under which Sind and the Canarese-speaking people are tied and bound into the same self-governing unit as the Marathas ? Are not the Marathas themselves entitled to a State such as will perpetuate the traditions of that famous community ? Are the Tamil and Telugu peoples of Madras to be given no separate institutions of their own ? Are the Ooriyas to be left dispersed amongst three provinces, the larger section being left under the permanent domination of the people of Bihar ? To base responsible government on such units is not only to ignore the experience of the other Dominions, but to violate principles for which we are fighting in this war. You cannot base responsible government on units evolved on principles which are the antithesis of that system. You cannot graft figs on thorns, or grapes on thistles.

§ 19. The greatest of all the lessons to be learned from the United States and the self-governing Dominions is that India must build up her own constitution from her own experience. But before this can happen India must be given a chance of earning her experience. She must also be given electorates capable of reading that experience, and organs through which they can express their views. At present the people of British India have no experience of anything but of the vast unwieldy satrapies in which their races and religions are jumbled together. Before they can really judge of their own future needs, they must be given some experience of self-governing units of a size and character such as have been found necessary wherever responsible government has been achieved on federal lines. When this has been done, India will be in a position to choose for herself, as the result of her own experience, what areas are needed for the achievement of her ideal.

§ 20. Let me illustrate my meaning from the case of the United Provinces. In the plan proposed in the Joint Address, four self-governing States are to be created within that Province : Oudh, Benares, the Doab, and Meerut, with an average population of about 11,000,000 each. To each of these governments are to be given certain specific functions, revenues, and powers of taxation. The old province and the existing government are to remain in being, administering all the functions which have not been transferred. But at stated intervals those reserved functions and correlative revenues are to be transferred to the self-governing States, as their governments demonstrate their capacity for the additional burden.

Commonwealth, under which Sind and the Canarese-speaking people are tied and bound into the same self-governing unit as the Marathas ? Are not the Marathas themselves entitled to a State such as will perpetuate the traditions of that famous community ? Are the Tamil and Telugu peoples of Madras to be given no separate institutions of their own ? Are the Ooriyas to be left dispersed amongst three provinces, the larger section being left under the permanent domination of the people of Bihar ? To base responsible government on such units is not only to ignore the experience of the other Dominions, but to violate principles for which we are fighting in this war. You cannot base responsible government on units evolved on principles which are the antithesis of that system. You cannot graft figs on thorns, or grapes on thistles.

§ 19. The greatest of all the lessons to be learned from the United States and the self-governing Dominions is that India must build up her own constitution from her own experience. But before this can happen India must be given a chance of earning her experience. She must also be given electorates capable of reading that experience, and organs through which they can express their views. At present the people of British India have no experience of anything but of the vast unwieldy satrapies in which their races and religions are jumbled together. Before they can really judge of their own future needs, they must be given some experience of self-governing units of a size and character such as have been found necessary wherever responsible government has been achieved on federal lines. When this has been done, India will be in a position to choose for herself, as the result of her own experience, what areas are needed for the achievement of her ideal.

§ 20. Let me illustrate my meaning from the case of the United Provinces. In the plan proposed in the Joint Address, four self-governing States are to be created within that Province : Oudh, Benares, the Doab, and Meerut, with an average population of about 11,000,000 each. To each of these governments are to be given certain specific functions, revenues, and powers of taxation. The old province and the existing government are to remain in being, administering all the functions which have not been transferred. But at stated intervals those reserved functions and correlative revenues are to be transferred to the self-governing States, as their governments demonstrate their capacity for the additional burden.

§ 21. The last powers to be transferred are justice and police. When the States are ready to assume these, the time will have come when Indian statesmen from all the States, and also from the Principalities, must come together to frame a constitution under which the Government of India itself can be made responsible to an Indian electorate. India will then know who her real leaders are. She will also have developed a real public opinion based on experience. Above all, she will have electorates, legislatures, and ministries through whom that public opinion can find expression. The time will have gone when any handful of people can claim to express the voice of India.

§ 22. Thus when the accredited statesmen of India assemble in Convention to frame the National Constitution they will have seen the working of self-governing States of the kind which have been found necessary in other federal unions. But the old satrapies will still be in existence; and India can make her choice in the full light of experience. And three possible courses will then be open from which to choose. One will be to abolish the smaller States and merge them again in the old province. Or else India can decide to keep the States and let the old provinces go. There is, however, a third and quite possible course upon which her assembled statesmen may decide, which has been suggested to me, since the Joint Address was drafted, by an eminent historian and political thinker.

§ 23. The Indian community is so much vaster than any which has yet achieved federal self-government that experience may well prove that, between the central government and the district, not one but two areas and organs of provincial self-government may be needed. It will be quite open for the convention which drafts the final constitution to decide that Indian society needs the province on the scale of present satrapies *between the central government and the self-governing State*. An Indian nation constituted on these lines would then have a federal government responsible to an Indian electorate, and provincial governments for communities of forty or fifty millions responsible to provincial electorates, and State governments for communities of about 10,000,000 responsible to State electorates.

§ 24. As to the needs and merits of so novel an arrangement it is fruitless to speculate. The only criterion is experience. But that experience will not be available, unless, in the period of transition, India is allowed to test the value of self-governing States similar to those of the United States,

§ 21. The last powers to be transferred are justice and police. When the States are ready to assume these, the time will have come when Indian statesmen from all the States, and also from the Principalities, must come together to frame a constitution under which the Government of India itself can be made responsible to an Indian electorate. India will then know who her real leaders are. She will also have developed a real public opinion based on experience. Above all, she will have electorates, legislatures, and ministries through whom that public opinion can find expression. The time will have gone when any handful of people can claim to express the voice of India.

§ 22. Thus when the accredited statesmen of India assemble in Convention to frame the National Constitution they will have seen the working of self-governing States of the kind which have been found necessary in other federal unions. But the old satrapies will still be in existence; and India can make her choice in the full light of experience. And three possible courses will then be open from which to choose. One will be to abolish the smaller States and merge them again in the old province. Or else India can decide to keep the States and let the old provinces go. There is, however, a third and quite possible course upon which her assembled statesmen may decide, which has been suggested to me, since the Joint Address was drafted, by an eminent historian and political thinker.

§ 23. The Indian community is so much vaster than any which has yet achieved federal self-government that experience may well prove that, between the central government and the district, not one but two areas and organs of provincial self-government may be needed. It will be quite open for the convention which drafts the final constitution to decide that Indian society needs the province on the scale of present satrapies *between the central government and the self-governing State*. An Indian nation constituted on these lines would then have a federal government responsible to an Indian electorate, and provincial governments for communities of forty or fifty millions responsible to provincial electorates, and State governments for communities of about 10,000,000 responsible to State electorates.

§ 24. As to the needs and merits of so novel an arrangement it is fruitless to speculate. The only criterion is experience. But that experience will not be available, unless, in the period of transition, India is allowed to test the value of self-governing States similar to those of the United States,

1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 26

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

Abstract

Abstract

[illegible]

and of the Dominions, in which some unity of race and language and even religion is possible. The governing principle of all arrangements now made should be to enable the people of India, when the time comes for the final step, to shape her own constitution for herself from beginning to end, in the light not of abstract speculations, nor of random quotations from political writers, but of knowledge of her own needs and conditions hardly earned in the field of experience. The priceless gift which statesmanship can give her at this juncture, is a scheme of government in which that experience can be earned, and institutions through which its lessons can be read and expressed.

§ 25. The proposals set forth in the Joint Address were framed not only to provide a common ground upon which Europeans and Indians could join hands irrespective of race, but also to promote discussion. It is, however, useless to promote discussion between people who are not from the outset prepared to recast their ideas. There are, as I have said elsewhere, things which I should like to have seen added, and others which I should prefer to have seen excluded, in the twelve points to which the signatories subscribed. Having now read and heard volumes of discussion on these proposals, there is, so far, one point only upon which, at the moment of writing, I should wish to modify the original draft submitted to the signatories. I refer to the last part of article three, in which it is said that the ' areas *must* be settled at the moment when the first instalment of responsible government is granted '. Of the soundness of the views given in the last few pages I have since been convinced by the gentleman to whom I have referred. Had his views been before me at the time, I should not have advised the signatories to adopt these words. It is, I conceive, a duty to those who asked my advice, to tell not only them but the public of any point upon which I have since been brought to think that my advice was wrong.

Note.—A most interesting if somewhat theoretical book written some years ago on the subject treated in this chapter has just been published by Major E. A. Tandy, price 2s. It is called *India's Opportunity*, and is obtainable at the offices of the *Near East*, 14 Devonshire Square, Bishopsgate, E.C.

and of the Dominions, in which some unity of race and language and even religion is possible. The governing principle of all arrangements now made should be to enable the people of India, when the time comes for the final step, to shape her own constitution for herself from beginning to end, in the light not of abstract speculations, nor of random quotations from political writers, but of knowledge of her own needs and conditions hardly earned in the field of experience. The priceless gift which statesmanship can give her at this juncture, is a scheme of government in which that experience can be earned, and institutions through which its lessons can be read and expressed.

§ 25. The proposals set forth in the Joint Address were framed not only to provide a common ground upon which Europeans and Indians could join hands irrespective of race, but also to promote discussion. It is, however, useless to promote discussion between people who are not from the outset prepared to recast their ideas. There are, as I have said elsewhere, things which I should like to have seen added, and others which I should prefer to have seen excluded, in the twelve points to which the signatories subscribed. Having now read and heard volumes of discussion on these proposals, there is, so far, one point only upon which, at the moment of writing, I should wish to modify the original draft submitted to the signatories. I refer to the last part of article three, in which it is said that the ' areas *must* be settled at the moment when the first instalment of responsible government is granted '. Of the soundness of the views given in the last few pages I have since been convinced by the gentleman to whom I have referred. Had his views been before me at the time, I should not have advised the signatories to adopt these words. It is, I conceive, a duty to those who asked my advice, to tell not only them but the public of any point upon which I have since been brought to think that my advice was wrong.

Note.—A most interesting if somewhat theoretical book written some years ago on the subject treated in this chapter has just been published by Major E. A. Tandy, price 2s. It is called *India's Opportunity*, and is obtainable at the offices of the *Near East*, 14 Devonshire Square, Bishopsgate, E.C.

LETTER IX

ADMINISTRATIVE MECHANISM AND ITS
RECONSTRUCTION

§ 1. WE have now reached a point at which it will be convenient to notice one formidable criticism which cuts at the root of the whole principle upon which these suggestions are based. It is from the pen of an experienced administrator referred to on a previous page. His remarks on the subject are as follows :

Finally, my experience as an administrator condemns the scheme as alien to the present structure of the administration. Due to historical reasons, which it is unnecessary to specify, the functions of government are interwoven in a complete fabric and are not separate garments capable of division. There are no vertical lines along which the fabric can be divided. The district staff are the main threads running throughout the whole.

No official can satisfactorily serve two masters, whose instructions will be conflicting, without neglecting the interests of one. There might be some possibility of success with two entirely separate staffs each responsible to its own government, which is surely the case in the parallels mentioned by you, but none for a single staff responsible to two governments, which must be the case until Indian sentiment changes and until India can afford the more expensive duplicate establishments. Without the active support of the district officer, the progress of the departments of agriculture and co-operative credit would be seriously handicapped. How is it possible to divorce the management of forests, so intimately connected with the well-being of the people, from the general administration ?

§ 2. The argument, as I understand it, is as follows. The various functions of government are parts of a garment woven without seam which cannot be separated from each other. The public works department, the irrigation department, the forest department, the agricultural department, the educational department, &c., must all be kept in relation by the general control of the revenue department, i. e. the commissioners and collectors and board of revenue. Separation of any one department from the rest is alien to the present structure of the administration.

§ 3. This reasoning admirably illustrates the point I have made on a previous page, that the government of a dependency, with its mainspring in England, develops administrative mechanism of a type suited to itself. A responsible

government which takes its impetus from an electorate of its own requires a mechanism of a different type. For responsible government involves a system under which one minister controls irrigation, another forests, a third agriculture, and a fourth education. Harmony between these departments must be secured by the joint authority of the cabinet under the leadership of the premier. It cannot be secured by the district officers, who must eventually come under one minister, and must take their orders through him.

§ 4. I suggest that these difficulties can be overcome by the expedient suggested in the Joint Address. In the last chapter it was urged that existing provincial areas are the natural product of the system under which India has been governed as a dependency of England. The administrative mechanism is also a product of that system. The solution will be found, in taking provincial areas or States suitable for popular government, in giving them electorates with legislatures and executives responsible thereto, and in leaving those executives to develop departments and administrative mechanism suitable to the needs of responsible government.

§ 5. In any case the argument is least applicable to the first instalment of functions, because those have already been delegated in some measure to the district boards. So far as the reserved functions are concerned, which remain in the hands of the old government, it will have leisure in which to rearrange its organization with a view to a more complete separation of one function from another, in order to facilitate their successive transfer to the State ministries. The process will consist in gradually divesting the district officers of functions and of appropriating them to specific departments. In the end the district officer would be left with his general responsibility for maintaining order, and would only pass at the last stage to the control of the State ministry.

§ 6. This criticism admits that the separation of these functions from each other is largely a question of expense. I agree. The whole system, as at present established, is dominated by the motive of keeping within the limits of an inelastic revenue. And the reason why the revenue is inelastic is twofold. In the first place the taxing authority is unrepresentative. An alien and unrepresentative Government must keep down its expenses to the lowest possible point. It has abandoned large sources of revenue which can be tapped by elective authorities. But intense economy,

government which takes its impetus from an electorate of its own requires a mechanism of a different type. For responsible government involves a system under which one minister controls irrigation, another forests, a third agriculture, and a fourth education. Harmony between these departments must be secured by the joint authority of the cabinet under the leadership of the premier. It cannot be secured by the district officers, who must eventually come under one minister, and must take their orders through him.

§ 4. I suggest that these difficulties can be overcome by the expedient suggested in the Joint Address. In the last chapter it was urged that existing provincial areas are the natural product of the system under which India has been governed as a dependency of England. The administrative mechanism is also a product of that system. The solution will be found, in taking provincial areas or States suitable for popular government, in giving them electorates with legislatures and executives responsible thereto, and in leaving those executives to develop departments and administrative mechanism suitable to the needs of responsible government.

§ 5. In any case the argument is least applicable to the first instalment of functions, because those have already been delegated in some measure to the district boards. So far as the reserved functions are concerned, which remain in the hands of the old government, it will have leisure in which to rearrange its organization with a view to a more complete separation of one function from another, in order to facilitate their successive transfer to the State ministries. The process will consist in gradually divesting the district officers of functions and of appropriating them to specific departments. In the end the district officer would be left with his general responsibility for maintaining order, and would only pass at the last stage to the control of the State ministry.

§ 6. This criticism admits that the separation of these functions from each other is largely a question of expense. I agree. The whole system, as at present established, is dominated by the motive of keeping within the limits of an inelastic revenue. And the reason why the revenue is inelastic is twofold. In the first place the taxing authority is unrepresentative. An alien and unrepresentative Government must keep down its expenses to the lowest possible point. It has abandoned large sources of revenue which can be tapped by elective authorities. But intense economy,

especially in capital expenditure, has also dwarfed the growth of revenues. The institution of authorities, able to raise and spend more because they are elective, will lead to an expansion of existing resources as in Japan. But in any case, without incurring additional expense, there can be no real change in the direction of popular government. Unless the policy proclaimed by the Secretary of State is to be renounced, additional expense must be faced. The resources of the country will bear it, and will expand in response to a more generous public expenditure. Poverty need arrest political progress in India no more than it has done in Japan. These conclusions are based upon a study of the revenue system which I have made elsewhere.¹

§ 7. If a real instalment of responsible government is to be given, it must carry with it powers of imposing new taxation. Self-government implies self-taxation. No power of voting will create a sense of responsibility in electorates, unless it involves power to order an increase of service to be rendered, coupled with a power conferred on the elective authority to impose the additional cost on the class from which the voters are drawn. There are two ways in which this may be done. Certain taxes capable of expansion, and roughly commensurate in their present yield to the cost of the duties transferred, may be handed over. The other and simpler plan is to hand over a proportion of the existing consolidated revenue commensurate to the powers transferred. This lump sum would grow with the general growth of revenue. If the Provincial State government desired to spend more on a service, e. g. primary education, than the growth of this revenue justified, then it must have certain sources of new taxation upon which to draw. The excise and power to increase cesses on land are the obvious sources. The essential point is that the new sources of revenue to be drawn upon should involve imposts which the voters themselves will feel.

§ 8. In order to build up and develop electorates in India the governments responsible thereto must have powers of taxation of their own. But the ministries must also have officers of their own, drawn, of course, from the existing services, but re-organized in departments of a type suitable for control by cabinets responsible to legislatures and electorates. I scarcely see how else the change necessary in the structure of the existing mechanism can be managed. Nor do I see how ministers, legislators, and electors are to

develop a real sense of responsibility for the functions entrusted to them, unless they have officers of their own distinct from those of the old governments. The arrangement whereby the district boards have discharged their functions through the existing departments of government, has, I believe, gone far to destroy their value as a factor in educating members and electors to a sense of responsibility.

LETTER X

THE TRAINING-GROUND OF ELECTORATES

§ 1. THE first step, then, is to call into existence governments responsible to electorates in each of the States, and transfer to them certain functions and revenues. The crux of the problem is to create electorates competent to bear the whole burden of government in India. A failure to realize the full significance of this truth has operated, I believe, to delay the progress of India towards self-government. How often, for instance, does one hear it said that the transfer to Indians of more responsible offices is an important step in that direction! Now let me say at once that I am in favour of reducing the number of British officials in India to the lowest point compatible with the maintenance of British authority so long as, and in so far as, the Indian administration is responsible to the British Parliament. I should like to see this done, if for no other reason, because England can ill spare this continuous drain on her best administrative talent. But Indian officials might be appointed to every office under the Viceroy, without advancing India one step on the road to responsible government. It is not in the civil service that the future rulers of India are going to be trained. Personally, I have yet to be convinced that India is going to find its leaders in the ranks of retired officials. It is not men trained in the Russian bureaucracy who are going to lead Russians from anarchy to orderly government. Those who are urging the appointment of more Indians to commissionerships, collectorships, and other posts of responsibility, *as a step preliminary to self-government, and as one which must be taken in advance of all others*, are, in my opinion, simply off the track. Responsible government is possible in so far as there are electorates adequate to the burden. Given such electorates, men capable of leadership will not be

THE TRAINING-GROUND OF ELECTORATES

§ 1. THE first step, then, is to call into existence governments responsible to electorates in each of the States, and transfer to them certain functions and revenues. The crux of the problem is to create electorates competent to bear the whole burden of government in India. A failure to realize the full significance of this truth has operated, I believe, to delay the progress of India towards self-government. How often, for instance, does one hear it said that the transfer to Indians of more responsible offices is an important step in that direction! Now let me say at once that I am in favour of reducing the number of British officials in India to the lowest point compatible with the maintenance of British authority so long as, and in so far as, the Indian administration is responsible to the British Parliament. I should like to see this done, if for no other reason, because England can ill spare this continuous drain on her best administrative talent. But Indian officials might be appointed to every office under the Viceroy, without advancing India one step on the road to responsible government. It is not in the civil service that the future rulers of India are going to be trained. Personally, I have yet to be convinced that India is going to find its leaders in the ranks of retired officials. It is not men trained in the Russian bureaucracy who are going to lead Russians from anarchy to orderly government. Those who are urging the appointment of more Indians to commissionerships, collectorships, and other posts of responsibility, *as a step preliminary to self-government, and as one which must be taken in advance of all others*, are, in my opinion, simply off the track. Responsible government is possible in so far as there are electorates adequate to the burden. Given such electorates, men capable of leadership will not be

wanting, though they will not be found in the ranks of officials. If your bureaucracy were at once Indian throughout, and also the most highly trained in the world, you would not be in sight of responsible government until you had evolved responsible electorates. The key to the problem before us is electoral reform. Civil service reform is another question altogether.

§ 2. In a previous chapter I urged that electorates cannot be developed merely by the kind of education given in schools and colleges. It is only by exercise of some responsibility that electorates can be rendered fit to exercise more. Such responsibility may and indeed must be limited, to begin with; but in order to have any effect it must be real. Representative government hinges on the fact that electorates cannot do things for themselves. They must have representatives through whom to do them. Those representatives they must be able to dismiss by their votes, for otherwise their agents would not be responsible to the voters. But political responsibility is always a two-sided relation. If it means that executives and legislatures are responsible to the electorates for carrying out their mandates, it means no less that the electorates are responsible to their representatives for rendering them the necessary obedience and providing them with the funds and powers. A genuine responsibility is always bilateral. It is not enough for an electorate to instruct its representatives to build more roads, to multiply schools and colleges, or to settle contentious issues this way or that. They must also learn by experience that these things cannot be done unless they are prepared to see those representatives impose taxation upon them, and to acquiesce in the exercise of powers without which their elected rulers cannot give effect to their mandates. Just as the electorate must from time to time have the power of dismissing its agents, so must the agents themselves be able to retire and refuse to serve unless the electorate will grant them the means and powers required to give effect to its mandate. The system must be so simple as to bring home this elementary position as quickly as possible to the electorates.

§ 3. In various quarters it is strongly argued that electorates must first be prepared by experience in the field of local government. The advocates of this view would begin, where Lord Ripon tried to begin thirty years ago, by making district, village, and town boards really responsible to electorates. And their reason for this position is partly

wanting, though they will not be found in the ranks of officials. If your bureaucracy were at once Indian throughout, and also the most highly trained in the world, you would not be in sight of responsible government until you had evolved responsible electorates. The key to the problem before us is electoral reform. Civil service reform is another question altogether.

§ 2. In a previous chapter I urged that electorates cannot be developed merely by the kind of education given in schools and colleges. It is only by exercise of some responsibility that electorates can be rendered fit to exercise more. Such responsibility may and indeed must be limited, to begin with; but in order to have any effect it must be real. Representative government hinges on the fact that electorates cannot do things for themselves. They must have representatives through whom to do them. Those representatives they must be able to dismiss by their votes, for otherwise their agents would not be responsible to the voters. But political responsibility is always a two-sided relation. If it means that executives and legislatures are responsible to the electorates for carrying out their mandates, it means no less that the electorates are responsible to their representatives for rendering them the necessary obedience and providing them with the funds and powers. A genuine responsibility is always bilateral. It is not enough for an electorate to instruct its representatives to build more roads, to multiply schools and colleges, or to settle contentious issues this way or that. They must also learn by experience that these things cannot be done unless they are prepared to see those representatives impose taxation upon them, and to acquiesce in the exercise of powers without which their elected rulers cannot give effect to their mandates. Just as the electorate must from time to time have the power of dismissing its agents, so must the agents themselves be able to retire and refuse to serve unless the electorate will grant them the means and powers required to give effect to its mandate. The system must be so simple as to bring home this elementary position as quickly as possible to the electorates.

§ 3. In various quarters it is strongly argued that electorates must first be prepared by experience in the field of local government. The advocates of this view would begin, where Lord Ripon tried to begin thirty years ago, by making district, village, and town boards really responsible to electorates. And their reason for this position is partly

because, like my friend whose letter I quoted in the last chapter, they cannot picture a transitional system, under which some provincial functions are transferred to electoral authorities while others are reserved to the existing provincial governments.

§ 4. In order to examine these positions it is necessary to realize that the spheres of local and political government are divided by a line that is fairly clear. The field which can be covered by local government is much the same in all countries. It is of necessity confined to the settlement of administrative details, and the framing of minor regulations and by-laws inseparable therefrom. The London County Council is perhaps the largest and most important body of the kind in the world. Its population and revenues exceed those of many sovereign States. On education alone its annual expenditure is in millions of pounds: and yet if it were empowered to pass an education Act, or to change the constitution of the minor municipalities within its area, its whole status and character would be radically changed. It would then have assumed functions now vested in Parliament and discharged through the Minister of Education and the President of the Local Government Board. It would have outstepped the limits of local government, properly so called, and have entered the field of a provincial government—a thing which would be quite possible if the United Kingdom were parcelled out at the same time into a number of similar provinces containing five million people and upwards.

§ 5. A provincial government is an organ which deals with political subjects, that is to say, with questions of principle upon which not merely the interests but also the consciences of great sections of the community are at issue. There is all the difference between a body which administers roads, sanitation, and schools, and one which can decide, by the measures it passes, the relative positions of Hindus and Moslems on municipal bodies, the principles upon which religion is to be handled, or the extent to which a particular language is to be used in schools. You could not hand over the functions of the Local Government Board and the Board of Education to the county councils of Wales, nor empower them to pass education Acts and local government Acts. They would be too small, and the diversity created would be too great. But all these powers might well be given to a provincial government representing the whole of Wales. Such a body would

because, like my friend whose letter I quoted in the last chapter, they cannot picture a transitional system, under which some provincial functions are transferred to electoral authorities while others are reserved to the existing provincial governments.

§ 4. In order to examine these positions it is necessary to realize that the spheres of local and political government are divided by a line that is fairly clear. The field which can be covered by local government is much the same in all countries. It is of necessity confined to the settlement of administrative details, and the framing of minor regulations and by-laws inseparable therefrom. The London County Council is perhaps the largest and most important body of the kind in the world. Its population and revenues exceed those of many sovereign States. On education alone its annual expenditure is in millions of pounds: and yet if it were empowered to pass an education Act, or to change the constitution of the minor municipalities within its area, its whole status and character would be radically changed. It would then have assumed functions now vested in Parliament and discharged through the Minister of Education and the President of the Local Government Board. It would have outstepped the limits of local government, properly so called, and have entered the field of a provincial government—a thing which would be quite possible if the United Kingdom were parcelled out at the same time into a number of similar provinces containing five million people and upwards.

§ 5. A provincial government is an organ which deals with political subjects, that is to say, with questions of principle upon which not merely the interests but also the consciences of great sections of the community are at issue. There is all the difference between a body which administers roads, sanitation, and schools, and one which can decide, by the measures it passes, the relative positions of Hindus and Moslems on municipal bodies, the principles upon which religion is to be handled, or the extent to which a particular language is to be used in schools. You could not hand over the functions of the Local Government Board and the Board of Education to the county councils of Wales, nor empower them to pass education Acts and local government Acts. They would be too small, and the diversity created would be too great. But all these powers might well be given to a provincial government representing the whole of Wales. Such a body would

then be exercising political powers. It would stand above the field of local government, and of mere administrative detail, such as can be delegated to a county council or district board. Thus there is a clear line between the administrative functions which can be delegated to a local body, even so large and important as the London county council, and the political functions which can be exercised by provinces which may be as small as Prince Edward Island in Canada or Rhode Island in the United States.

§ 6. The same is equally true of India. The creation of local authorities and the definition of their constitutions and powers is a political function. It is none the less one which cannot be undertaken by the Government of India, but must be relegated to provincial governments. In recent years the educational policy of the government of the United Provinces and municipal legislation have involved the settlement of sharp issues between the Hindu and Moslem Communities. In such legislation the Provincial government decides the nature of the minor revenues assigned to these bodies, and within what limits such revenues can be increased or reduced. It has also to decide what grants from government revenues are to be placed at the disposal of the boards, and especially the principle upon which such grants are to be apportioned amongst the numerous local authorities. The decision of such issues cannot be left to the district and municipal boards. To them is entrusted the construction and maintenance of roads and drainage systems, the control of building, &c., and the making of by-laws dealing with these subjects. In the educational sphere it is left to the boards to decide where to open new schools, where to close schools, where to aid them, how to staff them, how to train the staff, where to build new buildings, how to build them, and so on. In many of these matters they are required to satisfy certain minima conditions laid down by the local self-government board or the educational department.

§ 7. In the joint scheme it is proposed to transfer minimum powers at the outset to Ministries responsible to legislatures and electorates for areas such as could serve as the future self-governing provinces of a United States of India. These minimum powers would include the control of local government and of primary education. This does not mean that they would be nothing but enlarged district and municipal boards, but the very opposite. It means that

then be exercising political powers. It would stand above the field of local government, and of mere administrative detail, such as can be delegated to a county council or district board. these new and popular governments would be charged with the control of local authorities, which from the nature of the case those bodies cannot exercise for themselves. The State governments would be bodies charged with the settlement of political questions such as cannot be relegated to district, village, and town boards. They could, for instance, pass a municipal Act or an education Act, and in doing so would have to face and settle all the disputes between Hindus and Moslems which the recent legislation in the United Provinces has roused.

§ 8. Further examples may be taken from the data contained in papers No. V and VI. An elective authority would probably be pledged to a rapid extension of education for which it would have to find the revenue. If the facts and arguments contained in V are correct, those revenues would have to be raised from the land, whether by increasing the cess, or else by extending the income tax to incomes derived from land. It cannot be said too often, or too strongly, that no scheme of reforms will afford a real exercise in the practice of self-government which does not vest the elected body with power to impose fresh taxation on the community which elects it. That is the essence of responsible government. Self-government implies self-taxation. Such bodies must, of course, be given a share of existing revenues commensurate to the functions imposed upon them, and also to the natural growth of those revenues. But if candidates seeking election advocate a greater expenditure than those revenues warrant, they must do so with the knowledge that they will have to impose taxes upon the electors whose votes they are seeking. If a majority of those electors vote in favour of an increase in the public services they control, they must do so with the knowledge that the increase must be met, in part at any rate, from their own local resources. The words *in part* are used advisedly, for the old government might foster the habit of self taxation, where funds are available for grants-in-aid, by dividing the grants in proportion to the new revenues which electoral authorities have raised for themselves.

§ 9. Another example is afforded by the district settlements. In 1919 these settlements will expire and come up for renewal. A provincial ministry entrusted with the control of local government would then have to grapple with the task which the present government discharged in 1914. It would have to settle how much of its own revenues could be spared for grants-in-aid to the boards, and (a far more formidable

task) how that sum is to be divided amongst all the bodies in question. The scheme of division briefly outlined in the opening pages of VI, was an example of administrative skill carried to its highest point. It was a masterpiece of applied statistical science, based upon an infinity of data and patiently worked out to the last detail. It is almost too perfect for the rougher conditions of popular government, which means government by laymen. Without a long official training it would be difficult for a minister to master the technical calculations; and it is safe to add that in no popular assembly in the world would more than a handful of members be found to grasp the explanations, assuming that the minister were competent to give them. Even in the British Parliament, which is in point of education and intelligence, inferior to no other elective chamber, a minister would be most likely forced to adopt some cruder and therefore less equitable basis of division, such, for instance, as population. He would shrink from the danger of asking members to ratify a scheme which few or none of them would understand. As a piece of distributive justice, the settlement made would most likely compare unfavourably with that which was made by the science, exactitude, and industry of the I.C.S.

§ 10. Another feature of this settlement to be noticed is the position of those who made it. They were men disposed by nature and training to justice; but had they been otherwise they had no temptation to injustice. Their tenure of office was not affected by the manner in which their division of the grant was received, and by that division they had nothing remotely to gain or lose. The consent of the legislature was not even required, for the calculations were examined and finally ratified by the Lieutenant-Governor in the quiet detachment of his own study.

§ 11. A glance at countries where provincial self-government exists will reveal the totally different position of a minister holding office by virtue of a majority of legislators who are looking to their constituents for re-election. Not merely his own tenure of office, but that of his colleagues, would be affected by that issue and might even depend on it. The minister would not be called upon to satisfy the whole body of members, but rather the majority who keep him in office. The fate of a ministry often depends upon a margin of votes from certain particular districts, and the voters of those districts may convince their members that their re-election will depend upon how far they secure from

the government a generous share of the plunder. And thus begins the sordid struggle which Americans aptly call the fight for the pork-barrel. This struggle appears but little in debate. It proceeds behind the closed doors of ministers and whips, who are given to understand, by no uncertain signs, that the continued support of this or that member will depend on the share of the plunder given to his constituents. Such divisions of public money test the capacity of a people for doing justice between themselves. But it also develops that capacity by exercise, assuming that the test is not so severe as to break it down altogether. A complete and final collapse of justice leads to disorder.

§ 12. The last and most instructive case is afforded by the controversy between the protagonists of Hindi and Urdu. It is issues like these which test and exercise the faculty of self-government to the full. For mere money is capable of division, even if the division be unjust. But in life there are issues, moral, religious, and political, deep as the well-springs of human belief, such as are not capable of division. There are principles upon which those who hold them will be willing to accept an adverse ruling from a third party who stands outside the controversy, because knowing his detachment, they believe in his justice. It may well happen, however, that they would go to extremes rather than accept that same ruling at the hands of the party to which they are opposed.

§ 13. The relative positions of Hindi and Urdu in the vernacular schools, which the Lieutenant-Governor of the United Provinces had to decide in 1914, may be taken as a typical example of such issues. No pains were spared to elicit from educated Indians, whether by means of committees or discussions in the legislative councils, an expression of all their different opinions. The Lieutenant-Governor studiously exposed himself to the influence of these various views. He saturated his mind in all the reports and speeches stating the reasons upon which they were based. And then having done so he wrote: 'Mutual concessions seem impossible; and it is "*clearly the duty of the government to formulate a decision*"'. And so he recorded a decision which was not exactly any of those which lay before him but one, the terms of which he had framed for himself. And because he was a foreigner, a member of neither religion, unbiased, therefore, in his interests, absolutely detached in his point of view, and universally recognized to be so, his decision was accepted almost without demur.

and certainly without resistance on the part of either of the religions involved. In this manner the question was decided for the time being, though in future years it is sure to be raised again in some form or other.

§ 14. There are certain features of the case which from the standpoint of this inquiry call for remark. If a question at issue can be settled by willing agreement of *all* the parties concerned, that is usually the best possible decision. But the fact that such settlements are not always possible is too often ignored. The existence of law courts backed by the sheriff, policeman, and soldier is a standing witness to the fact. And, as may be seen in the present case, there are issues beyond the jurisdiction of courts, which cannot be settled by agreement, but which cannot be left unsettled without inflicting grievous injury on third parties and on future generations. Such issues a government must sooner or later decide on lines not wholly acceptable to one party or even perhaps to either. This was what Washington meant when he said, 'Influence is not government'. The influence of rulers should be used to the full to induce an agreement between the parties at issue. But failing such agreement the time comes when government must decide, or civilization will stagnate or decay. And the decision must be accepted by a body of opinion strong enough to neutralize resistance, not necessarily because the decision is approved, but rather because the majority of thinking men are resolved to uphold the authority of government.

§ 15. The decision in question was not the one suggested by any of the parties concerned. And yet it was accepted by all those parties because it was made by a man in whose anxiety to mete out impartial justice every one believed. But it was not merely in this justice of one individual they trusted. That individual was responsible to the Governor-General, the Secretary of State, the British Parliament, and finally to public opinion in England. The first could advise his dismissal, the second could dismiss him, the third could exact it, the fourth could demand it. The acceptance of such decisions in India is not based merely on confidence in the justice of an individual officer. It is based to an even greater extent on confidence that an authority six thousand miles away will appoint officers who are just, and remove those who fail in their charge. The manner in which decisions of such issues are accepted in India, is largely due to the fact that those who make them are answerable to an authority remote from the seat of

and certainly without resistance on the part of either of the religions involved. In this manner the question was decided for the time being, though in future years it is sure to be raised again in some form or other.

controversy. Let any one consider whether this decision could have been so made and so accepted if the same individual had been a prime minister, responsible not to the British Government, but to an electorate in the United Provinces, and dependent for the tenure of his office on the support of a majority in the legislative council, elected by a majority of the voters. Imagine the position of the same individual, with the same character and reputation in this wholly different position, and one then begins to see how much depends upon the fact that he is now responsible to an authority which is detached and impartial because it is foreign.

§ 16. It is this that is meant by saying that the government of India is in trust. The acceptance of decisions made by that government between two rival sections in India is due to the confidence in the trustees, by reason of their disinterest in and detachment from the issues at stake. Where questions are at issue between India and the British trustee, as in the case of the cotton duties, this confidence is wanting.

§ 17. The immediate administration of vernacular schools, within limits carefully prescribed, has been entrusted to district and municipal boards. Within those limits, they are charged with the task of making decisions which must often affect minor matters at issue between Hindus and Moslems. They might support maktabas at the expense of pathshalas. A religious majority on a board might abuse its position in appointing the teachers. But the crucial decisions on matters of policy, such as that dealt with in the present case, are made for them by an authority responsible to a government and public opinion outside India.

§ 18. In the Joint Address a method has been suggested whereby decisions of this class might be relegated to a ministry responsible to a provincial electorate, and removable from office by the vote of a majority of legislators elected by a majority of voters. For the purpose of this inquiry it is useful to consider how the decision in question would have to be made under these circumstances. It is fair to assume that the same pains would be taken to elicit opinion as was taken in the case of the present government. An Indian minister of education, either a Mohammedan or a Hindu, would then draft the terms of a decision, which would be discussed, and probably modified, in the cabinet council. The government supporters would be sounded

It is fair to assume that the same pains would be taken to elicit opinion as was taken in the case of the present government. An Indian minister of education, either a Mohammedan or a Hindu, would then draft the terms of a decision, which would be discussed, and probably modified, in the cabinet council. The government supporters would be sounded

as to whether they would be prepared to back the decision. And, if the government were wise, means would also be taken to ascertain how far the minority in opposition and their constituents would be prepared to accept it. And all this time, it must be remembered the point at issue would be the subject of a burning public controversy. Meetings would be held, angry speeches would be made, and bitter articles would be written. Ministers would scarcely think of finding the best solution. Rather their efforts would be directed to finding one which their supporters would be prepared to back, but such as would not drive the minority of voters into an active or passive resistance of the law when passed. For the decision would have to take the form of a Bill to be debated by the legislature in open session; and upon the acceptance or rejection of the Bill the fate of the ministry would depend. The existence of the ministry itself would certainly hang on the issue. The best decision would scarcely be reached in the heat of the controversy. The best result attainable in practice would be the acceptance of some decision by the minority when they had been voted down. And that acceptance would depend, partly on their patriotism, upon their desire to support a system under which Indians could settle Indian questions for themselves, but largely also on the tolerance of the majority, on their willingness not to abuse their power shown by making concessions which would render the decision tolerable to the minds and consciences of their opponents.

§ 19. When compared with the smooth, detached, and accurate working of a good bureaucracy, responsible government is an ugly business, even in the British Isles. Why then, if you have such a system in India, should you seek to replace it by responsible government? An answer to that question can only be found by reference to the ultimate aims which government should seek.

§ 20. Some light may be thrown on the subject by considering an imaginary case in another field. As any one knows who has been in an army when rations are short and soldiers grow hungry, the question of apportioning the food available has a wonderful effect in revealing the character of different men and different units. In exceptional regiments you will find the men stinting themselves, so as to be sure that comrades, perhaps weaker than themselves, have enough. In such regiments the officers will readily leave the apportionment of the rations to the men themselves.

...the most important factor in the selection of a hospital for the treatment of a patient is the quality of the medical staff. The patient should be assured that the hospital is equipped with the latest medical facilities and that the medical staff is composed of the most competent and experienced physicians. The patient should also be assured that the hospital is accredited by the American Medical Association and that the medical staff is composed of physicians who are members of the American Medical Association. The patient should also be assured that the hospital is equipped with the latest medical facilities and that the medical staff is composed of the most competent and experienced physicians. The patient should also be assured that the hospital is accredited by the American Medical Association and that the medical staff is composed of physicians who are members of the American Medical Association.

An answer to that question can only be found by reference to the ultimate aims which government should seek.

§ 20. Some light may be thrown on the subject by considering an imaginary case in another field. As any one knows who has been in an army when rations are short and soldiers grow hungry, the question of apportioning the food available has a wonderful effect in revealing the character of different men and different units. In exceptional regiments you will find the men stinting themselves, so as to be sure that comrades, perhaps weaker than themselves, have enough. In such regiments the officers will readily leave the apportionment of the rations to the men themselves.

And now let us turn to a regiment of average men, some better and some worse. In many regiments, unhappily, there is pilfering in the cook-house when rations are short. In such a regiment, if the division of rations be left to the men themselves, some selfishness will be shown. The weaker and more unselfish will not get all they should. The justice done is rough and imperfect. There is some bickering which is rather squalid, but no positive violence, no actual starvation of the weaker men. So the officers leave the men to work out the division for themselves, trusting that, given sufficient time, they will learn to do the thing more fairly. And experience, indeed, teaches that, given time, this will be the result. This regiment, if the officers do not interfere, will gradually approximate to the standard of the first regiment described.

Thirdly we may take the other extreme and exceptional case, that of a regiment where the men in the cook-house eat their fill, and when the remainder does reach the rest, the stronger take so much that the weaker or less selfish actually starve and go sick. Or else there are constant disputes that end in a fight. In the case of such a regiment the officers must watch the food in the cook-house, to see that it is not pilfered by the cooks. And when the food is prepared, they must measure out the proportion justly due to each of the men, and watch while they eat it, to see that it is not taken from them. Externally, justice and order will prevail. The scene presented in the cook-house, and by the men at their meals, will contrast favourably with that presented in the second regiment described. There will be no unfairness, no ugly bickering, no squalid disputes, no pilfering by the cooks, and generally less waste. And yet results so secured by supervision of officers, however necessary, are almost barren of hope for the future. True they will enable the men to see what justice and order mean but when that is done, the spirit of fairness will develop but little, until they are able to assume some responsibility for dividing the food themselves. To become more just they must have opportunities of injustice; and unless they can be given some such responsibility, and some such opportunity, they will never begin to realize what a hateful thing injustice is.

§ 21. In this fanciful picture is implicit the philosophy of freedom, the whole issue at stake in the present war. It is material development, visible order, mechanical efficiency and financial economy in the present and in the immediate

future are the ends in view, then the Prussians are right. The decisions of government should be left to a handful of men of the clearest intellect and the strongest character. And, as in Prussia, the government from first to last must aim by all means in its power to foster a habit of unquestioning submission in the people they rule.

§ 22. If, on the other hand, the character of the people at large, the development in common men of their innate sense of justice, and of their faculty of doing justice to each other at their own expense, is the end in view, then government will decide nothing which it can relegate to the decision of those people themselves, without permitting a breakdown of social order. The choice lies between results we can handle and see, reduce to cash values, depict in reports and tabulate in figures, and those which cannot be seen, measured or described, or ever be perceived in the span of our own lives. You can measure railways in miles, and their earnings in cash. You can enumerate the acres brought under irrigation, estimate lives saved from famine and disease, and exhibit an unprecedented growth in the population. You can dwell on the increase of schools and scholars, the improvement in tillage and in crops per acre, and the growth of industrial undertakings. There is something so definite and tangible in it all; and rulers who compile such reports have the satisfaction of knowing that they are telling of things which they themselves have helped to achieve. The effect which a system has on the character of a people can never be stated in figures, and can scarcely be perceived in the life of a single administrator. It is in the end a question between ponderable and imponderable values, between things to be seen with the eye, and those to be seen only in dreams, between seed that the sower may reap, and that which shall only whiten to harvest long after he is dust and his memory forgotten amongst men. The heaven-sent ruler is one with an ear deaf to audible praise, an eye fixed upon a goal which he shall not reach, and above all, an indomitable faith in the power for growth in the weakest of his kind.

§ 23. The issue is between immediate efficiency, a rapid, material, and calculable progress, and the slow incalculable growth of character. But in the long run there is no conflict between the policy which looks to develop the character of a people, and that which seeks to promote their efficiency. The policy which looks only to efficiency and measurable progress, ends by destroying the objects it

The policy which looks only to efficiency and measurable progress, ends by destroying the objects it

pursues. If Englishmen have established order in countries which could not create it for themselves, it is only by virtue of qualities developed through ages in which their own characters have been tempered and moulded by their own mistakes. Such justice as Englishmen have exported to India has been learned in the doing of much injustice among themselves. And if Englishmen know how to get things done, that lesson has slowly been learned by enduring the results of their own neglect. It is much to have stopped bloodshed in India, to have created order, to have enforced justice, to have given her a modern equipment, and to have set her on the path of material progress. But the character of a people will not always stand still, even in the East. If it does not get better it will surely get worse. England cannot always provide these benefits for India without fatally enfeebling the character of her people. Neither material equipment nor even the enforcement of peace and justice between man and man are ends in themselves. They are hardly means. They are rather the beginnings of means. The end is simply the character of the people, which is formed in the process of adjusting their relations to each other. The establishment of social order from without renders it vastly easier for a beginning to be made. Suddenly to impose upon strength and faculties still unexercised the whole burden of maintaining order, is to jeopardize the conditions under which responsible government can begin. But unless or until genuine responsibilities are imposed on those few who are in some sort able to assume them, neither the capacity for making decisions will develop, nor yet the numbers of those who show promise of developing such capacity. All minor ends must be subordinated to that of fostering this native capacity, which, as it grows, will in ages to come yield a harvest of native efficiency and capacity for justice. Without travail there is no birth, and the glories of motherhood are hard to discern in the throes of delivery. 'Seek ye first the Kingdom of God and all things else shall be added unto you' is a saying as true in politics as in any other department of life. One final truth issues from the commonplace details set down in these pages. If effect on the growth of character is to be taken as the criterion of policy, it is not enough for government to consult the people. The burden of making decisions must be imposed upon those in some sort able to decide.

§ 24. Even amongst the wisest and most experienced of

§ 24. Even amongst the wisest and most experienced of

those who have dedicated their lives to India there is much shadowy thinking on this subject. Some months ago publicity was given to the following remarks which I had made in a private letter :

'The policy of the British Government is to develop (nationalist) opinion and to allow it to influence policy more and more. The responsibility of final decision it still reserves to itself. But it now looks to a time, however remote, when it will be able to transfer that responsibility to a section of Indians sufficiently large, disinterested, and capable of sound political judgement to assume it.'

These words seem to have occasioned no little alarm in the mind of so old and sincere a friend of Indian aspirations as Sir Courtenay Ilbert. In the Imperial supplement to *The Manchester Guardian*, issued on March 20, 1917, he wrote the following comments thereon :

What does the writer exactly mean when he says that self-government is the aim to which British policy in India must be directed ? . . . It is a pity that he did not make his meaning more clear, because his words may be quoted against him, and because self-government in the colonial sense would be a false ideal to pursue. India cannot copy patterns supplied by Canada, Australia, and South Africa. India must be developed on Indian lines, upon lines appropriate to Indian conditions, lines very different from those on which the great democracies in the self-governing dominions are running their course. In marking out those lines regard must always be had to Indian political opinion, which, as Mr. Curtis justly observes, is a reality, and an important reality, difficult though it may be to ascertain, and unsatisfactory as may be some of its features. It is a curious and puzzling blend, produced by the interfusions and interaction of Western and Eastern thought, abounding in paradoxes and contradictions.

§ 25. This veteran exponent of liberalism cannot bring himself to regard *self-government in the colonial sense* as other than a false ideal for India to pursue. In the kindness of his heart he seeks to acquit me of a meaning so dangerous and absurd. Yet that is the only meaning my words will bear, and I must avail myself of this opportunity to repeat that that was the only meaning they were meant to convey.

§ 26. No sane man wants India to copy *word for word* patterns supplied by Canada, Australia, and South Africa. Not so did Australia copy the Canadian constitution, nor South Africa those of Canada and Australia. They each examined their own conditions, and framed an instrument more or less suited thereto. They worked as engineers must

severally work, whether they are designing an internal combustion engine to drive a motor-car, aeroplane, ship, or pump. But all were applying one principle, that first reduced to practical form in the British constitution, the principle which seeks to impose responsibility for political decisions on all the members of the community affected by those decisions who are in some sort capable of making them. They are all, in short, expressions of the principle of responsible government. I must say once for all, without any kind of qualification, that the application of that principle as rapidly as possible is for me the only intelligible goal of British policy in India. Together with the question of self-preservation, of foreign policy and defence, it is the greatest of the problems which this Commonwealth has to face. It is the *articulus stantis aut cadentis reipublicae*—the cardinal principle by which this Commonwealth will stand or fall.

§ 27. What is the other ideal which Sir Courtenay Ilbert, Lord Morley, and the large number of public men who use language like this, have in mind? So far as I can discern, it is accurately stated in the words he has quoted from my own letter :

Broadly speaking, Government is at pains to recognize such opinion as there is. It accepts it where it can, often when it thinks that Nationalist opinion is not the best, ignoring it only where it appears so unsound that to accept and act upon it would lead to disaster. The policy of the British Government is to develop that opinion and to allow it to influence policy more and more. The responsibility of final decision it still reserves to itself.

§ 28. Here, it may be observed, is an exact description of the policy actually applied in 1914 to the settlement of the issues between the Hindi and Urdu vernaculars. No pains were spared to elicit Indian views on the subject from those capable of formulating and expressing them. Every phase of Indian opinion was before the Lieutenant-Governor. His mind was steeped in them. Had he been thinking of absolute efficiency in education, regardless of the prejudice in favour of either language, he might, perhaps, have decided in favour of one of them. He recognized the existence and reality of the feeling in favour of their own dialect entertained by each of the two religions. And having done so he made his decision, in discharge of the trust imposed upon him for the interests of his province by the Imperial Government in England.

§ 29. If this principle of government is the end-all and be-all of British policy in India, there is little which remains to be done in order to complete its final application. If, on the other hand, the burden of final decision is ever to be transferred to the people of India themselves there is almost everything to be done. But you will not have done it, or begun to do it, merely by substituting Indian for English officials from the Viceroy downwards. Under the present system the responsibility for decision would still be made in obedience to the authority outside India, which has the power to dismiss those officials. To make a beginning you must take certain clearly-defined functions of government, including taxation, and impose the duty of making decisions in respect of those functions on men responsible to, and therefore removable by, electorates all over India. To begin with, these electorates can only include the minority, however small, which is capable of judgement. In respect of the functions imposed upon them, those small electorates must act as the trustees of the majority of their fellow-countrymen, who are as yet incapable of political judgement. No educational means must be neglected to awaken the political consciousness of the classes outside the electorate, and to include them within it as rapidly as they are qualified. But of all those means the most potent will prove to be the spiritual commotion engendered by the system itself. It is the spirit of freedom, moving in the darkness of chaos, that creates light, calls new worlds into being, and peoples them with life and thought. It is as the four winds which blew in the valley of dry bones, till the breath came into them, and they lived, and stood up on their feet, an exceeding great army.

§ 30. The growth of genuine electorates embracing all religions and all castes will mark the progress of India up the difficult path of responsible government. So too will the disappearance of religious distinctions in those electorates, and the appearance of members of every caste side by side in the same cabinets and legislatures. And the growth in size and quality of the electorates will in practice determine the pace at which functions of increasing gravity can be transferred from the old governments to the new. Above all, it is essential that in this vast community the progress of the forward parts of India must not be tied down to that of the more backward. It is the example of the more progressive communities in successfully discharging weightier functions, which more than anything will stimulate the backward to fresh efforts. There is nothing so contagious

§ 29. If this principle of government is the end-all and be-all of British policy in India, there is little which remains to be done in order to complete its final application. It is the spirit of freedom, moving in the darkness of chaos, that creates light, calls new worlds into being, and peoples them with life and thought. It is as the four winds which blew in the valley of dry bones, till the breath came into them, and they lived, and stood up on their feet, an exceeding great army.

§ 30. The growth of genuine electorates embracing all religions and all castes will mark the progress of India up the difficult path of responsible government. So too will the disappearance of religious distinctions in those electorates, and the appearance of members of every caste side by side in the same cabinets and legislatures. And the growth in size and quality of the electorates will in practice determine the pace at which functions of increasing gravity can be transferred from the old governments to the new. Above all, it is essential that in this vast community the progress of the forward parts of India must not be tied down to that of the more backward. It is the example of the more progressive communities in successfully discharging weightier functions, which more than anything will stimulate the backward to fresh efforts. There is nothing so contagious

as example. Any system, which presupposes a uniform rate of advance to be imposed on the various provinces, will load the whole of India with fetters. Each must be enabled to advance at its own pace, not merely for its own sake, but rather because it will stimulate the others. And you must be prepared for retreat where you are proved by experience to have gone too far and too fast. Otherwise the courage to experiment and advance will be wanting. But for this there must be faith in the intention to advance; to create and maintain which faith rests with the Parliament of the whole Commonwealth, and for every member of that Commonwealth in all the seven seas, who is mindful of the principle by which it stands or falls. But mere intention is not enough: there must be clearness of vision and thought. 'Indian political opinion', says the writer quoted above, 'is a curious and puzzling blend, produced by the interfusion and interaction of Western and Eastern thought, abounding in paradoxes and contradictions.' But the first responsibility of Englishmen is for their own thinking. Now, if ever, it is for us to see to it that our thoughts are neither anxious nor puzzled, are free from all paradoxes and contradictions, and above all true to ourselves, our traditions, and our past. But in this we shall fail unless we first state our own ideas with precision, and then apply them to actual and particular cases. 'Influence is not Government.' And that distinction is as valid in India to-day as it was more than a century ago in the United States. Does Sir Courtenay Ilbert mean that we can continue indefinitely to elaborate the machinery through which opinions in India can be rendered accessible to the government? Does he really think that it will suffice for government to render itself more and more amenable to the influence of opinions which are often conflicting? And when all this has been done, is government in the end, finally and for all time, to reserve the responsibility of decision to itself? Is that task of deciding between conflicting interests never to be imposed on people in India themselves? Is the final control of functions like education never to be entrusted to Indians? Is the power to impose new revenues on themselves for the extension of those functions never to be given them? Are they never to be burdened with the difficult task of distributing those revenues between minor authorities? Are controversies between the various religions always to be settled in the end by the officers responsible to a government in London? To bring these

as example. Any system, which presupposes a uniform rate of advance to be imposed on the various provinces, will load the whole of India with fetters. Each must be enabled to advance at its own pace, not merely for its own sake, but rather because it will stimulate the others. And you must be prepared for retreat where you are proved by experience to have gone too far and too fast. Otherwise the courage to experiment and advance will be wanting. But for this there must be faith in the intention to advance; to create and maintain which faith rests with the Parliament of the whole Commonwealth, and for every member of that Commonwealth in all the seven seas, who is mindful of the principle by which it stands or falls. But mere intention is not enough: there must be clearness of vision and thought. 'Indian political opinion', says the writer quoted above, 'is a curious and puzzling blend, produced by the interfusion and interaction of Western and Eastern thought, abounding in paradoxes and contradictions.' But the first responsibility of Englishmen is for their own thinking. Now, if ever, it is for us to see to it that our thoughts are neither anxious nor puzzled, are free from all paradoxes and contradictions, and above all true to ourselves, our traditions, and our past. But in this we shall fail unless we first state our own ideas with precision, and then apply them to actual and particular cases. 'Influence is not Government.' And that distinction is as valid in India to-day as it was more than a century ago in the United States. Does Sir Courtenay Ilbert mean that we can continue indefinitely to elaborate the machinery through which opinions in India can be rendered accessible to the government? Does he really think that it will suffice for government to render itself more and more amenable to the influence of opinions which are often conflicting? And when all this has been done, is government in the end, finally and for all time, to reserve the responsibility of decision to itself? Is that task of deciding between conflicting interests never to be imposed on people in India themselves? Is the final control of functions like education never to be entrusted to Indians? Is the power to impose new revenues on themselves for the extension of those functions never to be given them? Are they never to be burdened with the difficult task of distributing those revenues between minor authorities? Are controversies between the various religions always to be settled in the end by the officers responsible to a government in London? To bring these

questions to a fine point, take the controversy over Hindi and Urdu described in these pages, which, in some form or other, is certain to rise again and again. Is a time never to arrive when decisions of that order can be made by men responsible to Indians, removable by Indians, or in plain words by an Indian electorate? And if ever electorates prove themselves capable of making and sustaining such decisions, can the process be stopped till all issues, however great, which affect Indians alone, are settled by men responsible to Indian electorates alone and removable at their bidding?

§ 31. Freedom, which in its political aspect is responsible government, is a human and not a Western ideal. True it was first conceived and applied in the West. But the truths of religion were first conceived and applied in the East. It was there men learned to worship their common Father at Jerusalem, Mecca, and where the Ganges flows. 'But the hour cometh, and now is, when the true worshippers shall worship the Father in spirit and in truth: for the Father seeketh such to worship him.' The whole earth is the temple of freedom, and the heavens themselves the dome that covers it.¹ Its spirit moves wherever men are learning to do justice to each other, even at the cost of injustice done. A noise and a shaking there will be, as the bones draw together, but a breath is coming from the four winds. The principle that men are responsible to each other is at work, and wherever it works it will grow with exercise. That principle, and no other, applied in detail to the facts of their own lives, has produced the constitutions of free nations. It has raised great armies willing to die, that in their dust that principle may live. And it is upon that principle, and no other, that a constitution which will bring freedom to India must be framed. The text of that constitution will be that neither of Canada, Australia, or South Africa. It will 'be developed on Indian lines, upon lines appropriate to Indian conditions'. But that will only be when it is developed by trial of Indian conditions, by the increasing application of one human, unalterable principle of society to Indian facts, by readiness to recognize, not the failure of a principle which cannot fail, but only of the mechanism by which we seek to apply it. And the pace of progress will be in direct proportion to the extent to which the machinery enables us to distinguish failure from success. If there are to be electorates in India, and

those electorates are to increase and rise to a fuller sense of the trust imposed on them, then surely they cannot be made too clearly to see that the trust rests on themselves, and what it is. Surely the officers who administer that trust must know what exactly it is for which they are responsible, and to whom. One executive cannot obey the orders of a government in England, and also the behests of an Indian electorate. So long as executives exist in India responsible to an authority in England, those executives must spare no pains to elicit and understand Indian opinion in all its varieties. They must steep their minds with knowledge of what is thought and felt by those whom the decision they frame will affect. But when they decide they must be held responsible for their decisions by one authority and one alone. And all the members of every executive must be held responsible to that authority, the Indian no less than the English members.

§ 32. But the converse proposition is equally important, and no less true. If there are to be executives in India responsible to Indian electorates, they must know clearly what those responsibilities are. And they must be responsible to those electorates so long as they hold office. They cannot be partly responsible to any authority outside India. And the responsibility which one executive has to its legislature and electorate, must be shared alike by every member of it until he resigns. There can be and must be public divisions in electorates and legislatures. In executives there can be none. A divided executive is the negation of responsible government.

LETTER XI

EXTREMISTS AND HOW THEY MEET

§ 1. The proposals suggested in the Joint Address are exposed to a fire of criticism from two extremes. Some of the Nationalists have awaked to the fact that the Congress-League scheme contains no element of responsible government. They begin to realize that the hope of India lies in achieving responsible government, and they are anxious that the provincial executives should be made responsible to electorates for all their functions at one stroke. They are, therefore, concerned to prove that two governments cannot exist side by side in the provinces, the one responsible

1. The first step in the process of developing a business plan is to conduct a thorough market research. This involves identifying the target market, understanding the needs and preferences of the customers, and analyzing the competitive landscape. Market research can be conducted through various methods, including surveys, interviews, and focus groups. The goal is to gather valuable insights that will inform the business strategy and help in making informed decisions.

2. Once the market research is complete, the next step is to define the business goals and objectives. These should be specific, measurable, achievable, relevant, and time-bound (SMART). The goals should outline the long-term vision of the business, while the objectives should focus on the short-term targets. This step is crucial as it provides a clear direction and purpose for the business plan.

3. The third step is to develop a detailed business strategy. This involves identifying the key areas of focus, such as marketing, sales, and operations, and outlining the specific actions to be taken in each area. The strategy should be based on the market research findings and the business goals. It should also consider the resources available and the potential risks and challenges.

4. The fourth step is to create a financial plan. This involves estimating the costs of the business, determining the revenue streams, and calculating the profit margins. The financial plan should include a budget, a cash flow statement, and a break-even analysis. It is important to be realistic in the financial projections and to have a contingency plan in place for unexpected expenses.

5. The final step is to write the business plan. This involves putting all the information gathered in the previous steps into a coherent and professional document. The business plan should be written in a clear and concise manner, using simple language and avoiding jargon. It should be a living document that can be updated as the business evolves and new information becomes available.

CHAPTER 10

MANAGING THE BUSINESS PLAN

1. The business plan is a living document that should be reviewed and updated regularly. This is because the business environment is constantly changing, and the business plan needs to reflect these changes. Regular reviews allow the business owner to track progress, identify areas for improvement, and make necessary adjustments. It is recommended to review the business plan at least once a year, or more frequently if the business is experiencing rapid growth or significant changes in the market.

2. One of the key aspects of managing the business plan is to ensure that it is aligned with the overall business strategy. The business plan should serve as a roadmap for the business, guiding the owner in making decisions and allocating resources. It should be consistent with the long-term vision and goals of the business, and it should provide a clear framework for achieving these goals.

3. Another important aspect of managing the business plan is to communicate it effectively to the relevant stakeholders. This includes the business owner, the management team, and the investors. The business plan should be presented in a clear and compelling manner, highlighting the key findings and recommendations. It should also be used as a tool for monitoring and evaluating the business performance, and for identifying areas for improvement.

those electorates are to increase and rise to a fuller sense of the trust imposed on them, then surely they cannot be made too clearly to see that the trust rests on themselves, and what it is. Surely the officers who administer that trust must know what exactly it is for which they are responsible, and to whom. One executive cannot obey the orders of a government in England, and also the behests of an Indian electorate. So long as executives exist in India responsible to an authority in England, those executives must spare no pains to elicit and understand Indian opinion in all its varieties. They must steep their minds with knowledge of what is thought and felt by those whom the decision they frame will affect. There can be and must be public divisions in electorates and legislatures. In executives there can be none. A divided executive is the negation of responsible government.

LETTER XI

EXTREMISTS AND HOW THEY MEET

§ 1. The proposals suggested in the Joint Address are exposed to a fire of criticism from two extremes. Some of the Nationalists have awaked to the fact that the Congress-League scheme contains no element of responsible government. They begin to realize that the hope of India lies in achieving responsible government, and they are anxious that the provincial executives should be made responsible to electorates for all their functions at one stroke. They are, therefore, concerned to prove that two governments cannot exist side by side in the provinces, the one responsible

to electorates for some functions, the other to the Secretary of State for all the rest. Their attitude on this question is reinforced by a desire to obtain the control of police at once.

§ 2. The more cautious section of Europeans, on the other hand, are anxious to see the promised reforms confined to the sphere of local government. They also are concerned to demonstrate that a specific devolution of some provincial functions to governments responsible to electorates, while others are reserved to the governments responsible to the Secretary of State, is impossible.

§ 3. Probably they believe that when local authorities have been made responsible to electorates, there are two stages which still remain, and that then provincial executives can be made responsible long before a similar change need be made in the sphere of the Government of India. This view, however obvious it may seem, will not, I believe, bear analysis. Why are functions of government in India, and in other countries of a like magnitude, divided between the central government and those of provinces? The answer is twofold. In the case of functions like education, variety of treatment is required to suit the local conditions of different areas. But there is a second and no less important reason. The maintenance of law and order is the basic function of government. It is for the performance of that duty, first and foremost, that the Governor-General-in-Council is responsible to Parliament through the Secretary of State. But the organization required for the purpose is so vast that it cannot be managed in all its details from one centre like Delhi or Simla. It must, for administrative reasons, be devolved on provincial governments, which are in fact nothing more nor less than local departments of the Government of India. That Government can remain responsible to Parliament only so long as the provincial governments remain responsible to itself for the *final* control of police.

§ 4. I lay particular stress on the word *final*, because I am not assuming that the police need always remain as one closely organized department from the inspector-general to the village chaukidar. I see no reason why the management of the village constables should not be relegated to the new elective authorities from the outset. Then there are the great bulk of the police, who correspond to those which an English county council controls. It is possible that these could be transferred to the control of the State

to electorates for some functions, the other to the Secretary of State for all the rest. Their attitude on this question is reinforced by a desire to obtain the control of police at once.

§ 2. The more cautious section of Europeans, on the other hand, are anxious to see the promised reforms confined to the sphere of local government. THE EFFECT OF THE DIET ON THE BLOOD SUGAR IN DIABETES MELLITUS
The effect of the diet on the blood sugar in diabetes mellitus has been studied by many investigators. The results have been conflicting. Some have found that a low carbohydrate diet is beneficial, while others have found that a high carbohydrate diet is beneficial. The present study was designed to determine the effect of the diet on the blood sugar in diabetes mellitus.

METHODS
The study was conducted in a hospital. The patients were selected from the medical wards. The diet was controlled by the hospital dietitian. The blood sugar was determined by the Folin-Wu method. The results were compared with the results of the control group.

RESULTS
The results of the study are shown in the following table. The blood sugar was determined at intervals of one week. The results show that the blood sugar was lower in the patients who were on a low carbohydrate diet than in the patients who were on a high carbohydrate diet.

CONCLUSIONS
The results of the study indicate that a low carbohydrate diet is beneficial in the treatment of diabetes mellitus. The blood sugar was lower in the patients who were on a low carbohydrate diet than in the patients who were on a high carbohydrate diet.

DISCUSSION
The results of the study are in agreement with the results of other investigators. A low carbohydrate diet is beneficial in the treatment of diabetes mellitus.

governments at an intermediary stage, provided always that a force competent to deal with political dacoity, anarchism, and the like is reserved to the control of the provincial executive responsible to the Government of India. Provided that forces are retained strong enough to step in and restore order in the case of any breakdown on the part of elective authorities, those authorities might be entrusted with the ordinary police work and large sections of the police during the transitional stage. An arrangement like this would enable government to test the capacity of State governments for maintaining order, before taking the final step of handing over the reserve or military police, including all the functions connected with the criminal investigation department. When using the word police in these letters, I must be understood to mean reserve forces necessary and adequate to deal with political crime and to restore order under all conditions. But whenever the final transfer of this reserve force is made to elective governments in the major provinces, the Government of India itself must then be made responsible to their electorates. The transfer of police to executives responsible to electorates is tantamount to the consummation of responsible government, to the attainment of the final goal set forth in the pronouncement.

§ 5. In all federal countries the control of police is in the hands of the provincial governments. The central government has nothing to do with police, unless disorders are such as to demand suppression by troops, when the central government steps in. Indeed you may say that a great country is ripe for full responsible government, when in a sufficient number of provinces electorates have been proved to be capable of maintaining order for themselves. From these provincial electorates a national electorate can be constituted fit to be trusted with the fullest responsibilities. I suggest, therefore, that a stage will be reached when the Imperial Government, judging by results ascertained by experience, will have to decide whether the electorate of this or that State can be entrusted with control of police. Whenever a sufficient number of State electorates have been given that control, then such electorates have been proved competent to form a general electorate to which the Government of India itself can be made responsible. It comes to this, that when control of all provincial functions, including police, can be given to electorates in the major provinces, then India is ripe for

governments at an intermediary stage, provided always that a force competent to deal with political dacoity, anarchism, and the like is reserved to the control of the provincial executive responsible to the Government of India. Provided that forces are retained strong enough to step in and restore order in the case of any breakdown on the part of elective authorities, those authorities might be entrusted with the ordinary police work and large sections of the police during the transitional stage. An arrangement like this would enable government to test the capacity of State governments for maintaining order, before taking the final step of handing over the reserve or military police, including all the functions connected with the criminal investigation department. When using the word police in these letters, I must be understood to mean reserve forces necessary and adequate to deal with political crime and to restore order under all conditions. But whenever the final transfer of this reserve force is made to elective governments in the major provinces, the Government of India itself must then be made responsible to their electorates. The transfer of police to executives responsible to electorates is tantamount to the consummation of responsible government, to the attainment of the final goal set forth in the pronouncement.

§ 5. In all federal countries the control of police is in the hands of the provincial governments. The central government has nothing to do with police, unless disorders are such as to demand suppression by troops, when the central government steps in. Indeed you may say that a great country is ripe for full responsible government, when in a sufficient number of provinces electorates have been proved to be capable of maintaining order for themselves. From these provincial electorates a national electorate can be constituted fit to be trusted with the fullest responsibilities. I suggest, therefore, that a stage will be reached when the Imperial Government, judging by results ascertained by experience, will have to decide whether the electorate of this or that State can be entrusted with control of police. Whenever a sufficient number of State electorates have been given that control, then such electorates have been proved competent to form a general electorate to which the Government of India itself can be made responsible. It comes to this, that when control of all provincial functions, including police, can be given to electorates in the major provinces, then India is ripe for

full responsible government. The transfer of police can only be made as the last preliminary, before the final change by which complete responsible government will be established. The changes by which electorates are made responsible (a) for all provincial functions, (b) for those of the central government, must come so near together as practically to be part of one operation. To speak of handing over all provincial functions, including police, to electorates is, in effect, to contemplate the consummation of the goal, the final establishment of India as a self-governing Dominion.

§ 6. If this reasoning is sound, the Secretary of State is debarred from listening to demands that all provincial functions including police should be handed over, at this stage, to executives responsible to electorates. He cannot accept such proposals without transgressing the plain and explicit terms of the instructions by which he is bound. It is clear that the Imperial Government intends to transfer the responsibility for the whole government of India, which now rests on the British electorate, to Indian electorates as soon as may be. It is equally clear that it sees no electorates at the moment on whom that responsibility can be laid. It intends to develop such electorates, and to prove their strength, before laying on their backs the final function of government. I am sure that no British Parliament will consent to transfer the control of police to electorates before they have seen what the electorates are going to be and have gauged their capacity.

§ 7. As personally I believe that Parliament is right, I will not shrink from giving my reasons for that belief. Such limited electorates as there are in India have never been exercised in responsibilities outside the narrow field of local government. To take those electorates, or any others which can be framed on paper, and to place upon them at one stroke the basic responsibility of maintaining order, would, in my judgement, expose India to the very disasters which have overtaken Russia. It is not the damage to life and property of which I am afraid, nor even the danger to the British position in India, for England was never so strong as she now is. My principal reason is that the one thing which can seriously postpone the achievement of responsible government by India is a catastrophic breakdown of responsible government at the outset. Responsible government can, I believe, be achieved in measurable time by a process of evolution. In my judgement it can only be delayed indefinitely by revolution, by civil war, or a

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

100

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher than the number of incorrect responses for all groups. The number of correct responses was significantly higher than the number of incorrect responses for all groups. The number of correct responses was significantly higher than the number of incorrect responses for all groups.

full responsible government. The transfer of police can only be made as the last preliminary, before the final change by which complete responsible government will be established. The changes by which electorates are made responsible (a) for all provincial functions, (b) for those of the central government, must come so near together as practically to be part of one operation. To speak of handing over all provincial functions, including police, to electorates is, in effect, to contemplate the consummation of the goal, the final establishment of India as a self-governing Dominion.

§ 6. If this reasoning is sound, the Secretary of State is debarred from listening to demands that all provincial functions including police should be handed over, at this stage, to executives responsible to electorates. He cannot accept such proposals without transgressing the plain and explicit terms of the instructions by which he is bound. It is clear that the Imperial Government intends to transfer the responsibility for the whole government of India, which now rests on the British electorate, to Indian electorates as soon as may be. It is equally clear that it sees no electorates at the moment on whom that responsibility can be laid. It intends to develop such electorates, and to prove their strength, before laying on their backs the final function of government. I am sure that no British Parliament will consent to transfer the control of police to electorates before they have seen what the electorates are going to be and have gauged their capacity.

§ 7. As personally I believe that Parliament is right, I will not shrink from giving my reasons for that belief. Such limited electorates as there are in India have never been exercised in responsibilities outside the narrow field of local government. To take those electorates, or any others which can be framed on paper, and to place upon them at one stroke the basic responsibility of maintaining order, would, in my judgement, expose India to the very disasters which have overtaken Russia. It is not the damage to life and property of which I am afraid, nor even the danger to the British position in India, for England was never so strong as she now is. My principal reason is that the one thing which can seriously postpone the achievement of responsible government by India is a catastrophic breakdown of responsible government at the outset. Responsible government can, I believe, be achieved in measurable time by a process of evolution. In my judgement it can only be delayed indefinitely by revolution, by civil war, or a

general breakdown of public order. I am weighing my words when I say that continuous progress towards responsible government can only be delayed by subjects who try to undermine order, and by rulers who shrink from the duty of enforcing it.

§ 8. It is for this very reason that I am slow to accept the view, held by a section of my own countrymen, that provincial functions cannot be transferred to electorates by instalments. An electorate, it is urged, cannot assume any political functions entrusted to the provincial government without assuming the whole. The fifth proposition affirmed in the Joint Address -- 'that during the period of transition, governments of two types must co-exist, the one responsible to electorates for specific powers, the other to the Secretary of State for all other powers' -- is challenged and denied. Have these critics realized the practical results of their own position? It means that a full and final responsibility for all political functions, including the maintenance of order, will sooner or later have to be placed, practically at one stroke, on electorates trained in nothing but the details of district, village, and town administration. These electorates are to be confined to responsibilities in the sphere of local government. They are to be given no political responsibilities; and yet we are to look forward to a time when all the political responsibilities of India are to be placed on their backs together. It is just this which has happened in Russia, and the results are before us.

§ 9. The idea that electorates can be trained for the discharge of political functions in the narrow sphere of district, village, and town administration, is in my judgement a pure illusion. Whatever the text-books may say, they were not so trained in England. In the time of Cromwell the principle of election in local government was practically confined to small and narrowly restricted groups in the boroughs, which contained only a fraction of their population. In the parliamentary elections responsibility was confined to a minority so small that it was in fact an oligarchy. The circle of voters has been gradually broadened downwards, until, under the recent Act, it will, I am told, include a little more than one-fourth of the whole population.

§ 10. My own short official experience in England and South Africa related for the most part to local government. As a political student I have seen something of local government in most parts of the British Commonwealth. Like the liver in the human body, local authorities are the least

general breakdown of public order. I am weighing my words when I say that continuous progress towards responsible government can only be delayed by subjects who try to undermine order, and by rulers who shrink from the duty of enforcing it.

§ 8. It is for this very reason that I am slow to accept the view, held by a section of my own countrymen, that provincial functions cannot be transferred to electorates by instalments. An electorate, it is urged, cannot assume any political functions entrusted to the provincial government without assuming the whole. The fifth proposition affirmed in the Joint Address - 'that during the period of transition, governments of two types must co-exist, the one responsible to electorates for specific powers, the other to the Secretary of State for all other powers' - is challenged and denied. Have these critics realized the practical results of their own position? It means that a full and final responsibility for all political functions, including the maintenance of order, will sooner or later have to be placed, practically at one stroke, on electorates trained in nothing but the details of district, village, and town administration. These electorates are to be confined to responsibilities in the sphere of local government. They are to be given no political responsibilities; and yet we are to look forward to a time when all the political responsibilities of India are to be placed on their backs together. It is just this which has happened in Russia, and the results are before us.

§ 9. The idea that electorates can be trained for the discharge of political functions in the narrow sphere of district, village, and town administration, is in my judgement a pure illusion. Whatever the text-books may say, they were not so trained in England. In the time of Cromwell the principle of election in local government was practically confined to small and narrowly restricted groups in the boroughs, which contained only a fraction of their population. In the parliamentary elections responsibility was confined to a minority so small that it was in fact an oligarchy. The circle of voters has been gradually broadened downwards, until, under the recent Act, it will, I am told, include a little more than one-fourth of the whole population.

§ 10. My own short official experience in England and South Africa related for the most part to local government. As a political student I have seen something of local government in most parts of the British Commonwealth. Like the liver in the human body, local authorities are the least

satisfactory organs in the body politic. The details with which they deal do not, unhappily, attract and evoke the best talent, either in administrations or in electorates. The best men do not in practice come forward for election. It is also notorious that in all countries a lamentably small proportion of electors record their votes at the poll. I have seen the condition of local bodies in India adduced as conclusive proof of the inherent unfitness of Indians for any form of responsible government. Well, all I can say is that, if a political student were to test the capacity of Americans for self-government simply by a study of their local and municipal bodies, he would infallibly come to the conclusion that here was a people incapable of governing themselves. You will not evoke or develop whatever latent capacity for self-government there is in India until you have imposed on electorates the burden of deciding such issues as are now decided, and can only be decided, by provincial governments. At present those governments decide all the great questions at issue between Hindus and Mohammedans. Real political training will not have been started until you have remitted some of these questions for settlement to executives and legislatures responsible to electorates including Hindus and Mohammedans. The great sections into which Indian society is divided must be exercised in the practice of settling these issues for themselves. The mere administration of education and municipal laws made over their heads will never afford this training. Electorates must have power to pass laws for themselves which determine the relative positions of Hindus and Mohammedans, and of their respective scripts and languages, in the educational and municipal system. But to give this process of training a chance, the existing governments must stand by, with all their experience and with all powers necessary, to maintain order. To jeopardize order at the outset is to jeopardize the whole prospect of developing electorates such as will presently be able to maintain order for themselves.

§ 11. Those, I submit, are the conditions recognized and prescribed in the instructions under which the Secretary of State has been sent to India to seek for advice. It is those conditions which the system outlined in the Joint Address attempts to meet. Apart from extremists on both sides who honestly reject the pronouncement, all agree that full powers of local government should now be devolved on district, village, and municipal boards. The Joint

satisfactory organs in the body politic. The details with which they deal do not, unhappily, attract and evoke the best talent, either in administrations or in electorates. To jeopardize order at the outset is to jeopardize the whole prospect of developing electorates such as will presently be able to maintain order for themselves.

§ 11. Those, I submit, are the conditions recognized and prescribed in the instructions under which the Secretary of State has been sent to India to seek for advice. It is those conditions which the system outlined in the Joint Address attempts to meet. Apart from extremists on both sides who honestly reject the pronouncement, all agree that full powers of local government should now be devolved on district, village, and municipal boards. The Joint

Address proposes to go one step farther. It notes that the existing provinces, developed as satrapies of a vast dependency governed from England, include populations the size of great European nations. It proposes that the governments of these vast areas should devolve instalments of political powers on units commensurate with the self-governing provinces of other federal countries, upon the model of which it is now proposed to develop the government of India. That devolution it is proposed to increase, as the new Provincial State governments and their electorates show their capacity for bearing the burden, until they have proved themselves able to legislate on and administer all functions of government including police. When that point is reached, it is recognized that the time has come when a new constitution for India must be framed under which the Government of India itself must be made responsible to the joint electorates of India.

§ 12. Some better way of doing this than that suggested in the Joint Address may easily be found. I myself suggested in a letter to Mr. Bhupendra Nath Basu,¹ which has since been published, that the best way might be to establish a responsible executive for each existing province, to which functions might be handed over by the old provincial governments, as the new electoral authority showed itself able to take them. After studying the mass of criticism that was made on this proposal, I came to the conclusion that smaller units were needed as the States of a future United States of India. That may or may not be. But when we are told that the method of specific devolution in India must be confined to district, village, and town boards, and to such administrative details as can be devolved on local bodies, but that it cannot, by any manner of means, be extended to provincial and political functions, I confess I view such arguments with reserve. Moderates who advance them have not, I feel, faced the consequence of their own reasoning. They do not see that, sooner or later, they are proposing to hand over at one stroke all political functions, the whole government of India, to electorates which have never been called upon to exercise any responsibility, or to decide issues, in the genuine field of politics.

§ 13. Really the crux of the whole problem lies in finding some plan, whereby instalments of real political responsibility can be placed on electorates, in order that their

strength may be developed and proved, before they are asked to undertake the fundamental function of government—the maintenance of order; and where they are ready for that, they are ready for the whole government of India. It is therefore vital that a plan should be found whereby some provincial functions can be placed in their charge before they are asked to undertake them all. The public will do well to distrust arguments directed to prove that a thing obviously dictated by common sense cannot be done. I am old enough to remember in the nineties a committee of Treasury officials who proved that old-age pensions could not be established in England. I have lived to see them established. I have heard the most experienced politicians demonstrate that the Union of South Africa was impossible. I have seen it accomplished. The truth is that in all such matters the difficulties lie, not in immutable facts, but rather in the minds and hearts of men, which can be changed, and need but the courage of a leader to change them.

LETTER XII

PRINCIPLES OF REPRESENTATION

§ 1. THE first step in the path of reform must of course consist in the passing of an Act of Parliament, defining what the reforms are to be, and how effect is to be given them. In defining electorates two courses can be followed. They can be defined in the Act; but, as pointed out in the Joint Address, this course is likely to lead to a dangerous delay. The alternative is to remit the task of defining electorates to commissioners appointed under, and named in, the Act. The most we can do now is to suggest principles upon which they should be based. To begin with, it is clearly important that the voters should, so far as possible, belong to the class who will feel the incidence of new taxation imposed by the men they elect. My own belief is that any fresh burdens, however imposed, will mainly fall on the land. How far the tenants are rack-rented already I do not know; but in so far as they are not, it will be open to the landlords to transfer the tax to the cultivator by increasing the rents. I would therefore suggest the cultivation of a certain minimum area as the basis of the rural franchise. Nor, would I urge, should any voter, otherwise qualified, be rejected on the ground of illiteracy. Speaking of my

The first part of the paper discusses the importance of the
 Journal of Management Education in the field of management
 education. It then presents a review of the journal's
 content, highlighting the key themes and findings of the
 articles. The second part of the paper discusses the
 journal's impact on the field of management education,
 including its role in advancing research and practice.
 The final part of the paper discusses the journal's future
 directions, including its plans to expand its scope and
 reach.

PRINCIPLES OF REPRESENTATION

§ 1. THE first step in the path of reform must of course consist in the passing of an Act of Parliament, defining what the reforms are to be, and how effect is to be given them. In defining electorates two courses can be followed. They can be defined in the Act; but, as pointed out in the Joint Address, this course is likely to lead to a dangerous delay. The alternative is to remit the task of defining electorates to commissioners appointed under, and named in, the Act. The most we can do now is to suggest principles upon which they should be based. To begin with, it is clearly important that the voters should, so far as possible, belong to the class who will feel the incidence of new taxation imposed by the men they elect. My own belief is that any fresh burdens, however imposed, will mainly fall on the land. How far the tenants are rack-rented already I do not know; but in so far as they are not, it will be open to the landlords to transfer the tax to the cultivator by increasing the rents. I would therefore suggest the cultivation of a certain minimum area as the basis of the rural franchise. Nor, would I urge, should any voter, otherwise qualified, be rejected on the ground of illiteracy. Speaking of my

own village in England, I would trust the political judgement of a smallholder who could not write his name, more than I would that of the schoolmaster imported from London. In India you have, in the British officials, an admirable machinery for recording an illiterate vote, because they stand outside the issues which will divide parties. If necessary, enough of them can be drafted in from outside for the purposes of the election. Due weight can be given to the educated voters through university representation, or the representation of graduates.

§ 2. In the initial stages of the experiment, the framing of the voters' rolls should be kept in the hands of the provincial government. The system should be designed, so far as possible, to make it clear that the electorate of each State is designated, by every possible means, as the body of citizens who are the ultimate trustees of the interests transferred to the State government. I would leave it open to the assembly to extend the franchise by legislation, which would be subject to the safeguard of the veto. But I would also leave it open to the government of the province to extend or improve the electorate in case it should develop exclusive tendencies. It is desirable to enlarge electorates, so far as possible, if only because they are then less easy to corrupt. The existing microscopic electorates are a standing invitation to corruption which it is most difficult to discover. I know of a case in which Rs. 30,000 was spent by an unsuccessful candidate for a provincial council.

§ 3. The next step would be to delimit the constituencies, and this must be done largely with reference to population. So much the larger number of the constituencies will be rural that it would be well to give representation to universities, or, where there are none, to residents with degrees. Avoid, if you possibly can, separate constituencies based on religious divisions. More than anything else, they will hamper and delay the development of responsible government in India. Proportional representation is the obvious remedy. The complexity lies only in the counting of the votes, which can be done by skilled officials. The voting is simple, and, after a period of trial, the electors will begin to realize that the results reflect the real divisions of the electorate. In this, as in other matters, understanding will come with experience, if only the opportunity of experience be given.

§ 4. I have stated elsewhere that in several matters my

The voting is simple, and, after a period of trial, the electors will begin to realize that the results reflect the real divisions of the electorate. In this, as in other matters, understanding will come with experience, if only the opportunity of experience be given.

§ 4. I have stated elsewhere that in several matters my

advice was not taken by the signatories to the Joint Address. Communal representation is a case in point, and I am here at liberty to state my own convictions on the subject. Communal representation as I understand it means that Hindus and Moslems are to vote in separate constituencies, in such manner that a Moslem voter must vote for a Moslem candidate. He may not vote for one of any other religion, and the same applies to any other community to which communal representation is accorded. Moslems will thus learn to depend on an artificial protection instead of facing the real source of their weakness—their relative backwardness in education. It is like keeping in irons a weak but healthy limb, which only needs exercise to recover its strength.

The concession of this principle when electoral institutions were inaugurated a few years ago, is the greatest blunder ever committed by the British Government in India. I believe that, if this principle is perpetuated, we shall have saddled India with a new system of caste which will eat every year more deeply into her life. So long as it remains, India will never attain to the unity of nationhood. The longer it remains, the more difficult will it be to uproot, till in the end it will only be eradicated at the cost of civil war. To enable India to achieve nationhood, is the trust laid on us; and in conceding the establishment of communal representation we have, I hold, been false to that trust.

The system has eaten into the life of this people so deeply that, already, it is not possible to abolish at one stroke what might have been refused a few years ago. But I feel that we shall be guilty of an unpardonable crime against India if we fail now to make provision whereby these fetters, in which we have allowed her to bind herself, can be loosed.

The experience of America in the matter of slavery may help to a solution. When the constitution was framed, it was laid down that the importation of more slaves from Africa was to cease in a particular year—I think in 1808. And the slave trade ceased in that year. But the courage of the convention failed them in the matter of slavery itself; and no time was fixed after which slavery should cease to stain the soil of America. The result was that eighty years later slavery was abolished, but only by drenching that soil with the blood of a million men.

I plead this precedent for a definite time-limit to be set

The first of these is the fact that the majority of the respondents in the study were from the United Kingdom. This may have influenced the results, particularly in relation to the importance of the various factors. For example, the importance of the 'cost of the service' may be more significant in the UK than in other countries. Similarly, the importance of the 'quality of the service' may be more significant in the UK than in other countries. The second factor is the fact that the study was conducted in the context of a specific library. This may have influenced the results, particularly in relation to the importance of the various factors. For example, the importance of the 'quality of the service' may be more significant in this library than in other libraries. The third factor is the fact that the study was conducted in the context of a specific time. This may have influenced the results, particularly in relation to the importance of the various factors. For example, the importance of the 'cost of the service' may be more significant at this time than at other times.

The second of these is the fact that the majority of the respondents in the study were from the United Kingdom. But the courage of the convention failed them in the matter of slavery itself; and no time was fixed after which slavery should cease to stain the soil of America. The result was that eighty years later slavery was abolished, but only by drenching that soil with the blood of a million men.

I plead this precedent for a definite time-limit to be set

in the matter of communal representation. India is tied and bound by the chain of her past. Our first duty is to help her to break that chain instead of allowing one generation to rivet it more firmly than ever on those who come after. The least we can do is to fix a time-limit after which any arrangements now made for communal representation shall expire. Then we may hope that meanwhile the people of India may have learned such trust in each other that minorities will not insist on a system fatal to the development of all national life.

These, I know, are hard sayings for the Moslem community; yet 'faithful are the wounds of a friend'. Things there are bitter in the mouth, that chewed, swallowed, and digested are sweet in the belly.

§ 5. In the criticisms levelled against the Joint Address, it has often been urged that, before suggesting that electorates should be made responsible for certain functions, we are bound to say what the electorates are to be. This criticism, however specious it may seem at the first glance, will not bear the test of analysis.

To begin with, the Joint Address, like the pronouncement of August 20, relates, not to conditions in one province, but to those of all India. It was not possible to compile schedules of voting qualifications appropriate to all the varying conditions of the several provinces. I do not believe that such information at present exists in the files of the Home Department itself.

To this the answer may be made that discussion of the whole question should be postponed until the information is available and all the suggested electorates can be described. But this criticism shows a misconception of the elementary conditions under which an electoral system must be framed. You cannot appoint officers to make an electoral system in the air. You must give them instructions. You must first tell them the principle upon which the vote is to be given. That principle, if our reasoning is right, is simple. *It is that the voters should be those who will in fact feel the effect of the votes given.* It follows, therefore, that the officers appointed to frame the electorate must also know what powers, legislative as well as administrative, the governments responsible to the electorates are to exercise, and especially what their powers of taxation are to be. And these powers will differ in the case of each province—so various are their conditions and levels of advancement. In practice the definition of electorates is

in the matter of communal representation. India is tied and bound by the chain of her past. Our first duty is to help her to break that chain instead of allowing one generation to rivet it more firmly than ever on those who come after. The least we can do is to fix a time-limit after which any arrangements now made for communal representation shall expire. Then we may hope that meanwhile the people of India may have learned such trust in each other that minorities will not insist on a system fatal to the development of all national life.

These, I know, are hard sayings for the Moslem community; yet 'faithful are the wounds of a friend'. Things there are bitter in the mouth, that chewed, swallowed, and digested are sweet in the belly.

§ 5. In the criticisms levelled against the Joint Address, it has often been urged that, before suggesting that electorates should be made responsible for certain functions, we are bound to say what the electorates are to be. This criticism, however specious it may seem at the first glance, will not bear the test of analysis.

To begin with, the Joint Address, like the pronouncement of August 20, relates, not to conditions in one province, but to those of all India. It was not possible to compile schedules of voting qualifications appropriate to all the varying conditions of the several provinces. I do not believe that such information at present exists in the files of the Home Department itself.

To this the answer may be made that discussion of the whole question should be postponed until the information is available and all the suggested electorates can be described. But this criticism shows a misconception of the elementary conditions under which an electoral system must be framed. You cannot appoint officers to make an electoral system in the air. You must give them instructions. You must first tell them the principle upon which the vote is to be given. That principle, if our reasoning is right, is simple. *It is that the voters should be those who will in fact feel the effect of the votes given.* It follows, therefore, that the officers appointed to frame the electorate must also know what powers, legislative as well as administrative, the governments responsible to the electorates are to exercise, and especially what their powers of taxation are to be. And these powers will differ in the case of each province—so various are their conditions and levels of advancement. In practice the definition of electorates is

the last step, and not the first, in the framing of a constitution.

§ 6. The first step, and the only one possible at this stage, is to think out clearly the elementary principle upon which the electorates are to be framed. With what objects in view are electorates to be brought into existence? Our answer is clear and precise, and is so stated for the purpose of criticism and discussion. The object in view should be to fit the voters placed on the list for the exercise of wider political responsibility, for which purpose we contend that some such responsibilities must be given them at the outset. They will certainly make mistakes, and it is only by making mistakes, and by suffering brought on themselves, that they will learn.

§ 7. Granted an acceptance of that principle, the details can be worked out. Some of them can be settled in an Act of Parliament. Such an Act can enumerate the maximum powers that Parliament is prepared to transfer at the outset, in some provinces more, in others less. But the definition of the powers to be given to each province (especially those of taxation) of the electorates and of all other details required for the perfecting of the constitution to be given to each of the new electoral provinces, must be left to commissioners charged to inquire and decide on the spot. Otherwise the Bill will break down before it reaches the statute book, or else there will be a long and dangerous delay—dangerous because, until this question is settled, India, not knowing what her future is to be, will remain in a state of ferment and unrest. Upon this subject I have nothing to add to the arguments used in §§ 38 and 39 of the Joint Address.

LETTER XIII

THE QUESTION OF AN UPPER HOUSE

§ 1. In the memorandum prefaced to the Joint Address it is suggested that the State legislature should consist of one chamber only. No second chamber was suggested, though I knew that a demand would be made for one to consist either of the largest land-holders or of member selected by land-holders. The reason is that their hereditary pride revolts against the thought of seeking the suffrage of an electorate. The feelings of a zamindar are those of Coriolanus.

the last step, and not the first, in the framing of a constitution.

§ 6. The first step, and the only one possible at this stage, is to think out clearly the elementary principle upon which the electorates are to be framed. With what objects in view are electorates to be brought into existence? Our answer is clear and precise, and is so stated for the purpose of criticism and discussion. The object in view should be to fit the voters placed on the list for the exercise of wider political responsibility, for which purpose we contend that some such responsibilities must be given them at the outset. They will certainly make mistakes, and it is only by making mistakes, and by suffering brought on themselves, that they will learn.

§ 7. Granted an acceptance of that principle, the details can be worked out. Some of them can be settled in an Act of Parliament. Such an Act can enumerate the maximum powers that Parliament is prepared to transfer at the outset, in some provinces more, in others less. But the definition of the powers to be given to each province (especially those of taxation) of the electorates and of all other details required for the perfecting of the constitution to be given to each of the new electoral provinces, must be left to commissioners charged to inquire and decide on the spot. Otherwise the Bill will break down before it reaches the statute book, or else there will be a long and dangerous delay—dangerous because, until this question is settled, India, not knowing what her future is to be, will remain in a state of ferment and unrest. Upon this subject I have nothing to add to the arguments used in §§ 38 and 39 of the Joint Address.

LETTER XIII

THE QUESTION OF AN UPPER HOUSE

§ 1. In the memorandum prefaced to the Joint Address it is suggested that the State legislature should consist of one chamber only. No second chamber was suggested, though I knew that a demand would be made for one to consist either of the largest land-holders or of member selected by land-holders. The reason is that their hereditary pride revolts against the thought of seeking the suffrage of an electorate. The feelings of a zamindar are those of Coriolanus.

But the effect of a landed upper house will be to make the assembly a house of lawyers and money-lenders. There will be constant collisions on the subject of taxation between the two houses, and consequent deadlocks, as in Australia. The whole thing is too cumbersome for provincial government. Besides, the land holders, whose position gives them administrative experience, are badly needed in the assembly. It will be, or should be, the dominant house; and if they are to serve their country and do justice to their order, they must come to face the ordeal of popular elections. But something can be done to ease the process. In English boroughs and county councils the door is opened to a most useful class of members by the following expedient. Two thirds of the members are directly elected. These members then co-opt another third. Now, if this expedient were adopted, the older land-holders would put up the younger members of their order and support them at the direct election in order to secure seats for themselves by co-option. If induced to take part in elections, they will tend to become better and more indulgent landlords. They will, moreover, be driven to educate their sons for political life. If once the land-holding class be given the motive and opportunity of taking part in active political life, they may well work the salvation of India in its progress towards responsible government. An excessive artificial protection of any class invariably leads to its enfeeblement and undoing. Mohammedans, as well as land-holders, will do well to reflect on this truth.

§ 2. I understand that, at present, an agreement exists between representatives of the Hindu and Moslem communities to give 30 per cent. of the seats to the latter. If it is decided to give effect to this concordat, the following arrangement might be considered. Let us suppose that forty out of the sixty members have been returned by proportional representation. If the voting were strictly on religious lines, the result might yield thirty-three Hindus and seven Mohammedans. There would then remain the twenty members to be co-opted. Of these thirteen might be co-opted by the Moslem members, and seven by the Hindu members, the total result thus yielding the artificial proportions in the legislature laid down in the agreement. But Indians will have made a long step towards responsible government when they can trust each other so far as to forgo such arrangements.

But the effect of a landed upper house will be to make the assembly a house of lawyers and money-lenders. There will be constant collisions on the subject of taxation between the two houses, and consequent deadlocks, as in Australia. The whole thing is too cumbersome for provincial government. LETTER XIV

EXECUTIVE FUNCTIONS

§ 1. In order to sketch the constitution of the executive, it is necessary first of all to consider the functions which the new governments would have to discharge.

These may be divided into two classes.

I. In the first place there are the administrative functions which may involve legislation from time to time. Education is an instance. In this connexion it is important to note that, under the existing system, educational policy is embodied in executive resolutions and regulations. Under a system of responsible government it will have to be embodied in education Acts passed by the Assembly. A change of policy will involve a legislative amendment of the education Act.

II. In the second place there are the legislative functions, those which involve making some change in the existing laws, which may or may not involve administrative action or change as well. Legislation on marriages between castes might or might not involve some change in the machinery of registration.

§ 2. As functions belonging to class I involve expenditure, a fairly complete list of them can be framed by reference to the estimates of the existing provinces. From these estimates I will endeavour to frame a schedule showing the functions which could be transferred from time to time to the State governments, leaving a residuum, when the process is completed, which will have to go to the Government of India.

§ 3. Obviously the first powers to be transferred must be those the details of which have already been entrusted to the district and municipal boards.

These are—

I

Vernacular education.

Medical relief.

Rural sanitation.

Veterinary aid.

Roads, other than provincial trunk roads.

§ 4. The above is the smallest group of functions which could be transferred to the new bodies. I now come to those which might be added, either at once, or severally from time to time, as the administrative record of the new governments

Veterinary aid.

Roads, other than provincial trunk roads.

§ 4. The above is the smallest group of functions which could be transferred to the new bodies. I now come to those which might be added, either at once, or severally from time to time, as the administrative record of the new governments

may warrant. Nor is it necessary to transfer the same function to every State, for their conditions will differ. As we saw in the case of the police, parts of one function can be transferred, leaving the rest for subsequent transfer. Certain forest areas, for instance, could be handed over, the provincial government reserving control of the rest. The following is a list of such functions :

II

Provincial trunk roads and bridges.

Agriculture.

Co-operative credit.

Factories and industries.

Registration of deeds.

Local railways.

Forests.

Irrigation.

Charitable endowments.

Famine relief.

Higher education.

§ 5. Thirdly, we come to functions, which would only be transferred to a State when its Government and electorate had proved itself equal to the full burden of responsible government.

III

Law and justice.

Court of wards.

Jails.

Police (final control).

Control of the district officers.

§ 6. When this final transfer had been made to all the States, the old provincial government would vanish. Some or all of the following functions would then revert to the direct control of the Government of India :

IV

Irrigation systems included in the areas of two or more States.

Ecclesiastical affairs.

Archaeology.

Relations with Principalities.

Territorial and political pensions.

Ports and pilotage. (In the presidencies.)

And possibly the boards of revenue.

may warrant. Nor is it necessary to transfer the same function to every State, for their conditions will differ. LETTER XV

STRUCTURE OF THE EXECUTIVE

§ 1. THE elected members having been returned, the Chief Commissioner would convene them and they would proceed to complete the assembly by co-option. The Chief Commissioner would then send for the member whom he judged to be most capable of commanding the majority of votes and entrust him as Premier with the task of forming a government. Let us suppose that the functions entrusted to the new government are those in the first list, together with the control of municipal government, provincial trunk roads, and agriculture. These functions would require the following portfolios :

Primary education.

Local government.

Agriculture.

Public works.

Finance.

The Premier would select four colleagues from the assembly, assign one of these portfolios to each of them, retaining the fifth for himself. And, if he were wise, he would do all this in friendly consultation with the Chief Commissioner. The government having been constituted, they would meet the assembly under the presidency of the Chief Commissioner. A speaker would be elected, and the Chief Commissioner would then withdraw.

§ 2. As the methods of responsible government are strange to this country, it may be as well to explain one side of their working. Ministers, having been appointed, discuss their business and come to decisions amongst themselves in cabinet, a word which does not appear in the formal constitution. These executive decisions are then brought to the executive council, a formal body of ministers over which the Chief Commissioner would preside. The decisions become operative when signed by the Chief Commissioner. Provided they are legal, he *must* sign them on the advice of the ministers. But, before doing so, a constitutional governor is at liberty to discuss them with his ministers. Responsibility and the power of decision rest with ministers ; but they are only too glad to consider the advice of a governor who stands aloof from all parties and has perhaps watched the workings of government under several administrations. Having often been in contact with governors

ORIGINAL ARTICLES

THE EFFECT OF VITAMIN DEFICIENCY ON THE GROWTH OF THE RAT

BY DR. J. H. HARRIS, JR., AND DR. J. H. HARRIS, JR.

The effect of vitamin deficiency on the growth of the rat has been studied by a number of investigators. The results have been conflicting, but generally have shown that vitamin deficiency leads to a decrease in growth. The present study was designed to determine the effect of vitamin deficiency on the growth of the rat, and to determine the effect of the type of diet on the growth of the rat.

The rats used in this study were of the Wistar-Kyoto strain, and were divided into two groups. One group was fed a diet deficient in vitamin A, and the other group was fed a diet deficient in vitamin B₁. The rats were fed these diets for a period of six weeks, and then their growth was measured.

The results of the study showed that the rats fed the diet deficient in vitamin A grew significantly less than the rats fed the diet deficient in vitamin B₁. This was true for both the male and female rats. The results also showed that the rats fed the diet deficient in vitamin A had a significantly lower body weight than the rats fed the diet deficient in vitamin B₁.

The results of this study indicate that vitamin deficiency has a significant effect on the growth of the rat. The type of diet also has a significant effect on the growth of the rat. The results of this study suggest that a diet deficient in vitamin A is more likely to lead to a decrease in growth than a diet deficient in vitamin B₁.

The results of this study also suggest that the type of diet has a significant effect on the growth of the rat. The results of this study suggest that a diet deficient in vitamin A is more likely to lead to a decrease in growth than a diet deficient in vitamin B₁.

LETTER XV

STRUCTURE OF THE EXECUTIVE

§ 1. THE elected members having been returned, the Chief Commissioner would convene them and they would proceed to complete the assembly by co-option. The Chief Commissioner would then send for the member whom he judged to be most capable of commanding the majority of votes and entrust him as Premier with the task of forming a government. Let us suppose that the functions entrusted to the new government are those in the first list, together with the control of municipal government, provincial trunk roads, and agriculture. These functions would require the following portfolios :

Primary education.

Local government.

Agriculture.

Public works.

Finance.

The Premier would select four colleagues from the assembly, assign one of these portfolios to each of them, retaining the fifth for himself. And, if he were wise, he would do all this in friendly consultation with the Chief Commissioner. The government having been constituted, they would meet the assembly under the presidency of the Chief Commissioner. A speaker would be elected, and the Chief Commissioner would then withdraw.

§ 2. As the methods of responsible government are strange to this country, it may be as well to explain one side of their working. Ministers, having been appointed, discuss their business and come to decisions amongst themselves in cabinet, a word which does not appear in the formal constitution. These executive decisions are then brought to the executive council, a formal body of ministers over which the Chief Commissioner would preside. The decisions become operative when signed by the Chief Commissioner. Provided they are legal, he *must* sign them on the advice of the ministers. But, before doing so, a constitutional governor is at liberty to discuss them with his ministers. Responsibility and the power of decision rest with ministers ; but they are only too glad to consider the advice of a governor who stands aloof from all parties and has perhaps watched the workings of government under several administrations. Having often been in contact with governors

and ministers in the self-governing Dominions, I can testify to the cordial relations which prevail between them. Ministers often regard the governor as their best friend and adviser. He, on the other hand, generally refers to 'my ministers' in a tone of affectionate enthusiasm. In the situation I am sketching, responsible government in India would begin with an advantage which has been usually wanting in the colonies. The Chief Commissioner would be an expert, with a thorough grasp of all the public affairs of his Provincial State. His instructions would make it perfectly clear that all control and all responsibility in respect of functions transferred to ministers rested with them and not with himself. His experienced advice would be at their disposal, and, just because they were free to reject it, they would be all the more willing to seek and to consider it. His experience could influence them to the full. Responsibility would rest with them.

§ 3. As the point was raised and gave serious trouble elsewhere, it should be laid down that the Chief Commissioner must not ratify any decision which the law officers of the provincial government advise him to be contrary to law. Otherwise he must sign, if, after hearing his advice, ministers are unable to change their decisions, unless he is prepared to dismiss them and find others to take their place. He should be able to dissolve the assembly only on two conditions :

(1) that he can find ministers who will take the responsibility of advising a dissolution, and

(2) on instructions from the government of the province.

The policy of ministers at the opening of a session would, in accordance with the ordinary tradition, be announced in the Chief Commissioner's speech. But the usual conventions should be dropped, and phraseology should be used such as would make it clear to the electorate that the decisions announced were those of their own ministers and not those of the Chief Commissioner. He should appear merely as reporting the decisions of the ministers, like an impartial chairman reporting the resolutions of a committee.

§ 4. The Chief Commissioner, assisted by the junior commissioner, would continue to discharge the duties at present associated with his office (other than those transferred to the ministry) as an officer of the provincial government. In that capacity he would control the district officers as at present. He would, thus, be well situated to act as a link and a buffer between the officers of the old government and

the economy. The model is a dynamic system of four equations in four variables, y , k , l and m . The first equation is the production function, which is a Cobb-Douglas function with constant returns to scale. The second equation is the capital accumulation equation, which states that the change in the capital stock is equal to the investment minus the depreciation. The third equation is the labor force equation, which states that the change in the labor force is equal to the net immigration minus the natural mortality. The fourth equation is the government budget constraint, which states that the government expenditure is equal to the government revenue plus the change in the government debt. The model is solved by the method of undetermined coefficients. The steady state values of the variables are found by setting the time derivatives equal to zero. The stability of the steady state is analyzed by linearizing the model around the steady state and examining the eigenvalues of the Jacobian matrix. The results show that the steady state is stable and that the economy converges to the steady state from any initial conditions. The model also shows that the government expenditure has a positive effect on the steady state values of the variables. The net immigration has a positive effect on the steady state values of the variables. The natural mortality has a negative effect on the steady state values of the variables. The depreciation has a negative effect on the steady state values of the variables.

The policy of ministers at the opening of a session would, in accordance with the ordinary tradition, be announced in the Chief Commissioner's speech. But the usual conventions should be dropped, and phraseology should be used such as would make it clear to the electorate that the decisions announced were those of their own ministers and not those of the Chief Commissioner. He should appear merely as reporting the decisions of the ministers, like an impartial chairman reporting the resolutions of a committee.

§ 4. The Chief Commissioner, assisted by the junior commissioner, would continue to discharge the duties at present associated with his office (other than those transferred to the ministry) as an officer of the provincial government. In that capacity he would control the district officers as at present. He would, thus, be well situated to act as a link and a buffer between the officers of the old government and

the new. He would be able to mitigate friction between the district officers and those of the ministry, just as these officers themselves have done in their capacity as chairmen of the district boards and municipalities. He would want his ministry to succeed, and would use his authority with his district officers to get them to smooth difficulties away. But those officers should be specifically divested of all responsibility for functions transferred to the ministry. The discovery which the electors will make, however slowly, that their own ministers are responsible for these things, and that it is through their members that they must seek relief, is the most important item in their education. For the sake of the electors district officers must be warned to decline specifically to touch grievances which come within the jurisdiction of the State ministers.

§ 5. It may be useful to trace the manner in which the first ministry would assume its functions. Ministers would not take over their functions until they had organized departments for the purpose. Aided by the Chief Commissioner, each minister would select a head of his department from the ranks of existing officials. Aided by that officer he would obtain the necessary subordinates from existing cadres, and so organize his department. When ready to do so he would notify the provincial government that he was prepared to assume control of the functions assigned to him. To take one example, the educational department would then transfer the whole control of primary education to the minister of education and to his new department, built up from materials recruited in the old one.

§ 6. In the Joint Address it is proposed that the transfer of officers from the provincial staffs to those of the States should be arranged by ministers with the assistance of the Chief Commissioner. In the event of any final difference of opinion, the last word is to be with a permanent civil service commission. The success or failure of the experiment will, I believe, largely depend upon the ability of the first ministers to secure as the permanent heads of their departments the ablest members of the existing services. Decisions must rest with responsible ministers, but it is thus, and thus only, that ministers will have before them the best technical advice upon which to decide.

§ 7. The estrangement developed of late years between educated Indians and members of the service is deplorable. Like all such estrangements, it is largely due to ignorance of each other, and to want of any regular sphere of work

the new. He would be able to mitigate friction between the district officers and those of the ministry, just as these officers themselves have done in their capacity as chairmen of the district boards and municipalities. He would want his ministry to succeed, and would use his authority with his district officers to get them to smooth difficulties away. But those officers should be specifically divested of all responsibility for functions transferred to the ministry. § 7. The estrangement developed of late years between educated Indians and members of the service is deplorable. Like all such estrangements, it is largely due to ignorance of each other, and to want of any regular sphere of work

the economy. The model is a dynamic system of four equations in four variables, y , k , l and m . The first equation is the production function, which is a Cobb-Douglas function with constant returns to scale. The second equation is the capital accumulation equation, which states that the change in the capital stock is equal to the investment minus the depreciation. The third equation is the labor force equation, which states that the change in the labor force is equal to the immigration minus the emigration. The fourth equation is the migration equation, which states that the change in the migration is equal to the difference between the immigration and the emigration. The model is solved by the method of undetermined coefficients. The steady state values of the variables are found by setting the change in the variables equal to zero. The stability of the steady state is determined by the eigenvalues of the Jacobian matrix. The model shows that the economy converges to a steady state where the capital stock, the labor force, and the migration are constant. The steady state values of the variables are determined by the parameters of the model. The model also shows that the economy is stable around the steady state.

The model is a dynamic system of four equations in four variables, y , k , l and m . The first equation is the production function, which is a Cobb-Douglas function with constant returns to scale. The second equation is the capital accumulation equation, which states that the change in the capital stock is equal to the investment minus the depreciation. The third equation is the labor force equation, which states that the change in the labor force is equal to the immigration minus the emigration. The fourth equation is the migration equation, which states that the change in the migration is equal to the difference between the immigration and the emigration. The model is solved by the method of undetermined coefficients. The steady state values of the variables are found by setting the change in the variables equal to zero. The stability of the steady state is determined by the eigenvalues of the Jacobian matrix. The model shows that the economy converges to a steady state where the capital stock, the labor force, and the migration are constant. The steady state values of the variables are determined by the parameters of the model. The model also shows that the economy is stable around the steady state.

The model is a dynamic system of four equations in four variables, y , k , l and m . The first equation is the production function, which is a Cobb-Douglas function with constant returns to scale. The second equation is the capital accumulation equation, which states that the change in the capital stock is equal to the investment minus the depreciation. The third equation is the labor force equation, which states that the change in the labor force is equal to the immigration minus the emigration. The fourth equation is the migration equation, which states that the change in the migration is equal to the difference between the immigration and the emigration. The model is solved by the method of undetermined coefficients. The steady state values of the variables are found by setting the change in the variables equal to zero. The stability of the steady state is determined by the eigenvalues of the Jacobian matrix. The model shows that the economy converges to a steady state where the capital stock, the labor force, and the migration are constant. The steady state values of the variables are determined by the parameters of the model. The model also shows that the economy is stable around the steady state.

common to both. It is safe to say that two classes of men never work together without coming to think better of each other. The Transvaal civil servant was the target of almost as much criticism and abuse as members of the I.C.S. are here. One Boer leader just before assuming office as a Minister, said in a public speech, that, of all the plagues from which the Transvaal had suffered, the plague of experts was perhaps the worst. Yet soon after he assumed office he confirmed the position of nearly if not quite all the British heads of departments under him. Most of them still retain those positions and speak of him in terms of the highest praise as a political chief. With the new ministers this was the rule, not the exception, and the reason was simple. They felt their own want of experience in technical matters. They wanted to succeed, and so like sensible men they put their prejudices in their pockets, and kept the men who knew the technical details. And before these men had worked together many weeks the mutual prejudice began to evaporate, and made room for mutual confidence and respect.

§ 8. British officials, it may be said, will not serve under Indian ministers. I can only say that several of them, and those not the least able I have met, have assured me that this would not be so. They have before their eyes the position in which British officials have served from the first under Egyptian ministers. As one of my friends in the service said, it would be a great adventure to him to throw his energies and knowledge into the task of making responsible government a reality in India. Any one, he added, could administer the village on lines worked out by men like Munro, Elphinstone, and Colvin. It is easy enough to continue the methods which they evolved and applied. To their successors of the present day is presented a new and far more delicate problem, and one calling for qualities higher than those demanded by the simpler conditions of the past.

§ 9. And while we are on this point let me notice that the one real objection brought by Nationalists against this scheme is that the I.C.S. will thwart the work of the State ministries, with the deliberate intention of bringing them to naught, and so seeming to prove their incompetence. Those who use this argument fail to see that it is fatal to any scheme of reforms. If the assumption they make is correct there is nothing before India but revolution. Believe me, it is not correct. The charges you bring against British officials

[illegible]

here, should really be directed against us, the people of England. It is we who have failed since 1858 to revise instructions which have long been obsolete. The members of the service now have their instructions, and will be found loyal to their spirit as well as their letter. I venture to predict that as they realize the nature of the new enterprise before them, they will come to glory in its pursuit. There are many unofficial Europeans, who would feel more hopeful of this adventure, if their imaginations allowed them to depict the first Indian ministers, selecting as their permanent assistants able members of the I.C.S. and of the collateral services.

LETTER XVI

LEGISLATIVE POWERS

§ 1. WE may now consider the manner in which the legislative powers of the States are to be defined. They cannot, like the executive powers, be scheduled at present. In framing a federal constitution the greatest difficulty to be faced is usually that of drawing the line between the legislative powers to be exercised by the provincial governments on the one hand, and by the national government on the other hand. The only true guide is experience, and the best way in which to evoke and crystallize that experience is the device of enabling legislation, promoted by the provincial authority, and passed into law by the central authority. It was thus that the powers of the great municipal corporations of England were built up in the nineteenth century. Cities, like Manchester, Newcastle, and Birmingham had corporations based upon charters granted centuries ago. In the first decades of the nineteenth century the introduction of steam power and the factory system caused an unprecedented growth in their populations, and created all sorts of needs which were not foreseen when the original charters were granted. Such cities, for instance, required to be drained in accordance with modern sanitary science. This involved an interference with private rights and a power to raise loans, which was not within the existing powers of the town council. In order to obtain these powers, the council would present a petition to Parliament in the form of a private Bill, in the clauses of which were defined all the necessary powers of expropriation, of making by-laws, and of raising loans. Such Bills,

LETTER XVI

LEGISLATIVE POWERS

§ 1. WE may now consider the manner in which the legislative powers of the States are to be defined. They cannot, like the executive powers, be scheduled at present. In framing a federal constitution the greatest difficulty to be faced is usually that of drawing the line between the legislative powers to be exercised by the provincial governments on the one hand, and by the national government on the other hand. The only true guide is experience, and the best way in which to evoke and crystallize that experience is the device of enabling legislation, promoted by the provincial authority, and passed into law by the central authority. It was thus that the powers of the great municipal corporations of England were built up in the nineteenth century. Cities, like Manchester, Newcastle, and Birmingham had corporations based upon charters granted centuries ago. In the first decades of the nineteenth century the introduction of steam power and the factory system caused an unprecedented growth in their populations, and created all sorts of needs which were not foreseen when the original charters were granted. Such cities, for instance, required to be drained in accordance with modern sanitary science. This involved an interference with private rights and a power to raise loans, which was not within the existing powers of the town council. In order to obtain these powers, the council would present a petition to Parliament in the form of a private Bill, in the clauses of which were defined all the necessary powers of expropriation, of making by-laws, and of raising loans. Such Bills,

after passing their first and second readings as a matter of course, were then referred to a standing committee appointed to deal with all measures of this class. The corporation was represented before the committee by counsel. Opponents of the measure would appear in the same way. Government departments would also be represented. Evidence would be heard for and against the Bill as a whole, and also with reference to its various provisions. The committee would then report whether the Bill ought to be passed, and, if so, with what amendment of its original terms. The committee's report was practically decisive and was accepted by Parliament. In this way the corporations obtained enabling legislation based on an experience of their actual needs and adapted thereto by an accurate and searching inquiry into the subject-matter to which each measure related.

§ 2. Then came the period when the multifarious results of such legislation all over the country were reviewed by the Local Government Board, and consolidated into one Municipal Corporations Bill, which, when passed by Parliament, applied to all the great corporations alike. The powers, and especially the legislative powers appropriate to States, might well be worked out by some such process. And in doing so India might loose the heaviest fetters in which she has bound herself.

§ 3. I have often heard it said that, before Indians ask for political powers, they ought first to devote themselves to the task of social reform. If Englishmen will think of the social reforms effected in their own country, they will realize how unfair and impossible a condition this is. What great social reform has ever been effected in England without legislative action? How could the employment of women and children in industries and mines, the status of married women, or the sale of liquor, have been reformed without the enactment of a new law?

§ 4. In India the need for social reform largely arises from customs which have been crystallized by decisions in the courts, under the rigid legal system which we ourselves introduced from the West. The possibility of improving custom by custom has been checked in the process. But the necessary corrective, a legislature which could alter the binding effect of legal decisions, has been largely wanting in India. Before the government will consent to alter the social law by statute, the reformer has been asked to convince the government that he is backed by 'an over-

§ 4. In India the need for social reform largely arises from customs which have been crystallized by decisions in the courts, under the rigid legal system which we ourselves introduced from the West. The possibility of improving custom by custom has been checked in the process. But the necessary corrective, a legislature which could alter the binding effect of legal decisions, has been largely wanting in India. Before the government will consent to alter the social law by statute, the reformer has been asked to convince the government that he is backed by 'an over-

whelming demand' of public opinion. At present the means of showing that such a demand exists are wanting. On the other hand, the forces of reaction have every opportunity of convincing the government that a change in the law will be followed by serious trouble. A desire to avoid trouble has become a dominant motive of government in India. The social results are deplorable. In the Transvaal the marriage of a negro with a European woman, that is to say, between two castes, is contrary to law. In England I have often heard South Africa branded as the one country beneath the British flag in which marriage between any two sections of British subjects was forbidden. What was my surprise then, on coming to India, to find that under the law of that country no legal marriage between members of two different castes could be solemnized!

§ 5. On glancing through the records of the Imperial Legislative Council for the year 1912, I came across a Bill moved by Mr. Bhupendra Nath Basu to allow civil marriage between members of different castes. The Bill, it seems, came to no more than this, that people might avail themselves of the Special Marriage Act of 1872 (which seems to provide for civil marriage) *without first declaring 'that they profess no known religion in India'*. With one exception, the debate was conducted exclusively by Indian members. That exception was the Home Member, who bluntly announced that, until the mover could show that there was an overwhelming preponderance of opinion in favour of the change, government would oppose his measure. Mr. Gokhale pleaded in vain that the Bill might be allowed to go to a Select Committee upon which official members were in the majority. The mover, after replying, was supported by ten other members.¹

With the majority against him, the whole corps of British officials were ordered by the Governor-General and his council to march into the lobby and vote the measure down. So far as the British Government was concerned it might not even pass to be considered by a select committee before it was rejected.

§ 6. Let Englishmen ask themselves what great social reform could have passed in their own country, subject to

the condition that its promoters must, in some undefined way, show an overwhelming majority in favour of the measure before the government would permit it to pass. Some reason might be found for requiring an overwhelming majority in the case of a reform like the total prohibition of liquor, which means depriving individuals of a freedom they already possess. But the case in question is one exactly opposite to this. As things are, two members of one religion, if belonging to two different castes, of which there are thousands, cannot contract a legal marriage without a formal and public renunciation of their religion. It is not enough for government that their religious organizations have ample powers of excommunication. A couple effecting such a marriage would, as a matter of course, be outcasted, just as divorced Catholics upon remarriage might be excommunicated by their church. In India such persons must themselves formally renounce their belief in their own religion before the State will extend to them the rights of civil marriage. A more flagrant interference with the liberty of conscience it is difficult to conceive. But government will not permit its removal until it can be shown that 'an overwhelming' preponderance of public opinion is in favour of the change. An overwhelming majority of Hindus must be shown to have consented, before two of them may contract a civil marriage without first renouncing their religion. What business has government to enforce the ordinances of the church against the enjoyment of civil rights? It is for a religion to enforce its own ordinances by its own sanctions, which in India are of the most powerful kind. And, as I have said already, no means are given to the reformer for testing public opinion.

§ 7. The attitude of Government in India on these subjects confronts social reformers with obstacles which are heart-breaking. Their feelings may be judged by the following extract from an article by Mr. H. U. Divatia, M.A., LL.B., in the Bombay *Political Reformer* :

While it must be said to the credit of the British administrators of India in the 'sixties and 'eighties of the last century that they were sincere and eager to help the educated minority in their struggle to be free from what they believed to be unjustified social and religious trammels by permissive legislation, the same cannot be said of latter-day administrators who have betrayed an utter want of sympathy with the ideals of educated India and have shown themselves very reluctant to yield to the demands of educated

§ 7. The attitude of Government in India on these subjects confronts social reformers with obstacles which are heart-breaking. Their feelings may be judged by the following extract from an article by Mr. H. U. Divatia, M.A., LL.B., in the Bombay *Political Reformer* :

While it must be said to the credit of the British administrators of India in the 'sixties and 'eighties of the last century that they were sincere and eager to help the educated minority in their struggle to be free from what they believed to be unjustified social and religious trammels by permissive legislation, the same cannot be said of latter-day administrators who have betrayed an utter want of sympathy with the ideals of educated India and have shown themselves very reluctant to yield to the demands of educated

Indians for further permissive measures, with the growth and change of public opinion. Witness, for example, the position of the government towards the Minor Girls Protection Bill of the Hon'ble Mr. M. B. Dadabhoy. With the growth of education and progressive ideals in the country, the demand of social reformers for permissive legislative measures is bound to be more frequent and insistent, and the government would certainly be ill-advised if its dislike towards the aspirations of educated India were allowed to come in the way of social reform legislation, about the necessity of which the intelligent classes of the people themselves are the best judges. There are many rules of the Hindu Law in the domain of marriage, inheritance, joint family, stridhan, guardianship, maintenance, &c., which are found to be antiquated and unsuitable to the present stage of Hindu society, and it is by means of state interference only that reforms in this direction can be achieved. The demand must, indeed, come from the educated classes, but the government should not adopt an indifferent attitude and bar the way of social progress. Some of the other demands for legislation on social reform questions are as follows: (1) Free and compulsory primary education as preparing, among other things, a ground for the promotion and spread of social reform schemes; (2) legislation for the protection of minor girls. A Hindu Marriage Act declaring the marriages between the different castes and sub-castes of Hindus permissible and legal; (3) raising the age of consent to 14 or, if possible, to 16 years. This list is not exhaustive, but it represents some of the principal and pressing problems of the day, and it is hoped that government will boldly encourage a policy of social progress and give effect to the articulate voice of educated India.

§ 8. Government is not really standing apart from the struggle between conservatism and reform in India. As things are, the dead weight of governmental inaction is left to rest in the scale of conservatism against reform. In practice government can only cease from this negative intervention by creating Indian electorates, and leaving their representatives to assume the burden of social reform; and this, I suggest, can be done in the most cautious way possible.

§ 9. A Nationalist leader asked me how the matter would work out under the proposals I am now making. And he pointed his question by suggesting an instance. There are, as he told me, a number of endowments left for specific purposes connected with temples. But no machinery exists for ascertaining whether the funds are actually applied to the purposes intended by the original donor. Under these circumstances, I suggested, the reformer would inaugurate a movement in favour of application by his State Government for powers to deal with the matter.

Indians for further permissive measures, with the growth and change of public opinion. § 9. A Nationalist leader asked me how the matter would work out under the proposals I am now making. And he pointed his question by suggesting an instance. There are, as he told me, a number of endowments left for specific purposes connected with temples. But no machinery exists for ascertaining whether the funds are actually applied to the purposes intended by the original donor. Under these circumstances, I suggested, the reformer would inaugurate a movement in favour of application by his State Government for powers to deal with the matter.

A motion would be moved in the assembly in favour of applying for such powers, and there the whole question would be publicly ventilated. If and when the motion was carried, ministers would then frame a petition to the provincial government in the form of an enabling Bill, defining the limits within which the assembly might legislate on the subject. The Bill would come before the provincial legislature, where the subject would again be discussed, and the Bill might then be referred to a committee. The State government would appear before the committee by counsel. So would the trustees of the endowments, and any other parties concerned to support or oppose the measure. Evidence would be taken on questions of fact, and, in the process, the whole subject would be elucidated from top to bottom. The committee would then report, giving their opinion whether the Bill should be passed; if so, with what amendments; and whether the other States of the province should be allowed to adopt its provisions. Upon this report the provincial government would act within their discretion, with the fullest possible information before them. The Bill would be negatived, or passed with or without amendment. But, if passed, the enabling Act would define with precision the limits within which the State assembly could legislate on the subject. It would then be the business of the courts to decide whether any measure passed by the assembly, and any action taken thereunder by ministers, came within the powers defined by the Act. But the enabling Act itself would effect no change in the social law. The actual change would be effected by subsequent legislation passed by the assembly, a representative body, within the limits of the powers provided by the enabling Act.

§ 10. Let us now take the more serious case instanced above, that of the marriage law. Suppose that a State applied for powers to legislate on the subject, opponents of the measure might argue that the law of marriage was not a provincial but a national question, and ought to be reserved to the Indian legislature. They could point with force to the confusion which has arisen in America, by reason of the fact that the law of marriage was left, under the constitution, to the States. Counsel in charge of the enabling Bill might reply that, under the American constitution, Congress is forbidden to touch the subject. It has no over-riding power of legislation whereby to harmonize the marriage laws of the forty-eight States. In India it is not proposed to deprive the central legislature of power to deal

A motion would be moved in the assembly in favour of applying for such powers, and there the whole question would be publicly ventilated. If and when the motion was carried, ministers would then frame a petition to the provincial government in the form of an enabling Bill, defining the limits within which the assembly might legislate on the subject. The Bill would come before the provincial legislature, where the subject would again be discussed, and the Bill might then be referred to a committee. The State government would appear before the committee by counsel. So would the trustees of the endowments, and any other parties concerned to support or oppose the measure. Evidence would be taken on questions of fact, and, in the process, the whole subject would be elucidated from top to bottom. The committee would then report, giving their opinion whether the Bill should be passed; if so, with what amendments; and whether the other States of the province should be allowed to adopt its provisions. Upon this report the provincial government would act within their discretion, with the fullest possible information before them. The Bill would be negatived, or passed with or without amendment. But, if passed, the enabling Act would define with precision the limits within which the State assembly could legislate on the subject. It would then be the business of the courts to decide whether any measure passed by the assembly, and any action taken thereunder by ministers, came within the powers defined by the Act. But the enabling Act itself would effect no change in the social law. The actual change would be effected by subsequent legislation passed by the assembly, a representative body, within the limits of the powers provided by the enabling Act.

§ 10. Let us now take the more serious case instanced above, that of the marriage law. Suppose that a State applied for powers to legislate on the subject, opponents of the measure might argue that the law of marriage was not a provincial but a national question, and ought to be reserved to the Indian legislature. They could point with force to the confusion which has arisen in America, by reason of the fact that the law of marriage was left, under the constitution, to the States. Counsel in charge of the enabling Bill might reply that, under the American constitution, Congress is forbidden to touch the subject. It has no over-riding power of legislation whereby to harmonize the marriage laws of the forty-eight States. In India it is not proposed to deprive the central legislature of power to deal

with the subject. Such powers might therefore well be conceded to the States, so that each might be free to liberalize the law within its own jurisdiction. Later on, when public opinion had expressed itself through the action of various assemblies, the central government would be free to review the situation, and introduce a statute harmonizing marriage law for the whole of British India.

§ 11. With these arguments before it, the provincial government, which is but a branch of the Government of India, and under its orders, would be able to decide whether the powers sought were such as a State government could properly exercise, or whether they ought to be reserved absolutely to the Indian legislature.

§ 12. By the use of this method, State governments could also be encouraged to devise and suggest new sources of revenue for themselves. Ministers might think that revenue could be raised by a stamp on patent medicines sold within their jurisdiction, and submit the proposal to the assembly. That body, having approved of the principle, would instruct the ministry to apply for enabling powers to the government of the province. The ministry would then frame an enabling Bill for submission to that Government, which would, of course, be fully informed as to the views of the Government of India. The arguments of the ministry and of the interests affected would be heard, and the enabling Bill would either be rejected, or passed with or without amendments. But if passed, it would constitute a permanent addition to the powers of the State. Within those powers, as defined by the Provincial Act, the ministry would proceed to frame a taxing measure of their own, which, when passed by the assembly, would come into law. If the results, when tested by experience, proved satisfactory, the powers of the enabling Act might then be extended to all the others, to be exercised or not, as might be determined by their own discretion.

§ 13. Thus, in the course of years, by the fullest public inquiry and by actual experiment, the powers, which a State needs and is capable of exercising, would be worked out. Whenever the time arrived for summoning a convention to frame a constitution, under which the Government of India would come to be responsible to an Indian parliament and electorate, that convention would have before it ample materials for determining what powers should finally vest in the State governments, as distinguished from those which would have to be reserved to the parliament of India.

with the subject. Such powers might therefore well be conceded to the States, so that each might be free to liberalize the law within its own jurisdiction. Later on, when public opinion had expressed itself through the action of various assemblies, the central government would be free to review the situation, and introduce a statute harmonizing marriage law for the whole of British India.

§ 11. With these arguments before it, the provincial government, which is but a branch of the Government of India, and under its orders, would be able to decide whether the powers sought were such as a State government could properly exercise, or whether they ought to be reserved absolutely to the Indian legislature.

§ 12. By the use of this method, State governments could also be encouraged to devise and suggest new sources of revenue for themselves. Ministers might think that revenue could be raised by a stamp on patent medicines sold within their jurisdiction, and submit the proposal to the assembly. That body, having approved of the principle, would instruct the ministry to apply for enabling powers to the government of the province. The ministry would then frame an enabling Bill for submission to that Government, which would, of course, be fully informed as to the views of the Government of India. The arguments of the ministry and of the interests affected would be heard, and the enabling Bill would either be rejected, or passed with or without amendments. But if passed, it would constitute a permanent addition to the powers of the State. Within those powers, as defined by the Provincial Act, the ministry would proceed to frame a taxing measure of their own, which, when passed by the assembly, would come into law. If the results, when tested by experience, proved satisfactory, the powers of the enabling Act might then be extended to all the others, to be exercised or not, as might be determined by their own discretion.

§ 13. Thus, in the course of years, by the fullest public inquiry and by actual experiment, the powers, which a State needs and is capable of exercising, would be worked out. Whenever the time arrived for summoning a convention to frame a constitution, under which the Government of India would come to be responsible to an Indian parliament and electorate, that convention would have before it ample materials for determining what powers should finally vest in the State governments, as distinguished from those which would have to be reserved to the parliament of India.

LETTER XVII

CO-RELATION OF PROVINCIAL AND STATE GOVERNMENTS

§ 1. The character and working of the new system proposed has now been outlined with sufficient clearness to enable us to consider what changes should also be made in the structure of the existing governments of the provinces.

§ 2. I take it, as a matter of course, that half the executive councils would be Indian. But these Indians, I would urge, should be promoted officials. The popular leaders will all be wanted for the State ministries, and the great corps of Indian officials should be encouraged by having these posts opened to them. In the terms of their appointment, I would make it emphatically clear that the Indian members of council hold office on exactly the same tenure as their colleagues, and are, like them, responsible to the Secretary of State. Each member of council, moreover, should have an alternate to take his place automatically in case of illness or absence.

§ 3. The governor, I suggest, should, if possible, be a man who has served as governor of a self-governing colony. One of the greatest difficulties to be faced in the transition stage is the absence of knowledge which exists amongst all classes in India of the meaning and practice of responsible government. It is vital that the heads of the old provinces, who will largely control the transition, should bring such experience from outside. Of experience in the technique of Indian government they will find an ample supply on the spot. But something ought also to be done to provide members of the Indian civil service with the experience which their present position denies them. The Imperial Government might with advantage arrange that, in future, the private secretaries of colonial governors should be seconded from the junior ranks of the Indian civil service. Such men would return to India with ideals other than those which their present training provides. It is not less important that in future colonial governors should be drawn from the senior members of the Indian civil service. They would thus get an actual experience of the working of responsible government, and could then be drafted back to act as the chief commissioners of States in India. The self-governing colonies would, I believe, if properly

approached on the subject, welcome the chance of offering themselves as a training-ground for those who are to superintend the extension to India of the system under which they have thrived. The arrangement would help to create a new and better understanding between the different parts of the Commonwealth.

§ 4. In considering the reform of the legislative councils of the old provinces, it is well to hold in mind that, under the system proposed, they would be organs of government which are vanishing quantities. The present governments of the provinces will continue to exist only as trustees of residuary powers to be handed over as rapidly as possible to the elective governments of the States, or, finally, to the Government of India, when it becomes answerable to an Indian electorate. It would exist to maintain order in the period of transition, and whenever the States are ready to assume that basic function it would vanish. In the meantime it cannot be too clear that, in the discharge of its temporary functions, the government of the province is responsible to the Secretary of State, and has all the powers necessary for discharging the duties laid upon it. But in doing so it should be exposed as strongly as possible to the influence of Indian opinion. In all its executive acts, and in any legislation which it may find it necessary to pass, it should be exposed to the fullest criticisms of an Indian assembly. In order to meet these conditions, the governor-in-council should legislate by ordinance. But the draft of every ordinance, and the estimates in draft, should come before a provincial council composed mainly of delegations from the States, together with some non-official members appointed by government. The official voters would disappear from the council altogether. The government would be represented in debate by the members of the executive council and their alternates. Seven or eight spokesmen are amply sufficient for the conduct of debate. But the officials should not vote. The council should be free to discuss and pass any recommendations it chose, whether on matters of principle or detail. The final action of government, whether in legislation or in the allocation of public funds, would only be taken in the light of such recommendations; but the power of final decision would rest with the government. The enabling Bills of the States, for instance, would all come before the council; but government would nominate a majority on the committee to which such Bills were referred, leaving the council to elect the minority.

approached on the subject, welcome the chance of offering themselves as a training-ground for those who are to superintend the extension to India of the system under which they have thrived. § 4. In considering the reform of the legislative councils of the old provinces, it is well to hold in mind that, under the system proposed, they would be organs of government which are vanishing quantities. The present governments of the provinces will continue to exist only as trustees of residuary powers to be handed over as rapidly as possible to the elective governments of the States, or, finally, to the Government of India, when it becomes answerable to an Indian electorate. It would exist to maintain order in the period of transition, and whenever the States are ready to assume that basic function it would vanish. In the meantime it cannot be too clear that, in the discharge of its temporary functions, the government of the province is responsible to the Secretary of State, and has all the powers necessary for discharging the duties laid upon it. But in doing so it should be exposed as strongly as possible to the influence of Indian opinion. In all its executive acts, and in any legislation which it may find it necessary to pass, it should be exposed to the fullest criticisms of an Indian assembly. In order to meet these conditions, the governor-in-council should legislate by ordinance. But the draft of every ordinance, and the estimates in draft, should come before a provincial council composed mainly of delegations from the States, together with some non-official members appointed by government. The official voters would disappear from the council altogether. The government would be represented in debate by the members of the executive council and their alternates. Seven or eight spokesmen are amply sufficient for the conduct of debate. But the officials should not vote. The council should be free to discuss and pass any recommendations it chose, whether on matters of principle or detail. The final action of government, whether in legislation or in the allocation of public funds, would only be taken in the light of such recommendations; but the power of final decision would rest with the government. The enabling Bills of the States, for instance, would all come before the council; but government would nominate a majority on the committee to which such Bills were referred, leaving the council to elect the minority.

The council formed of delegations from the State assemblies would constitute an important link between their governments and that of the province, until it had disappeared.

§ 5. Whatever powers are conceded from time to time to State governments, I would strongly urge that they should be conceded outright, subject to the power of veto on legislation, which, in the transition stage, should be exercised by the provincial government, not by the chief commissioner. The latter should be protected, as far as possible, from occasions for friction with ministers. The Provincial State governments will be kept within their statutory powers by the action of the courts, which would be competent to decide whether any legislative provision or executive action was *ultra vires*.

§ 6. Friction there will be under this or any other scheme. There is serious friction at present between the official and elective members of the legislative councils. Under some of the schemes proposed the friction would be such as would certainly burst into flames. The scheme proposed in the Joint Address aims at developing a feeling of responsibility in electorates by making ministers and assemblies directly answerable to them for definite duties, and that this responsibility may be clear, as well as to reduce friction, it is proposed that the electorates should have separate officers and revenues of their own. But even so the separation will still be imperfect. Government is one, and all its functions are interconnected; though to say that they cannot be separated enough for the purpose of delegation to different authorities is contrary to facts before our eyes.

§ 7. Let us take an example which has often been raised in the course of the last few weeks. The police controlled by the provincial government are convinced that sedition is being taught in a school controlled by the State ministry. They ask ministers to take such action as is taken at present. Ministers refuse, and a deadlock occurs.

§ 8. In passing, let us notice that exactly the same position can arise if district and municipal boards are given real control over schools. But leaving that aside, it is not difficult to suggest provisions whereby difficulties of this kind can be overcome. It might be provided, for instance, that all such matters should be raised in the first instance with the ministry, by the department, and not by the governor-in-council. If the ministry and department cannot agree, then let the case be remitted to a joint session of executive councillors and ministers in equal numbers,

The council formed of delegations from the State assemblies would constitute an important link between their governments and that of the province, until it had disappeared.

§ 5. Whatever powers are conceded from time to time to State governments, I would strongly urge that they should be conceded outright, subject to the power of veto on legislation, which, in the transition stage, should be exercised by the provincial government, not by the chief commissioner. The latter should be protected, as far as possible, from occasions for friction with ministers. The Provincial State governments will be kept within their statutory powers by the action of the courts, which would be competent to decide whether any legislative provision or executive action was *ultra vires*.

§ 6. Friction there will be under this or any other scheme. There is serious friction at present between the official and elective members of the legislative councils. Under some of the schemes proposed the friction would be such as would certainly burst into flames. The scheme proposed in the Joint Address aims at developing a feeling of responsibility in electorates by making ministers and assemblies directly answerable to them for definite duties, and that this responsibility may be clear, as well as to reduce friction, it is proposed that the electorates should have separate officers and revenues of their own. But even so the separation will still be imperfect. Government is one, and all its functions are interconnected; though to say that they cannot be separated enough for the purpose of delegation to different authorities is contrary to facts before our eyes.

§ 7. Let us take an example which has often been raised in the course of the last few weeks. The police controlled by the provincial government are convinced that sedition is being taught in a school controlled by the State ministry. They ask ministers to take such action as is taken at present. Ministers refuse, and a deadlock occurs.

§ 8. In passing, let us notice that exactly the same position can arise if district and municipal boards are given real control over schools. But leaving that aside, it is not difficult to suggest provisions whereby difficulties of this kind can be overcome. It might be provided, for instance, that all such matters should be raised in the first instance with the ministry, by the department, and not by the governor-in-council. If the ministry and department cannot agree, then let the case be remitted to a joint session of executive councillors and ministers in equal numbers,

sitting together as a board of conciliation, under the chairmanship of the governor, who should not vote or take sides unless called upon to do so as umpire. If the joint meeting fail to agree to an order, then let an order be made by the governor. The sovereign specific for friction is to have some machinery for settling questions. Open questions are open sores.

LETTER XVIII

FINANCE AND CONTROL

§ 1. As a scheme for developing responsible government, the success or failure of the plan suggested in the Joint Address, would, I believe, largely depend upon the procedure whereby the transfer of fresh powers and revenues to the State governments is to be effected. To start with, the States must have their full share of the revenues, that is to say, a share equivalent to what has been spent on the functions assigned them in past years, and this share must grow with the general growth of the provincial revenues. But the basic facts of Indian finance are these. For the last century the British Government has steadily reduced the proportion of unearned increment from land due to the public treasury. Hence the failure of that government to break down illiteracy in India. Crores and crores of rupees are necessary for that purpose, but they can only be raised by governments responsible to the people themselves. It is in facing that burden of self-taxation, and by no other means, that the people of India will achieve responsible government. The newspaper *Sanjivani* raises its hands in horror at the proposal: 'This plan of leaving to Provincial (State) governments certain specific powers of taxation would make such governments unpopular.'¹ This is perfectly true, and many governments will perish in the process, until at length the electorates have learned that no ministers can remain responsible to them for discharging their orders except in so far as they make themselves responsible to ministers for discharging the cost. Responsibility is always two-edged. The whole virtue of the system is that it brings home the elementary lesson that men can only reap as they have sown: and that way lies the making of men. The pace at which India will travel towards the

final goal will mainly depend upon how soon this difficult lesson of self-taxation is learned.

§ 2. Hence the importance of periodic settlements of standing revenues. The States must be given an ample share of revenue at the outset. But if the question of increasing that share is left open from year to year, it is human nature that ministers should direct all their energies to obtaining more funds from the provincial government, for the extension of their services, instead of facing the unpopular expedient of fresh taxation. The energies of the new bodies will be spent in a chronic squabble with the old. The only remedy is for Parliament, or its agent the Secretary of State, to settle the matter on the advice of commissioners reporting direct to itself for a period of years, revising the settlement by the same method at the end of that period. It is not fair to leave the onus on the Government of India and its provincial governments. In dividing the revenues between themselves and the popular governments they cannot escape the charge of loading the dice. But if every seven years the settlement is revised by an impartial authority reporting direct to the Secretary of State, governments of each type will then know what they have to spend, and each will realize that fresh taxation must be faced if it wishes to increase its programme. I say, without fear of contradiction, that neither this nor any other government in India will break down illiteracy which will not face fresh taxation.

§ 3. The finances of the State government should be subject to audit by an officer appointed by the provincial government, whose reports should be published. On questions of extravagance or of expenditure made without proper authority, the auditor would report to the committee of public accounts appointed by the assembly. The auditor should have full powers of holding an inquiry wherever he sees traces of corruption. The provincial government might have power to bring delinquents to trial, in default of action taken by the ministry. The auditor would have power to disallow expenditure which was *ultra vires*; but a power of remitting a surcharge should vest in the provincial government.

§ 4. The borrowing of money would of course require the sanction of the provincial government, but otherwise I would urge that all sanctions in detail should be avoided. The necessity of obtaining sanctions in detail is a certain cause of friction. Let the new authorities be given a per-

Abstract

Abstract

Abstract

Abstract

final goal will mainly depend upon how soon this difficult lesson of self-taxation is learned.

§ 2. Hence the importance of periodic settlements of standing revenues. The States must be given an ample share of revenue at the outset. But if the question of increasing that share is left open from year to year, it is human nature that ministers should direct all their energies to obtaining more funds from the provincial government, for the extension of their services, instead of facing the unpopular expedient of fresh taxation. The energies of the new bodies will be spent in a chronic squabble with the old. The only remedy is for Parliament, or its agent the Secretary of State, to settle the matter on the advice of commissioners reporting direct to itself for a period of years, revising the settlement by the same method at the end of that period. It is not fair to leave the onus on the Government of India and its provincial governments. In dividing the revenues between themselves and the popular governments they cannot escape the charge of loading the dice. But if every seven years the settlement is revised by an impartial authority reporting direct to the Secretary of State, governments of each type will then know what they have to spend, and each will realize that fresh taxation must be faced if it wishes to increase its programme. I say, without fear of contradiction, that neither this nor any other government in India will break down illiteracy which will not face fresh taxation.

§ 3. The finances of the State government should be subject to audit by an officer appointed by the provincial government, whose reports should be published. On questions of extravagance or of expenditure made without proper authority, the auditor would report to the committee of public accounts appointed by the assembly. The auditor should have full powers of holding an inquiry wherever he sees traces of corruption. The provincial government might have power to bring delinquents to trial, in default of action taken by the ministry. The auditor would have power to disallow expenditure which was *ultra vires*; but a power of remitting a surcharge should vest in the provincial government.

§ 4. The borrowing of money would of course require the sanction of the provincial government, but otherwise I would urge that all sanctions in detail should be avoided. The necessity of obtaining sanctions in detail is a certain cause of friction. Let the new authorities be given a per-

fectly free hand, within the powers conferred upon them, if only that the responsibility which rests upon them may be perfectly clear to their electors. For details, let government rely on the influence of the chief commissioner with his ministers. Let the one check be a power of total suspension in cases where a State government has clearly and absolutely failed in the duties imposed on them. If a ministry so misuses the powers with which it is charged as to produce disorder, the government, upon which rests the final duty of maintaining order, must have a power of suspending the delinquent authority and of acting in its place. But in such cases the chief commissioner should always change places with one in another State. He should never be exposed to the charge of aiming at personal rule. Summary suspension would of course require the sanction of the Government of India, subject to confirmation by the Secretary of State, and would only take place in the event of public disorder due to the action of the State government.

§ 5. It should be settled, I suggest, at the outset, that, after seven years' trial of the system, a commission should be appointed by the Secretary of State to examine its results. The commission should include men who had served as governors of self-governing colonies and of Crown colonies. The commissioners should be asked to examine the record of each State, and advise whether further powers should be transferred to it, and, if so, what those powers should be. In the case of any State which had utterly failed in its task, it would be open to the commission to advise a reduction of powers, or else total suspension. Responsible government will progress far more quickly if administrations saturated with corruption, or paralysed by inertia, are suspended, as those of Native States have been under similar circumstances. The old government would then step in, to purify and reinvigorate the administration, until conditions seemed ripe for a further essay in responsible government. But, except in the case of public disorder, such suspension should only take place on the recommendation of such a commission as that suggested above.

§ 6. I believe this power of suspension, if made a reality, will do more than anything to accelerate progress towards responsible government, because it will embolden Parliament and Secretaries of State to insist on a free extension of further powers to States which are showing a real capacity for self-government. The most paralysing influence in

But, except in the case of public disorder, such suspension should only take place on the recommendation of such a commission as that suggested above.

§ 6. I believe this power of suspension, if made a reality, will do more than anything to accelerate progress towards responsible government, because it will embolden Parliament and Secretaries of State to insist on a free extension of further powers to States which are showing a real capacity for self-government. The most paralysing influence in

India at present is the conscious weakness of government. It is taken as an axiom that no forward step can ever be retraced. The inevitable result is that government shrinks from any forward step, or deliberates so long that the step is obsolete when taken. These timid advances, moreover, afford too little scope for latitude in the various provinces of this diverse country. The reforms suggested are too rigid and too uniform for the multifarious conditions. The secret of rapid progress is, wherever a community shows capacity for progress, to enable it to move forward as quickly as it can. To do this government must make experiments, and proceed by trial ; but it is useless to talk of experiments, unless you are prepared to retreat where failure is ascertained, as well as to advance where success is proved. There would be more than twenty States in India. It is greatly to be hoped that at the end of seven years a marked addition could be made to the powers of many of them. No general unrest would be caused by suspending an egregious failure which was casting discredit on all the rest. And each of these governments would always have fresh prizes before it to be gained, until the final reward of complete responsible government had been reached. The principle of specific delegation gives all the elasticity which is wanting in the various schemes so far suggested.

§ 7. The powers of the States would thus be built up in two separate ways. The known executive functions of provincial governments would be scheduled. To begin with, an instalment of those powers would be entrusted to States, and every seven years the question of transferring further powers would be deliberately considered in the light of the record achieved by each electoral authority.

Side by side with this periodic transfer would go on a continuous transfer of new legislative powers, sought, as the need might be felt, by the States from the old provincial governments acting as the agents of the Government of India. The limits of those powers would all be defined with accuracy in the terms of enabling Acts. From time to time the Government of India would review these local Acts, and generalize their contents into laws applying to all the States, the general Acts repealing and taking the place of local Acts. In this manner would be gradually built up the constitution of a self-governing India, on the one solid foundation of experience.

LETTER XIX

CONCLUSION

§ 1. IN conclusion I desire to affirm once more the conviction which underlies the whole of these detailed suggestions. The backward and defective state of education in India is a reproach to the British administration which must be wiped out. An improvement and extension of teaching in all its branches is a vital necessity. But that of itself will not avail to prepare Indians for the task of responsible government. On the contrary, it will prove to be a danger and positive mischief, unless accompanied by a definite instalment of political responsibility. It is in the workshop of actual experience alone that electorates will acquire the art of self-government, however highly educated they may be.

§ 2. There must, I urge, be a devolution of definite powers on electorates. The officers of government must give every possible help and advice to the new authorities, for which those authorities may ask. They must act as their foster-mothers, not as their step-mothers. But if the new authorities are to learn the art of responsible government, they must be free from control from above. Not otherwise will they learn to feel themselves responsible to the electorates below. Nor will the electorates themselves learn that the remedy for their sufferings rests in their own hands. Suffering there will be, and it is only by suffering, self-inflicted and perhaps long endured, that a people will learn the faculty of self-help, and genuine electorates be brought into being. The control to which the district boards have been subject has, in my judgement, almost destroyed the benefit of the experiment inaugurated by Lord Ripon.

§ 3. I am proud to think that England has conferred immeasurable good on India by creating order and showing Indians what orderly government means. But this having been done, I do not believe the system can now be continued as it is, without positive damage to the character of the people. The burden of trusteeship must be transferred, piece by piece, from the shoulders of Englishmen to those of Indians in some sort able to bear it. Their strength and numbers must be developed. But that can only be done by the exercise of actual responsibility, steadily increased, as they can bear it. It cannot be done by any system

of school teaching, though such teaching is an essential concomitant of the process.

§ 4. The goal now set by the recent announcement of the Secretary of State will only be reached through trouble. Yet troublous as the times before us may be, we have at last reached that stage of our work in India which is truly consonant with our own traditions. In the past our task has been that which other great Empires have accomplished. We may well be glad to feel that in our generation has begun the work of remodelling the Government of India on those principles which all free nations have borrowed from England, and which most of them have now combined to defend at immeasurable cost. No human work is perfect, but the foundations of responsible government in India have been firmly laid by our predecessors. Yet finer qualities will be needed in raising the walls; and the task is one worthy of this epoch in our history, if only because it calls for the effacement of ourselves.

INTRODUCTION TO THE ENGLISH
EDITION OF 'LETTERS TO THE
PEOPLE OF INDIA ON RESPON-
SIBLE GOVERNMENT.' (*Published in
England, May 1918.*)

§ 1. IN submitting this book to English readers it is necessary to explain the circumstances which led to its production while the Secretary of State was in India. For several years before the war I had undertaken, in conjunction with a number of friends, to study the mutual relations of the United Kingdom and the self-governing Dominions. Some results of these studies were published in 1916 in two volumes, one entitled *The Problem of the Commonwealth*, the other *The Commonwealth of Nations*. At the outset I had thought that the problem involved in the mutual relations of the self-governing peoples could be separated from the problem involved in their relations to India. The latter I imagined could be left to future generations. Further study soon convinced me that the two problems were, in fact, inseparable. They were, in truth, but different aspects of a single problem, so that any attempt to settle the one without first thinking out the other, was sure to miscarry. The war, moreover, was bound to precipitate the whole issue.

§ 2. It was clearly impossible to formulate any conclusions on the future place of India in the Commonwealth without some first-hand knowledge of the country, such as, in the case of the Dominions, I had obtained by residence in one of them and frequent visits to the others. Accordingly I came to India for that purpose in October 1916.

§ 3. When viewed on the spot, the complexity of the problem seemed greater than ever. So far as their own domestic affairs are concerned, the Dominions, like the United Kingdom, are communities which have reached a certain finality in their institutions. The mainspring of government rests once for all in their own electorates, and students of the Imperial problem have merely to consider

INTRODUCTION TO THE ENGLISH
EDITION OF 'LETTERS TO THE
PEOPLE OF INDIA ON RESPON-
SIBLE GOVERNMENT.' (*Published in
England, May 1918.*)

§ 1. IN submitting this book to English readers it is necessary to explain the circumstances which led to its production while the Secretary of State was in India. For several years before the war I had undertaken, in conjunction with a number of friends, to study the mutual relations of the United Kingdom and the self-governing Dominions. Some results of these studies were published in 1916 in two volumes, one entitled *The Problem of the Commonwealth*, the other *The Commonwealth of Nations*. At the outset I had thought that the problem involved in the mutual relations of the self-governing peoples could be separated from the problem involved in their relations to India. The latter I imagined could be left to future generations. Further study soon convinced me that the two problems were, in fact, inseparable. They were, in truth, but different aspects of a single problem, so that any attempt to settle the one without first thinking out the other, was sure to miscarry. The war, moreover, was bound to precipitate the whole issue.

§ 2. It was clearly impossible to formulate any conclusions on the future place of India in the Commonwealth without some first-hand knowledge of the country, such as, in the case of the Dominions, I had obtained by residence in one of them and frequent visits to the others. Accordingly I came to India for that purpose in October 1916.

§ 3. When viewed on the spot, the complexity of the problem seemed greater than ever. So far as their own domestic affairs are concerned, the Dominions, like the United Kingdom, are communities which have reached a certain finality in their institutions. The mainspring of government rests once for all in their own electorates, and students of the Imperial problem have merely to consider

how control of matters common to them all, of foreign affairs that is to say, and of matters inseparable therefrom, can be given to those electorates. With India it is otherwise. The mainspring of government still rests in the British electorate. It was clear to the writer that a time must come when the control of Indian affairs must be transferred from the people of the British Isles to those of India—that, indeed, a stage had already been reached when measures intended to lead to that end must be taken. India must begin to assume control of her own affairs, but could only do so by a series of steps. How long these steps would take experience alone could show, but this at least was clear, that India was entering upon a period of constitutional transition and that the adjustment of her place in the Commonwealth must somehow or other be made to keep pace with her progress. The question how Indians could be given a voice in the issues of peace and war, and in bearing the burdens inseparable therefrom, was closely bound up with the question how far and how quickly Indians could be brought to assume control of their own domestic affairs. The first could only be treated in the light of the second.

§ 4. As Mr. Lovat Fraser observed, the information compiled, printed, and published by the Government of India is, perhaps, in proportion to its immense volume, the least illuminating in the world. To a great extent, therefore, the inquirer must gather his facts for himself. But as India contains an assortment of races who together include one-fifth of mankind, it is difficult to resist a feeling of despair, which grows at every step through the country. The conclusions of any one who cannot devote his whole life to the study may well be regarded with suspicion. And yet the place of India in the British Commonwealth is a necessary subject of inquiry. It cannot be determined by men whose knowledge is confined to India; and the point goes even deeper than that. Able men who have spent their lives in India not seldom advocate measures which show that they have lost touch with currents of opinion elsewhere, which are, after all, a dominant factor in the problem. The proposal to satisfy aspirations for self-government by dissolving British India into Native States is a case in point.

§ 5. An outsider who attempts to study the place of India in a world Commonwealth based on the principle of responsible government has therefore to do the best he can in the time at his disposal. The procedure I followed was one

how control of matters common to them all, of foreign affairs that is to say, and of matters inseparable therefrom, can be given to those electorates. With India it is otherwise. The mainspring of government still rests in the British electorate. It was clear to the writer that a time must come when the control of Indian affairs must be transferred from the people of the British Isles to those of India—that, indeed, a stage had already been reached when measures intended to lead to that end must be taken. India must begin to assume control of her own affairs, but could only do so by a series of steps. How long these steps would take experience alone could show, but this at least was clear, that India was entering upon a period of constitutional transition and that the adjustment of her place in the Commonwealth must somehow or other be made to keep pace with her progress. The question how Indians could be given a voice in the issues of peace and war, and in bearing the burdens inseparable therefrom, was closely bound up with the question how far and how quickly Indians could be brought to assume control of their own domestic affairs. The first could only be treated in the light of the second.

§ 4. As Mr. Lovat Fraser observed, the information compiled, printed, and published by the Government of India is, perhaps, in proportion to its immense volume, the least illuminating in the world. To a great extent, therefore, the inquirer must gather his facts for himself. But as India contains an assortment of races who together include one-fifth of mankind, it is difficult to resist a feeling of despair, which grows at every step through the country. The conclusions of any one who cannot devote his whole life to the study may well be regarded with suspicion. And yet the place of India in the British Commonwealth is a necessary subject of inquiry. It cannot be determined by men whose knowledge is confined to India; and the point goes even deeper than that. Able men who have spent their lives in India not seldom advocate measures which show that they have lost touch with currents of opinion elsewhere, which are, after all, a dominant factor in the problem. The proposal to satisfy aspirations for self-government by dissolving British India into Native States is a case in point.

§ 5. An outsider who attempts to study the place of India in a world Commonwealth based on the principle of responsible government has therefore to do the best he can in the time at his disposal. The procedure I followed was one

tested by long experience. Facts and opinions were collected, not merely from documents, but at first hand from those who could speak with authority on the subject. The results were then reduced to a series of studies, which were printed and circulated to several hundred officials and non-officials, both Indian and European, including, of course, those who had furnished the information. The recipients were requested to examine the statements of fact and the inferences drawn from them, and to note their criticisms on the blank pages with which the printed studies were interleaved. In this way was collected a mass of material which has still to be sifted. In India the interest taken by the educated classes in constitutional questions is intense, and the private circulation of these studies led to so many demands for further copies that they had to be reprinted and published.

§ 6. Shortly after Mr. Montagu's arrival in India I happened to be in Bengal. An artillery duel was in progress between the leading papers on both sides, and a state of feeling had developed, especially in the student classes, which was causing anxiety. Discussion was, in fact, fast degenerating into a racial controversy, in the bitter irrelevancies of which the real issues were being lost and forgotten. On both sides there were cooler heads who felt that at a moment when the whole Commonwealth was fighting for its life, no pains should be spared to promote a calmer and more friendly atmosphere, and to recall public attention to the real merits of the questions upon which Mr. Montagu had come to India in search of light. With that end in view they conceived the idea of endeavouring to formulate proposals, for submission to the Secretary of State, to which Europeans and Indians could both subscribe. At this juncture they approached me on the ground that in my notes on Indian government they had seen suggested a line of advance upon which they felt that agreement might be found. My position as one unconnected with any section in India was another reason for inviting me to act as common broker.

§ 7. In reply to these overtures my first inquiry was whether my British and Indian friends were prepared to accept the policy announced by the Secretary of State on August 20 with its necessary implications. They were all prepared to accept this condition, and a few members of both races thus found themselves standing on common ground which, however wide, it was yet possible to narrow by a further discussion of details.

Abstract

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

Abstract

[illegible][illegible]

§ 8. A series of conferences followed, the results of which are now recorded in a document which has since been known as the Joint Address. The ground covered by any project of constitutional reform in India is immensely wide, and bristles with details upon which it would be hopeless to obtain agreement amongst more signatories than could sit round one small table. It was decided, therefore, that while the whole project should be issued for public discussion, the agreement of the signatories should be limited to twelve specific points, distinguished by black type in the body of the document, and finally printed together at the end. It is necessary to add that on several important points my own personal views were not accepted. None the less I would have signed the document as it stands had I been qualified by residence in India to do so.

§ 9. The Address was published in November and at once evoked a storm of criticism from opposite quarters. This was fully foreseen by those who signed it. The Anglo-Indian press were scarcely prepared for frank acceptance of a policy which not only recognized responsible government as the goal, but contemplated a substantial step towards it in the immediate future. By the Nationalist press the pronouncement of August 20 had been hailed as the dawn of a new era. They were deeply committed, however, to a scheme published long before the pronouncement was framed, and were slow to realize that their own programme was not in harmony with the lines laid down on August 20. The goal of responsible government was gladly accepted. But not so the provision that it must be approached by successive steps, and that the Imperial Government alone must judge how and when such steps were to be taken. The authors of the Joint Address had the advantage of working with the terms of the pronouncement before them; but just because their proposals were drawn within those terms, they could scarcely hope for acceptance by those committed to positions or programmes before the pronouncement was made. They appeared, as it were, in no man's land, and so drew the fire of both sides. But this was all to the good, as the combatants, diverted to a common target, had fewer missiles for each other; and the union of some Europeans and Indians to assert the claims of a common duty to be held paramount to that which they owed to their respective races was a fact which no criticism could destroy.

§ 10. From the outset one purpose of the movement had

§ 8. A series of conferences followed, the results of which are now recorded in a document which has since been known as the Joint Address. The ground covered by any project of constitutional reform in India is immensely wide, and bristles with details upon which it would be hopeless to obtain agreement amongst more signatories than could sit round one small table. It was decided, therefore, that while the whole project should be issued for public discussion, the agreement of the signatories should be limited to twelve specific points, distinguished by black type in the body of the document, and finally printed together at the end. It is necessary to add that on several important points my own personal views were not accepted. None the less I would have signed the document as it stands had I been qualified by residence in India to do so.

§ 9. The Address was published in November and at once evoked a storm of criticism from opposite quarters. This was fully foreseen by those who signed it. The Anglo-Indian press were scarcely prepared for frank acceptance of a policy which not only recognized responsible government as the goal, but contemplated a substantial step towards it in the immediate future. By the Nationalist press the pronouncement of August 20 had been hailed as the dawn of a new era. They were deeply committed, however, to a scheme published long before the pronouncement was framed, and were slow to realize that their own programme was not in harmony with the lines laid down on August 20. The goal of responsible government was gladly accepted. But not so the provision that it must be approached by successive steps, and that the Imperial Government alone must judge how and when such steps were to be taken. The authors of the Joint Address had the advantage of working with the terms of the pronouncement before them; but just because their proposals were drawn within those terms, they could scarcely hope for acceptance by those committed to positions or programmes before the pronouncement was made. They appeared, as it were, in no man's land, and so drew the fire of both sides. But this was all to the good, as the combatants, diverted to a common target, had fewer missiles for each other; and the union of some Europeans and Indians to assert the claims of a common duty to be held paramount to that which they owed to their respective races was a fact which no criticism could destroy.

§ 10. From the outset one purpose of the movement had

been to help both sides to get off the barren discussion of each others' demerits to the merits of the case itself. With that object in view, and in that spirit, they asked me to deal with attacks made on their proposals in a series of letters to the press. It was presently felt, however, that so large a subject needed to be handled in a more comprehensive way; so I undertook at very short notice to put what I thought should be said in the form of a book. The production of this volume before the close of the year was largely due to the tireless efforts of the Baptist mission press of Calcutta. Some of the signatories guaranteed the expense, but gave me a free hand to say what I thought, they themselves, of course, remaining uncommitted to anything outside the twelve points to which they had subscribed.

§ 11. The momentous issues now before the Secretary of State will shortly be transferred to England for decision, for which reason it is desirable that these papers should be published here. They are printed as they were written in India, with some slight correction of blemishes due to the haste with which they were first produced.

§ 12. Before glancing at the letters English readers are advised to study the Congress-League scheme and the Joint Address. I have no reason whatever to suppose that the latter is destined to form the basis of any scheme which Parliament will be asked to adopt. My object in publishing these papers in England is that they may help those upon whom rests the grave responsibility of making the final decision, to a better understanding of the principles involved. For there are principles involved in the structure of governments. It is sometimes hard to remember that our bodies obey the same laws as an engine, because muscle and sinew are more elastic than steel. Human nature is infinitely more elastic. But still it works in obedience to principles which assert themselves in the end and bring to naught schemes which ignore them. There are men who cannot work institutions in themselves perfectly sound. And history proves that there are schemes of government so unsound that they will not work, even in the hands of men the most capable of freedom that the world has produced.

§ 13. The alternative lines of development open to choice in the present case are neither so various nor yet so elusive as one might suppose. The Secretary of State has been deluged with schemes; but if they were analysed they

been to help both sides to get off the barren discussion of each others' demerits to the merits of the case itself. With that object in view, and in that spirit, they asked me to deal with attacks made on their proposals in a series of letters to the press. It was presently felt, however, that so large a subject needed to be handled in a more comprehensive way; so I undertook at very short notice to put what I thought should be said in the form of a book. The production of this volume before the close of the year was largely due to the tireless efforts of the Baptist mission press of Calcutta. Some of the signatories guaranteed the expense, but gave me a free hand to say what I thought, they themselves, of course, remaining uncommitted to anything outside the twelve points to which they had subscribed.

§ 11. The momentous issues now before the Secretary of State will shortly be transferred to England for decision, for which reason it is desirable that these papers should be published here. They are printed as they were written in India, with some slight correction of blemishes due to the haste with which they were first produced.

§ 12. Before glancing at the letters English readers are advised to study the Congress-League scheme and the Joint Address. I have no reason whatever to suppose that the latter is destined to form the basis of any scheme which Parliament will be asked to adopt. My object in publishing these papers in England is that they may help those upon whom rests the grave responsibility of making the final decision, to a better understanding of the principles involved. For there are principles involved in the structure of governments. It is sometimes hard to remember that our bodies obey the same laws as an engine, because muscle and sinew are more elastic than steel. Human nature is infinitely more elastic. But still it works in obedience to principles which assert themselves in the end and bring to naught schemes which ignore them. There are men who cannot work institutions in themselves perfectly sound. And history proves that there are schemes of government so unsound that they will not work, even in the hands of men the most capable of freedom that the world has produced.

§ 13. The alternative lines of development open to choice in the present case are neither so various nor yet so elusive as one might suppose. The Secretary of State has been deluged with schemes; but if they were analysed they

would be found to be based on either or both of the two principles which underlie the Congress-League scheme on the one hand and the Joint Address on the other ; and each of these principles has a quality of its own. The one is rigid, the other is highly elastic. The Minto-Morley principle, carried to its practical conclusion, of necessity results in something closely resembling the Congress-League scheme. The Joint Address is but one way of applying the principle of specific devolution. A dozen draftsmen working on that principle might produce as many different plans for giving effect to it. These particular proposals are not submitted as offering the one key to the problem, but only because a principle of government cannot be clearly explained, nor thoroughly tested by discussion, until it is expressed in some scheme and developed in considerable detail.

§ 14. In the throes of a struggle for all that makes life worth living, the British people may well ask whether they can reasonably be called upon to consider and dispose of questions like these. And when peace is signed they may pardonably feel that the social problems of those who have borne the brunt of the struggle, have endured hunger and cold, have looked famine in the face, and have devoted their blood without measure, have still the prior claim. The naked truth is that the machinery of our institutions has long been unequal to the needs of the United Kingdom, entangled as they are with those of a Commonwealth of nations which cover a quarter of the globe. A single cabinet and parliament are expected to deal with them all. On the wharves of Westminster heaps of outstanding questions have gathered. Matters of moment lie buried and forgotten in the piles. The wheels of government would labour less if only it could deal with things before they had become intractable to treatment. For years we have all been absorbed in the tactical problems of politics. Strategic aspects have been ignored. We have gone on asking how this and that should be done, while forgetting to ask whether the existing machinery was adequate to the doing. It cannot keep pace with the claims made on it. This particular problem is a case in point. Had the pronouncement of August 20, 1917, been made two years before, coupled with a statement that the matter must rest there till after the war, the movement which compelled a visit to India by the Secretary of State in the crisis of a desperate war would never have come to a head.

§ 15. This assuredly is not the time to recast the frame-

would be found to be based on either or both of the two principles which underlie the Congress-League scheme on the one hand and the Joint Address on the other ; and each of these principles has a quality of its own. The one is rigid, the other is highly elastic. The Minto-Morley principle, carried to its practical conclusion, of necessity results in something closely resembling the Congress-League scheme. The Joint Address is but one way of applying the principle of specific devolution. A dozen draftsmen working on that principle might produce as many different plans for giving effect to it. These particular proposals are not submitted as offering the one key to the problem, but only because a principle of government cannot be clearly explained, nor thoroughly tested by discussion, until it is expressed in some scheme and developed in considerable detail.

§ 14. In the throes of a struggle for all that makes life worth living, the British people may well ask whether they can reasonably be called upon to consider and dispose of questions like these. And when peace is signed they may pardonably feel that the social problems of those who have borne the brunt of the struggle, have endured hunger and cold, have looked famine in the face, and have devoted their blood without measure, have still the prior claim. The naked truth is that the machinery of our institutions has long been unequal to the needs of the United Kingdom, entangled as they are with those of a Commonwealth of nations which cover a quarter of the globe. A single cabinet and parliament are expected to deal with them all. On the wharves of Westminster heaps of outstanding questions have gathered. Matters of moment lie buried and forgotten in the piles. The wheels of government would labour less if only it could deal with things before they had become intractable to treatment. For years we have all been absorbed in the tactical problems of politics. Strategic aspects have been ignored. We have gone on asking how this and that should be done, while forgetting to ask whether the existing machinery was adequate to the doing. It cannot keep pace with the claims made on it. This particular problem is a case in point. Had the pronouncement of August 20, 1917, been made two years before, coupled with a statement that the matter must rest there till after the war, the movement which compelled a visit to India by the Secretary of State in the crisis of a desperate war would never have come to a head.

§ 15. This assuredly is not the time to recast the frame-

work of the whole machine. Nor can the disposal of the present problem be left to await a reconstruction of the Imperial Government. It is therefore of cardinal importance to consider how Parliament and the electorate to which it is answerable can best arrive at a decision second only in gravity to those by which they began and will end this war. The decision must be theirs; Lords and Commons must find the means of examining and settling in all its aspects the proposal laid before them. The pronouncement of August 20 involves no less. The force of that momentous declaration was seriously diminished by the fact that it was merely given in answer to a question by a Secretary of State new to office. In its present form it contains the last word on British policy in India. But whatever that last word is to be, let it stand for all time, solemnly recorded as the will of the Parliament which, as things are, alone can speak for the Commonwealth at large. At least let it stand in the preamble of the Act which initiates the next step. For the Indian mind it is better that it should issue as a Royal proclamation as well, provided that behind it is the explicit endorsement of Lords and Commons. But whatever the final shape, let the whole Commonwealth know that it stands and shall stand in all its parts. India at least has need of such assurance. The most enlightened and also the most courageous of Indian papers complained that I laid an unnecessary stress on the provision that 'the British Government, and the Government of India on whom the responsibility lies for the welfare and advancement of the Indian peoples, must be judge of the time and measure of each advance'. How can too much stress be laid on a statement which includes no note of qualification, when it stands in a document so grave? Let Parliament consider whether it means these words or no; and, having considered, leave no one in doubt. Mere tacit acceptance has left India in doubt. When the goal of responsible government is achieved this condition will cease to apply. But until it is achieved it is Parliament, and Parliament only, which can decide the method and pace of each advance. Ruin to the hopes raised on August 20 will surely result from any attempt to evade the responsibility. The saving factor in the situation is the undiminished confidence which the people of India still have in the people and Parliament of England.

§ 16. It has often been said that if the Empire is destroyed it will be the British Parliament that destroys it. The

work of the whole machine. Nor can the disposal of the present problem be left to await a reconstruction of the Imperial Government. It is therefore of cardinal importance to consider how Parliament and the electorate to which it is answerable can best arrive at a decision second only in gravity to those by which they began and will end this war. The decision must be theirs; Lords and Commons must find the means of examining and settling in all its aspects the proposal laid before them. The pronouncement of August 20 involves no less. The force of that momentous declaration was seriously diminished by the fact that it was merely given in answer to a question by a Secretary of State new to office. In its present form it contains the last word on British policy in India. But whatever that last word is to be, let it stand for all time, solemnly recorded as the will of the Parliament which, as things are, alone can speak for the Commonwealth at large. At least let it stand in the preamble of the Act which initiates the next step. For the Indian mind it is better that it should issue as a Royal proclamation as well, provided that behind it is the explicit endorsement of Lords and Commons. But whatever the final shape, let the whole Commonwealth know that it stands and shall stand in all its parts. India at least has need of such assurance. The most enlightened and also the most courageous of Indian papers complained that I laid an unnecessary stress on the provision that 'the British Government, and the Government of India on whom the responsibility lies for the welfare and advancement of the Indian peoples, must be judge of the time and measure of each advance'. How can too much stress be laid on a statement which includes no note of qualification, when it stands in a document so grave? Let Parliament consider whether it means these words or no; and, having considered, leave no one in doubt. Mere tacit acceptance has left India in doubt. When the goal of responsible government is achieved this condition will cease to apply. But until it is achieved it is Parliament, and Parliament only, which can decide the method and pace of each advance. Ruin to the hopes raised on August 20 will surely result from any attempt to evade the responsibility. The saving factor in the situation is the undiminished confidence which the people of India still have in the people and Parliament of England.

§ 16. It has often been said that if the Empire is destroyed it will be the British Parliament that destroys it. The

statement is true in the sense opposite to that in which it is made. If the Empire is lost it will only be by the partial or total neglect of Parliament. The development and control of Indian policy up to fifty years ago is a record at which no Englishman need blush. But in those days Parliament conducted a searching inquiry whenever the Company's charter came up for renewal. Every twenty years a committee was appointed which saw people from India face to face, put questions, sifted the answers in cross-examination, and finally submitted to Parliament reports which had a determining effect on policy. So long as the Company, or even its shadow, remained, public opinion and Parliament were watchful. No sooner was it abolished than both acted as though the need for watchfulness had ceased. The officers of government were now their immediate servants; and such was the recognized capacity, honour, and devotion of those officers, that everything was felt to be safe in their hands. The fact was overlooked that a civil service, however devoted, honourable, and efficient, cannot initiate policy, or provide for the evolution of policy. From 1858 onwards Parliament forgot to ask itself to what ends it was governing India, or to supply its agents with the answer.

§ 17. The answer has now been framed in a form which wears the character of finality. It remains for Parliament to pass from tacit to explicit acceptance of the answer. But it also remains for Parliament to see that the first and every subsequent step taken to realize its pronouncement does in fact conform to its terms. This cannot be done by mere Parliamentary debate, unless before the final discussion the plan proposed is examined on the old lines and by those methods which Parliament used when it really discharged these duties. Spokesmen of rival interests in India will flock to London while these matters are at issue. They cannot be heard at the bar of the House. Let them have their say to a select committee, whose members can test their statements by question. In any discussion of Indian affairs the air grows thick with unverified assertion. Before the final decision is taken let Parliament appoint members of its own to test these statements, to examine witnesses, to digest papers, to insist on their production, and, as in the days of old, to report thereon for the guidance not merely of the whole body, but also of public opinion at large. Then, and then only, will it be felt that again there is governance in Indian affairs. Above all, let such

Then, and then only, will it be felt that again there is governance in Indian affairs. Above all, let suc

a Committee be charged to report whether the plan proposed for adoption is really conceived in the spirit of the reference under which it was framed. In unequivocal words it proposes responsible government as the goal of Indian policy. This goal it says can only be achieved by steps. But the first of those steps it provides shall be taken as soon as may be. Of the nature of these steps, and of the pace at which they can follow each other, the Imperial Government and the Government of India are to judge, and this the Parliament to which both are accountable can alone determine from time to time.

§ 18. With these conditions before them there are certain questions by which Parliament and public opinion will do well to test the details of any plan proposed for acceptance. If, as the Pronouncement asserts, the responsibilities of government cannot be transferred to Indian electorates all together, at one stroke, they must be transferred by instalments. Now when any transfer is proposed the first necessary question is whether it is a genuine transfer. Are real responsibilities to be handed over, and to whom? Do the functions transferred carry with them the powers necessary to discharge them? Is it clear that responsibility for the things transferred rests on the electorate and those they elect? Above all, are the arrangements such as admit of electoral government at all? Those who have the patience to read these papers will better appreciate the meaning of such questions.

§ 19. You have promised to apply a new motive power to Indian government. Can you do so without changing the plan of the mechanism or of the chambers in which it is housed? India desires new wine—and rightly. But she thinks to keep it in the old bottles. Can you give her that wine without the vessels to hold it?

§ 20. This people for whom you are the trustees are a fifth part of the whole human race. You have promised to hand over that trust, piece by piece, as you can, to Indians able to accept it. Your task is to find such Indians; but that you will never do, if you wait until you see electorates which are fully and all at once capable of the trust. Did the middle classes in England show themselves fully capable of the trust they owed to the unenfranchised masses? You must have the nerve to see Indian electorates hurt others—the helpless, as well as themselves. It is the only way in which the spirit of trusteeship can be called into being and made to grow. To that end you must give the largest

measure of responsibility which can be transferred at any one time, without imperilling the whole structure. But in doing so realize the importance of continuing to discharge those parts of the trust which remain to yourselves. Do not think that you can help Indians to a higher sense of responsibility if at the same time you fail to discharge your own. You cannot advance towards responsible government without entrusting some interests of the helpless peasant to his landlords. But see that you discharge those interests which you keep in your own hands for the time being. The best service you have done to India is to set a standard of public duty. The worst service you can now do is to lower that standard at the very moment when you are asking Indians to adopt it for themselves. In any plan proposed for your acceptance one inexorable question should be whether it allows you really to discharge those parts of the trust you purport to retain.

§ 21. At last you have named the port which is to be the goal of the voyage, but the way to it lies across uncharted seas. To use Lord Morley's phrase, you can only navigate those seas 'by throwing the lead', and by readiness to turn this way or that as the soundings dictate. Then beware of promises and plans which do not permit of you or your successors throwing the lead. One condition you may with a clear conscience ordain from the first—that the lead shall be thrown from time to time, and that the soundings taken shall be reported to you. Until the final port of full responsible government is attained, the burden of those decisions must rest with you and your successors. It cannot be shifted to India, still less to the English in India. The facts upon which your judgements are based must be carefully and also impartially collected in India. They must also be thoroughly sifted at home. Ask, therefore, whether the system upon which you propose to start is one in which experience can still be used by you and your successors as the criterion of all further advance.

the economy. The model is a dynamic system of four equations, which are solved simultaneously. The first equation is the production function, which relates output to capital and labor. The second equation is the capital accumulation equation, which relates the change in capital to investment and depreciation. The third equation is the labor force equation, which relates the change in labor to population growth and migration. The fourth equation is the government budget constraint, which relates government spending to taxes and debt.

The model is solved numerically using a shooting method. The initial conditions are set at the beginning of the sample period. The model is solved for the optimal path of capital, labor, and government spending over time. The results show that the economy converges to a steady state. The steady state is characterized by a constant level of capital, labor, and government spending. The steady state is stable, meaning that the economy will return to the steady state after a shock. The results also show that the economy is sensitive to changes in the parameters of the model. For example, a change in the depreciation rate will affect the steady state level of capital and labor. A change in the population growth rate will affect the steady state level of labor and government spending.

The model is used to analyze the effects of various policy interventions. For example, the effects of a change in the depreciation rate, a change in the population growth rate, and a change in the government spending rule are analyzed. The results show that a decrease in the depreciation rate leads to an increase in the steady state level of capital and labor. A decrease in the population growth rate leads to a decrease in the steady state level of labor and government spending. A change in the government spending rule affects the steady state level of government spending. The results also show that the economy is sensitive to changes in the parameters of the model. For example, a change in the depreciation rate will affect the steady state level of capital and labor. A change in the population growth rate will affect the steady state level of labor and government spending. The model is used to analyze the effects of various policy interventions. LETTER TO 'THE TIMES'

URGING THE IMMEDIATE APPOINTMENT OF THE
FRANCHISE AND FUNCTIONS COMMITTEES*July 22, 1918*

§ 1. THE Master of Balliol does well to remind us that we also have pledges which may be reduced to 'scraps of paper'. By neglect to examine our engagements we may sap the foundations of British credit, not merely in India, but also wherever the conference is held which must sooner or later end this war. On the merits of the Montagu-Chelmsford report I have nothing to say, nor yet on the attacks directed against it. The arguments to which I would call your attention are those whose real objective is not the proposals of the Viceroy or Secretary of State so much as the instructions of the Imperial Government under which they were framed. Those instructions are contained in the pronouncement of August 20 last, which declares 'the policy of his Majesty's Government, with which the Government of India are in complete accord'. Attempts are now being made to treat this pronouncement as representing the views of no one but Mr. Montagu himself, and as one to which Parliament is uncommitted.

§ 2. The position of the Government in this matter is settled beyond dispute by the words quoted above. But attempts are being made to minimize their effect by creating the idea that the pronouncement was furbished up by Mr. Montagu to justify a speech he had made before assuming office, and was foisted on a Government too busy with the war to know what they were doing. But what are the facts? In December 1916 the Indian National Congress and All-India Muslim League had demanded some statement on the subject. As British statesmen had constantly declared, the whole Commonwealth was fighting to vindicate the cause of self-government. They pointed with pride to the part that India herself was taking in the struggle, and we cannot complain that Nationalist leaders should have asked us to say whether we recognized this principle as the goal of

our policy in India. In the last days of 1916 that straight question was put by the largest body of delegates ever assembled for political discussion in that populous country.

§ 3. The answer to be given to this question was, as we know from the published statements of the Viceroy, the subject of prolonged correspondence between Mr. Chamberlain and the Government of India. A glance at the document will show that it is one which had been agreed upon between Whitehall and Delhi. It was certainly not born of an impulse subsequent to Mr. Chamberlain's departure from office. No one who followed the course of events could possibly regard it as representing a sudden reversal of policy on the part of his successor. In India it was stated that Mr. Chamberlain, had he not resigned, would have visited India himself, and he could not have done so without published instructions. The evidence that such instructions were in draft before he left office is overwhelming.

§ 4. Most unfortunately this momentous pronouncement was omitted here on the eve of an adjournment merely in answer to a question put by a private member. In India it was, of course, published next day in a *Gazette Extraordinary*, the type for which had obviously been set in anticipation of the event. At once it figured in the Indian mind as a charter superseding in importance the Proclamation of 1858. It now ranks as the Magna Carta of India, and I doubt not there are thousands of Indians who have learned it by heart. To the English mind, with its various preoccupations, it is at best but one in a multitude of stars. To the educated Indian it is as the sun obscuring the stars, but bathing his whole world in light.

§ 5. In any case the pronouncement was made in the name of the Imperial Government. But what of the contention that Parliament is in no way committed? True, the pronouncement was made just as the House was adjourning for the August recess. But Parliament reassembled before Mr. Montagu left for India on October 20. The subject was raised in the House of Lords, but no vote was taken: and none was challenged in the House of Commons. Not merely Parliament as a whole, but every member of Parliament, allowed Mr. Montagu to leave for India without bringing to the test of a vote his instructions from the Government published two months before. And no one has challenged them since. It is open to any one to show that the Report exceeds the instructions, but scarcely to say that they were not accepted by Parliament itself.

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.05	0.02	2.50	0.01
Gender of the head of household (Male = 1, Female = 0)	-0.10	0.03	-3.33	0.00
Constant	1.50	0.10	15.00	0.00

The regression results indicate that the number of children in the household is positively related to the age of the head of household and negatively related to the gender of the head of household. Specifically, for every one-year increase in the age of the head of household, the number of children in the household increases by 0.05, holding all other variables constant. Conversely, for every one-unit increase in the gender variable (from female to male), the number of children in the household decreases by 0.10, holding all other variables constant.

our policy in India. In the last days of 1916 that straight question was put by the largest body of delegates ever assembled for political discussion in that populous country.

And no one has challenged them since. It is open to any one to show that the Report exceeds the instructions, but scarcely to say that they were not accepted by Parliament itself.

§ 6. The educated classes will now justly regard this pronouncement as a pledge binding as any in the whole course of our relations with India, and the basis of our rule will depend henceforth on its perfect observance. Our rule, we are told, depends on force. Of course it does. Any text-book will tell you that law is nowhere law unless you enforce it. But force will recoil and destroy you if you seek to wield it unhinged from the primal axis of right. That is the principle for which we are fighting, and which, with our Allies, we mean to prove on the body of Germany. The one real basis of our power in India is the unimpeachable faith of the Government and Parliament of the British Commonwealth. This pronouncement affects the whole political future of a population greater than all those of Western Europe engaged in this struggle. In all seriousness let us consider what our moral position at the peace negotiations will be when the charge is made (as made it will be) that we have treated this pronouncement as 'a scrap of paper'. Our answer must be one which will satisfy not merely ourselves, but our friends, the world at large, and the verdict of history. *Now* is the time to look to the precise terms of those pledges, as we shall wish that we had looked at them then. I make no excuse, therefore, for bringing them to the notice of your readers.

§ 7. The pronouncement began by accepting responsible government as the goal of our policy in India. The Secretary of State was sent to India to frame proposals for the first steps to be taken in that direction. A pledge was added that the first steps should be taken not before the peace nor after the peace, but 'as soon as possible', subject only to one condition, 'that ample opportunity' should first 'be afforded for the public discussion of the proposals'.

This last condition precludes the Imperial Government from accepting the Montagu-Chelmsford proposals at this juncture. To begin with, they are not as yet complete. We are not told what powers it is proposed to transfer to the new councils in each province, nor yet the franchises upon which those councils are to be elected. Most wisely the Viceroy and the Secretary of State left these schedules to be framed by committees, the chairmen of which are to be sent to India for the purpose. Clearly the scheme is not ripe for conclusive discussion until we know who the electors in each province are to be, or the powers to be given them. And when completed, Parliament has still to hear what Indians themselves think of these proposals. By

§ 6. The educated classes will now justly regard this pronouncement as a pledge binding as any in the whole course of our relations with India, and the basis of our rule will depend henceforth on its perfect observance. Our rule, we are told, depends on force. Of course it does. Any text-book will tell you that law is nowhere law unless you enforce it. But force will recoil and destroy you if you seek to wield it unhinged from the primal axis of right. That is the principle for which we are fighting, and which, with our Allies, we mean to prove on the body of Germany. The one real basis of our power in India is the unimpeachable faith of the Government and Parliament of the British Commonwealth. This pronouncement affects the whole political future of a population greater than all those of Western Europe engaged in this struggle. In all seriousness let us consider what our moral position at the peace negotiations will be when the charge is made (as made it will be) that we have treated this pronouncement as 'a scrap of paper'. Our answer must be one which will satisfy not merely ourselves, but our friends, the world at large, and the verdict of history. *Now* is the time to look to the precise terms of those pledges, as we shall wish that we had looked at them then. I make no excuse, therefore, for bringing them to the notice of your readers.

§ 7. The pronouncement began by accepting responsible government as the goal of our policy in India. The Secretary of State was sent to India to frame proposals for the first steps to be taken in that direction. A pledge was added that the first steps should be taken not before the peace nor after the peace, but 'as soon as possible', subject only to one condition, 'that ample opportunity' should first 'be afforded for the public discussion of the proposals'.

This last condition precludes the Imperial Government from accepting the Montagu-Chelmsford proposals at this juncture. To begin with, they are not as yet complete. We are not told what powers it is proposed to transfer to the new councils in each province, nor yet the franchises upon which those councils are to be elected. Most wisely the Viceroy and the Secretary of State left these schedules to be framed by committees, the chairmen of which are to be sent to India for the purpose. Clearly the scheme is not ripe for conclusive discussion until we know who the electors in each province are to be, or the powers to be given them. And when completed, Parliament has still to hear what Indians themselves think of these proposals. By

Cabinet order the inquiries of Mr. Montagu and Lord Chelmsford were held behind closed doors, and what was said is not upon record. But in any case the scheme in its present shape was not before the spokesmen to whom they listened. The public here, with whom the final decisions rest, must surely be allowed to know their views on the whole scheme in all its aspects. In practice this can only be done by appointing a Committee of Parliament to hear, test, and record the views of every one entitled to express them. And it is not merely the opinions of Mrs. Besant and Mr. Tilak which have to be heard; it is also those of Lord Sydenham and Dr. Nair. For that purpose the spokesmen of all the sections in India must be brought here. They will be wanted in India while the committees on powers and electoral qualifications are sitting there, and can only come to England to give their views on the main issues when those committees have finished their work. If the terms of the pronouncement are to be observed, the business can only move at a certain pace. But Government is pledged in terms to put it through 'as soon as possible'. If our faith is to be kept beyond question, not a day must be lost in appointing the subsidiary committees and in sending the chairmen to India.

§ 8. In spite of these pledges, the perilous demand has been made that the whole question of Indian reforms should be postponed to a more convenient season. From the same quarters a conspiracy is alleged to rush the proposals through without discussion, and colour has been given to that charge by demands unwisely urged by supporters of the scheme for their instant adoption by Government. The whole position will be cleared, and distrust on all sides allayed, if Government will, before Parliament rises, announce the appointment of the committees and promise that the proposals when so completed shall be referred to a select committee before which all responsible opinions can be heard, recorded, and reported to Parliament itself. Government, as I have shown, is already committed to the principles embodied in its own declaration of August 20. Its final decision upon the specific proposals embodied in the Report and possible variants by which its principles can be carried out can only be taken when the select committee has reported. From the moment when such an announcement has been made we may expect that the Press here will refuse to publish language which cannot fail to kindle a flame of resentment throughout India and provoke discord at a moment when it

the economy. The model is a dynamic system of four equations in four variables, y , k , l , and m . The first equation is the production function, which is a Cobb-Douglas function with constant returns to scale. The second equation is the capital accumulation equation, which states that the change in the capital stock is equal to the investment minus the depreciation. The third equation is the labor force equation, which states that the change in the labor force is equal to the immigration minus the emigration. The fourth equation is the migration equation, which states that the change in the migration is equal to the difference between the immigration and the emigration. The model is solved by finding the steady state values of the variables. The steady state values are found by setting the change in each variable equal to zero and solving the resulting system of equations. The steady state values are then used to calculate the long-run growth rate of the economy.

The model is solved by finding the steady state values of the variables. The steady state values are found by setting the change in each variable equal to zero and solving the resulting system of equations. The steady state values are then used to calculate the long-run growth rate of the economy. The long-run growth rate is the rate at which the economy grows in the long run. It is calculated by taking the logarithm of the steady state values and dividing by the time period. The long-run growth rate is then compared to the short-run growth rate to see if there is a long-run growth effect. The long-run growth effect is the difference between the long-run growth rate and the short-run growth rate. The long-run growth effect is then used to calculate the long-run growth rate of the economy.

The long-run growth rate of the economy is the rate at which the economy grows in the long run. It is calculated by taking the logarithm of the steady state values and dividing by the time period. Cabinet order the inquiries of Mr. Montagu and Lord Chelmsford were held behind closed doors, and what was said is not upon record. But in any case the scheme in its present shape was not before the spokesmen to whom they listened. The public here, with whom the final decisions rest, must surely be allowed to know their views on the whole scheme in all its aspects. In practice this can only be done by appointing a Committee of Parliament to hear, test, and record the views of every one entitled to express them. And it is not merely the opinions of Mrs. Besant and Mr. Tilak which have to be heard; it is also those of Lord Sydenham and Dr. Nair. For that purpose the spokesmen of all the sections in India must be brought here. They will be wanted in India while the committees on powers and electoral qualifications are sitting there, and can only come to England to give their views on the main issues when those committees have finished their work. If the terms of the pronouncement are to be observed, the business can only move at a certain pace. But Government is pledged in terms to put it through 'as soon as possible'. If our faith is to be kept beyond question, not a day must be lost in appointing the subsidiary committees and in sending the chairmen to India.

§ 8. In spite of these pledges, the perilous demand has been made that the whole question of Indian reforms should be postponed to a more convenient season. From the same quarters a conspiracy is alleged to rush the proposals through without discussion, and colour has been given to that charge by demands unwisely urged by supporters of the scheme for their instant adoption by Government. is surely of importance that this great Commonwealth should be at unity with itself.

§ 9. My own belief in the importance of Indian reform at the earliest possible date requires no proof. Of supreme importance is assurance now that we shall go to the Peace Conference to discuss the fate of subject peoples in Europe and elsewhere with a clear conscience and a clean sheet. Our danger lies in pledges so framed that mere delay, a failure to take necessary steps forthwith, will expose us to a breach of the faith we have plighted to a country containing one-sixth of the human race. We stand in jeopardy unless the Cabinet will refer to these pledges at this juncture and announce in advance a procedure scrupulously framed to discharge their spirit as well as their letter.

MEMORANDUM

SUBMITTED TO THE JOINT SELECT COMMITTEE
OF LORDS AND COMMONS APPOINTED TO
REPORT ON THE INDIA BILL

(October 13, 1919)

Question 1. Do you accept the proposition that it is desirable to bring about the progressive realization of responsible government in India ; and, if so, how do you define the expression 'responsible government' ? And do you generally accept the proposition contained in the Preamble ?

§ 1. I accept the pronouncement of policy by the Imperial Government made on August 20, 1917, with a single qualification. The time and measure of each advance can, in the last instance be determined only on the authority of the Imperial Parliament and of no one else ; and it should be so stated. The Government of India is the adviser and agent of the Imperial Government, and not, as the words of the pronouncement suggest, a collateral authority.

§ 2. By 'responsible government' I mean the administration of public functions by an executive which may be dismissed from office by a vote of an electorate or of their representatives.

§ 3. The only other subject dealt with in the preamble is decentralization. On this point I hold that in India, as in all great countries, nothing should be done by the central government which can, with equal efficiency, be done by any more localized authority. The line between functions assigned to provincial governments and those reserved to the central government should be the clearest which can be drawn in practice, to the intent that the public may be able to recognize which authority is to be held responsible in each case. I think it of even greater importance that the same principle of clear demarcation should be applied to the administration of functions transferred to ministers responsible to electorates, as distinguished from those reserved to executive councils responsible to Parliament.

MEMORANDUM

SUBMITTED TO THE JOINT SELECT COMMITTEE
OF LORDS AND COMMONS APPOINTED TO
REPORT ON THE INDIA BILL

(October 13, 1919)

Question 1. Do you accept the proposition that it is desirable to bring about the progressive realization of responsible government in India ; and, if so, how do you define the expression 'responsible government' ? And do you generally accept the proposition contained in the Preamble ?

§ 1. I accept the pronouncement of policy by the Imperial Government made on August 20, 1917, with a single qualification. The time and measure of each advance can, in the last instance be determined only on the authority of the Imperial Parliament and of no one else ; and it should be so stated. The Government of India is the adviser and agent of the Imperial Government, and not, as the words of the pronouncement suggest, a collateral authority.

§ 2. By 'responsible government' I mean the administration of public functions by an executive which may be dismissed from office by a vote of an electorate or of their representatives.

§ 3. The only other subject dealt with in the preamble is decentralization. On this point I hold that in India, as in all great countries, nothing should be done by the central government which can, with equal efficiency, be done by any more localized authority. The line between functions assigned to provincial governments and those reserved to the central government should be the clearest which can be drawn in practice, to the intent that the public may be able to recognize which authority is to be held responsible in each case. I think it of even greater importance that the same principle of clear demarcation should be applied to the administration of functions transferred to ministers responsible to electorates, as distinguished from those reserved to executive councils responsible to Parliament.

§ 4. By the forgoing answers I mean it to be understood that, in accepting the pronouncement of August 20, 1917, I really look forward to a time, however remote, when Indian affairs, as distinguished from those general to the British Commonwealth as a whole, will be as fully and finally determined by Indian electorates as those of the self-governing Dominions now are by Dominion electorates. Any change in this measure suggested in this statement is conceived with an eye to the earliest possible attainment of that goal. This, to me, is the final criterion of all questions at issue before the Committee, and I ask that my evidence may be tested thereby.

§ 5. It was this which Lord Carmichael evidently had in mind when he said 'Care should be taken not to take away responsibility from the British Parliament. It seems to me that in that responsibility we have the surest guarantee that progress will be real.'¹ Strongly agreeing, as I do, with Lord Carmichael on this point, I regard as of vital importance the second part of the pronouncement, which says that 'The British Government and the Government of India, on whom the responsibility lies for the welfare and advancement of the Indian peoples, must be judges of the time and measure of each advance, and they must be guided by the co-operation received from those upon whom new opportunities of service will thus be conferred and by the extent to which it is found that confidence can be reposed in their sense of responsibility'.

§ 6. I hope the Joint Committee will realize the danger of including only the first part of the pronouncement in the preamble, while omitting the second. In December 1917, before the secession of the moderates, the Indian National Congress whilst approving that part of the formula which accepted responsible government as the goal, hastened to 'repudiate the claim of others to decide for India the time and measure of the stages by which it should be achieved as a negation of the recognized principle of self-determination'. We have here a direct challenge to the authority of Parliament in India, and delegates have been sent to repeat that challenge. They have repeated it to this Joint Committee—that is to say, in the ears of Parliament itself.² Their spokesman, Mr. Patel, went on to say³ that

the 'Indian National Congress does not regard those phrases as part of His Majesty's announcement'. So, too, Mrs. Besant urges that 'having started India on the road to Home Rule it should be left to her representative councils to regulate her advance to complete responsible government'¹

It is most unfortunate that this epoch-making pronouncement of Imperial policy should in the first instance have been made merely as an answer by the Secretary of State to a question put by a private member, and then never endorsed in terms by Parliament itself. If, as is now proposed in the preamble, Parliament affirms the first part of the pronouncement and omits all reference to the second, it will most assuredly be argued in India that Parliament has consciously refrained from affirming the second part in deference to the views of the Indian National Congress. The emphatic contradiction given by the Chairman of this Committee to Mr. Patel² will be buried in the mass of its proceedings and will scarcely penetrate to India. Or, if it does, it will be argued that the statement was supported neither by the Secretary of State nor the Committee. This attempt to represent the second half of the pronouncement as expressing only the personal views of Mr. Montagu is a timely warning. By including in the preamble all the words of the pronouncement which are of permanent application, Parliament can close a distracting controversy once for all. It is worth noting that an experienced official like Sir Alexander Cardew complained that the preamble differs from the pronouncement.³ Appended to this statement is the preamble amended to a form which would remove all doubts in the matter.

§ 7. Another of the claims which tend to obscure the real path to responsible government will be closed thereby. A demand is constantly made for a definite date to be fixed at which complete responsible government will be granted. This demand, as Mr. Madhav-Rao says,⁴ arises from distrust in our good intentions, which undoubtedly exists, though its causes cannot be here discussed. But the claim cannot be reconciled with the spirit of the pronouncement when affirmed as a whole. India ought to have responsible government the moment she is able to assume it. It behoves Parliament not only to see that she has it as soon as she is able, but also that nothing is left undone which will help Indian electorates to develop the qualities necessary to the complete management of their own affairs. Parliament is

⁴ q. 2074.

pledged to give them the widest field for the exercise of those qualities compatible with the maintenance of order, without which the development of genuine electorates cannot begin. For the rest, the rate of progress will depend on the use made of that field by the electorates and those they elect. The pronouncement affirms this. But the thing is true apart from the pronouncement. It is easy enough to bring anarchy to India; but we can only bring self-government to Indians in so far as they make themselves able to accept it. Granted that Parliament is faithful to the spirit and letter of the pronouncement, the development of conditions essential to responsible governments will depend on Indians themselves. No gift of prophecy can tell us how fast that development will be. Experience alone can determine it, and if the members assembled in Parliament to-day were to say that India will be ready for full responsible government at any given date, they would be presuming to settle a question which can by nature be settled only by those who come after them. This demand will be answered and set at rest by affirming the second part of the pronouncement once for all.

§ 8. It is worth suggesting that the fitness of India for complete responsible government is susceptible of a definite test. Mrs. Besant remarks¹ that that will be when India can assume control of home defence. To be more precise, I should say it will be whenever it is found possible to withdraw Imperial troops except those required to defend the frontiers of India, as part of the British Commonwealth, from foreign aggression. Whenever the Imperial Government has to form an opinion whether India is ripe for full responsible government, every member of it can ask himself whether he is prepared to accept the office of Governor-General subject to the condition that he, in his personal capacity, will not be able to call upon British troops to suppress such disorders as lately broke out in the Punjab.

§ 9. The tendency to question or belittle the authority of Parliament is not, however, confined to extremists in India, but is present in the minds of many of our own countrymen there. It tinges even the views of the head of a province when criticizing the proposal that Parliament should test the progress of India towards responsible government by periodic commissions appointed by and responsible to itself.² At this parting of the ways it is of vital importance, especially to India, that Parliament should assert its paramount

authority in terms which admit of no further question, whether by Indians or Europeans.

§ 10. The authority of Parliament must be asserted when questioned; but authority cannot rest on assertion alone. In India its moral foundation depends on how far the word of Parliament proves to be binding on itself no less than on her. Our record in India will bear comparison with that of any other rulers similarly placed. Yet even so in the matter of pledges we are not wholly free from arrears. Hence it is that the one phrase in the pronouncement which has captured the imagination of Indians most completely is contained in the four words 'as soon as possible'. Parliament, therefore, should be studious that no delay in the performance of its promises is chargeable to itself. So far as this pronouncement is concerned there are as yet no arrears to work off. There was no delay in the Secretary of State's visit to India, in the conduct of the inquiry, nor in the production of the report. The scheme had scarcely been published a couple of months before the Imperial Government found time to dispatch the Southborough committees to complete it, and all this in the stress of war. Their work was done with the utmost expedition, and now, with the Bill, lies before Parliament and this Committee. The completion of this measure in the present session will, I believe, establish for many generations in India that faith in the pledges of Parliament which, with Lord Carmichael, I regard as most essential to its future progress in the art of controlling its own affairs. It was this, I conceive, which Sir Verney Lovett had in his mind when urging the Committee not to depart from the main outlines of the Bill in favour of the alternative proposals of some of the provincial governments.¹ He did not disguise his preference for those proposals on their merits. But he takes the situation as it now is, and sees the cardinal importance not only of avoiding any reasonable charge of delay, but also of giving something which is demonstrably an instalment of genuine responsible government. I take leave to recommend this weighty warning to the special attention of the Committee, coming, as it does, from the lips of so cautious, so conservative and so experienced an official. I hope the Committee will advise certain amendments. But, none the less, I would urge them to disregard any amendment I suggest, if, in their judgement as Parliamentarians, its proposal would endanger the prospect of the measure passing into

¹ p. 358, qq. 5 and 6.

authority in terms which admit of no further question, whether by Indians or Europeans.

¹ p. 358, qq. 5 and 6.

law in the course of the present session. Everything I have to say is subject to that proviso. The scheme is, in my judgement, strategically sound. If, through tactical defects, it should come to grief, those defects are capable of amendment, though, of course, at a cost. But the cost will be infinitely smaller than that involved in a measure strategically wrong; for such measures lead only to a precipice, from the brink or perhaps from the bottom of which you have to go back and begin all over again. In my opinion the Minto-Morley reforms and the alternative scheme by provincial governments belong to that category. The searching analysis to which the Committee have now submitted them proves no less.

§ 11. To summarize this part of my evidence I submit that while Parliament is bound to give effect to the spirit as well as the letter of the pronouncement, it is bound no less to exercise its own unfettered judgement as to the methods it adopts. The final decisions must be those not of the Secretary of State, nor of the Viceroy, nor of the Government of India, nor of any section of Indians, nor even of all these added together, but of Parliament itself, and if what Parliament does is, in its wisdom, calculated to accelerate the progress of India towards responsible government, there can be no question of 'whittling down'. My own recommendations are all such as in my opinion will hasten the advent of responsible government, and I therefore ignore that too freely repeated phrase.

2. Do you think that the realization of responsible government in the provinces involves the establishment in provincial legislatures of a substantial elected majority? (Clause 6.) 3. Do you think that the non-official members of the provincial legislatures should possess power to control the actions and policy of the executive? Do you think they possess such power at present? 4. Do you think that there are certain matters or functions of government in the provinces in which at present the provincial executive must remain responsible to the Secretary of State and Parliament, and must therefore be in a position to enforce its wishes?

My answer to these questions is as follows:

§ 1. There are two principles underlying all schemes which look to the realization of self-government in India. One is the principle embodied in the Minto-Morley reforms,

law in the course of the present session. Everything I have to say is subject to that proviso. The scheme is, in my judgement, strategically sound. If, through tactical defects, it should come to grief, those defects are capable of amendment, though, of course, at a cost. But the cost will be infinitely smaller than that involved in a measure strategically wrong; for such measures lead only to a precipice, from the brink or perhaps from the bottom of which you have to go back and begin all over again. In my opinion the Minto-Morley reforms and the alternative scheme by provincial governments belong to that category. The searching analysis to which the Committee have now submitted them proves no less.

§ 11. To summarize this part of my evidence I submit that while Parliament is bound to give effect to the spirit as well as the letter of the pronouncement, it is bound no less to exercise its own unfettered judgement as to the methods it adopts. The final decisions must be those not of the Secretary of State, nor of the Viceroy, nor of the Government of India, nor of any section of Indians, nor even of all these added together, but of Parliament itself, and if what Parliament does is, in its wisdom, calculated to accelerate the progress of India towards responsible government, there can be no question of 'whittling down'. My own recommendations are all such as in my opinion will hasten the advent of responsible government, and I therefore ignore that too freely repeated phrase.

2. Do you think that the realization of responsible government in the provinces involves the establishment in provincial legislatures of a substantial elected majority? (Clause 6.) 3. Do you think that the non-official members of the provincial legislatures should possess power to control the actions and policy of the executive? Do you think they possess such power at present? 4. Do you think that there are certain matters or functions of government in the provinces in which at present the provincial executive must remain responsible to the Secretary of State and Parliament, and must therefore be in a position to enforce its wishes?

My answer to these questions is as follows:

§ 1. There are two principles underlying all schemes which look to the realization of self-government in India. One is the principle embodied in the Minto-Morley reforms,

the Congress-League Scheme, and that of certain provincial governments. The other is the principle of dyarchy adopted in the Bill. It is highly elastic, and can be applied in many different ways.

§ 2. As to the Minto-Morley principle, my views are on record in Chapters IV, V, and VI of a book called *Letters to the People of India on Responsible Government*. This book was published in India and was before the Secretary of State and Viceroy when they dealt with this subject. In words borrowed from Chapter VII of their report, I regard this policy as 'fatal to good government', 'wrong in theory', 'the worst possible education for responsible government', 'unworkable in practice', and 'the negation of responsible government'. A candid examination of this policy must lead to its rejection by any body of men with actual experience of government or knowledge of history. In the light of their own analysis the authors of the report could only reject it. And so as a matter of common sense they were thrown back on the only alternative principle. They decided, therefore, that Indian ministers removable by and therefore answerable to Indian electorates and those they elect, must be made responsible for certain definite functions which may be increased or diminished as experience may warrant, the officials answerable to Parliament in England continuing to administer all other functions until such time as Indian electorates might be qualified to assume them.¹

§ 3. From these views, with which I agree, it follows that in the legislatures to which ministers are answerable there must be a substantial elected majority. And I go so far as to say that there should be no official voters.

§ 4. In the councils which deal with reserved subjects the non-official members should be able to exercise the utmost influence on the executive; but control, that is to say the final power of decision, must rest in fact as well as in name with the executive. Otherwise it cannot discharge the trust for which it is in the last instance answerable to Parliament, and Parliament alone.

I do not consider that most provincial executives exercise such power at present, especially in Bengal. Had they done so I do not believe that criminal conspiracy in Bengal would ever have been suffered to reach such lengths and spread until it had to be dealt with by the Indian Legislature as an all-India subject. The want of power in provincial governments to maintain local order without bringing such

questions on to the all-India stage and so spreading the controversy to the whole country is the prime cause of the troubles which have culminated in riots against the Rowlatt Act. Lord Carmichael hinted as much.¹

§ 5. To question 4, whether I think that there are certain matters or functions of government in the provinces in which at present the provincial executive must remain responsible to the Secretary of State and Parliament, and must therefore be in a position to enforce its wishes, my answer is emphatically Yes! I do not think there is any serious dispute on the subject. Complete responsible government in the major provinces is, in my opinion, incompatible with anything but complete responsible government in the government of India. I have given my reasons elsewhere.²

5. If you accept the propositions stated under questions 1 to 4 do you think that the dual form of government embodied in the Bill is the best means of securing them? If not, what are your objections to that feature of the Bill, and by what other means would you attempt to secure the objects in view? 6. If you have any other method to suggest, does it (1) provide possibilities of advance by stages and facilitate the 'progressive realization of responsible government', and, if it does, in what way? (Clause 2, 3, &c.), and (2) does it afford means of judgement, (a) to the electors, and (b) to the Statutory Commission which is to examine and report on progress, of the success or failure in results of the control exercised by the Legislature and those who represent it in the executive? 7. If you consider a dual form of government acceptable in principle, are there any points of detail the modification of which you regard as necessary? If so, what are those points, and what modifications would you suggest?

§ 1. In the Joint Address signed by 64 Europeans and 90 Indians, appended to the book to which I have referred,³ is a scheme for applying the principle of dyarchy, which is, I think, on its merits preferable to that set forth in the Bill. A brief account of its genesis will show why I think so. In 1915 and 1916 I was associated with several friends, who had lifelong experience of Indian government, in producing a paper on the subject for circulation amongst

the study groups connected with the Round Table. In the course of our discussions we were led to the conclusion that responsible government ought to be announced as the goal of our policy in India, but that no real progress towards it could be made along the lines of the Minto-Morley reforms. The method of devolving specific functions on ministers responsible to elected bodies was then suggested as the obvious alternative. We always spoke of it as 'specific devolution'. With a view to considering how the idea would work as applied to Indian conditions, one member of the circle who had served in Bengal drafted a scheme in terms of that province. The draft was the basis of a series of discussions before it was put into final shape by its author. Lord Chelmsford, who had heard of these studies, asked to see the results, and copies of the draft were sent to him in India about June 1916. On the eve of Mr. Montagu's arrival, some 15 months later, the paper was reprinted by the Government of India and circulated to provincial governments with other papers attached to the instructions sent them to prepare their views for submission to him. A copy of this paper is handed in herewith.¹

§ 2. In October 1916 I arrived in India to pursue these studies of the problem on the spot. My mind was then still open on the subject of specific devolution, but after studying Indian conditions for six months I could see no other key to the problem. So in answering a letter to my friend, Mr. Bhupendra Nath Basu, I propounded for his criticism a scheme of 'dyarchy', the name which had been given to the principle by a member of the Government of India. The scheme was worked out in terms of the United Provinces, of which province I had made a particular study. I was greatly assisted in preparing it by friends in the Civil Service who, without offering any opinion on the principle itself, thought that it ought to be studied more closely. The letter was afterwards printed in interleaved copies and circulated for criticism to all those, both Indians and Europeans, who had helped me with information. A mass of valuable criticisms was sent me. I printed a selection of these, which, together with the paper to which they relate, I now hand in.²

§ 3. Even more valuable, however, were the criticisms I received in verbal discussions with Indians and officials who had read the pamphlet. It was in the course of these discussions that I came to believe that a province, like that dealt with in the scheme, which contains about 48,000,000

souls, was far too large for the purposes of real provincial self-government, and that India's progress towards responsible government would be gravely retarded unless or until such colossal units were subdivided. My views as modified by these investigations were afterwards embodied in the Joint Address which, when published in November 1917, first gave wide publicity to the principle of 'dyarchy'. The principle then began to be recognized as the one alternative to the Minto-Morley principle, which had been carried to its logical expression in the Congress-League scheme.

§ 4. Except for the points of difference upon which I shall dwell in the course of this evidence, the scheme embodied in the Joint Report and the Bill is the same as that contained in the letter to Mr. Bhupendra Nath Basu of April 6, 1917. With these important exceptions the investigations of the Secretary of State and Viceroy had led them to the same point to which I myself had been brought by April 1917. But those investigations did not lead them to the conclusions I had formed six months later as the result of further inquiries. They did not adopt the view set forth in the Joint Address that Indians should be asked to make their first experiment in responsible government in areas really adapted to the task and suited, side by side with the native States, to form self-governing provinces in a future United States of India beneath the British flag. My own views on the subject are set forth at length in Chapter VIII of *Letters to the People of India*. The reasons for rejecting them are contained in § 246 of the Joint Report. A glance at this section will show that the operative reason was unwillingness to face opposition to a scheme of partition.

§ 5. That such opposition existed is true. It is no less true that opposition to the whole principle of dyarchy was equally emphatic; and very naturally so. For a year the Congress-League scheme had held the field as the only concrete proposal for reforms. Its authors had every excuse for believing that it must be accepted in substance. As their own child it was naturally and properly dear to them. Under these circumstances the alternative policy embodied in the Joint Address could scarcely hope to be considered on its merits at the first blush. Naturally the authors of the Congress-League scheme attacked it, and, equally naturally, they selected the point upon which attack was likely to prove most formidable in the public mind, still inflamed by memories of the partition of Bengal.

As their own child it was naturally and properly dear to them. Under these circumstances the alternative policy embodied in the Joint Address could scarcely hope to be considered on its merits at the first blush. Naturally the authors of the Congress-League scheme attacked it, and, equally naturally, they selected the point upon which attack was likely to prove most formidable in the public mind, still inflamed by memories of the partition of Bengal.

§ 6. I do not presume to say that the eminent authors of the Joint Report, weighted as they were by their heavy responsibilities, should have squarely faced this opposition. Speaking as one unhampered by official responsibility, I can only say that I think that in their position I should have done so, believing as I do that the institution of responsible government in provincial areas of appropriate size and based on racial and linguistic units will bring India nearer to the final goal by many generations. I will give my reasons for saying so. The principle of dyarchy itself was denounced, especially by many of the witnesses who have now appeared to support it before this Committee. This evidence that Indian leaders can revise their opinions, and do not shrink from admitting that they have done so, of itself augurs well for the progress of India towards self government. In spite of all prejudices and passions, the reasons for things, if they are valid, do sink into the minds of Indians when explained in a spirit of sympathy such as that adopted in the Joint Report. But more especially is this so when they are presented with the high authority of men in the position of its authors. The readiness of Indians to listen to rulers whom they feel to be in sympathy with their aims is one of the great hopes of the future. It is, I may add, one of the most urgent reasons why their present rulers should be men who can sympathize with aims learned from a study of our own civilization.

How equally potent is a lead in the wrong direction is shown by the history of reform from 1909 to the Indian National Congress of 1917. India had been started on a course which, as the authors of the Joint Report recognized, every one must see on closer examination must lead to anarchy. They have rendered an unexampled service to India by making that examination for themselves and placing it on record in Chapter VII of their report.

§ 7. As to the areas, I think that a great opportunity was lost. But that loss is a definite fact in the situation which has to be recognized. Even if I were so fortunate as to convince the Secretary of State of my views at the eleventh hour, I would not advise him now to substitute the Joint Address for the Joint Report as the basis of the Bill; for it could not then pass in the present session, and the genuine intention of Parliament to give effect to the pronouncement 'as soon as possible' would be held in question throughout India. In my answer to Question 6 I want to be perfectly clear on this point. I do not now suggest the scheme set

In my answer to Question 6 I want to be perfectly clear on this point. I do not now suggest the scheme set

forth in the Joint Address as one for substitution for the scheme in the Bill.

§ 8. I do think, however, there are certain flagrant cases which demand the special attention of this Committee, the cases of Sind, of Orissa, and of the two detached areas in Assam. I hope that members will consider these cases with a large map of India before them. Look at Sind. The Maratha country, the stronghold of Hinduism, is the heart of Bombay. From this country Sind is separated by native states thrust into the middle of which are certain districts inhabited by Gujeratis under British rule. Even from the northern point of these isolated districts Sind is divided by 100 miles. But from Maratha territory, which forms the heart of the Bombay Province, Sind is divided by 260 miles, including, besides the patchwork of British and native territories, Rajputana and an arm of the sea. Geographically, Sind is the estuary of the Indus, which connects it closely with the Punjab. In race and language it has no affinities with the rest of Bombay. In religion it is almost entirely Mohammedan, which counts most of all in India. That its conquest was effected from Bombay is a chronological accident, due to the fact that it took place before British rule was established in the Punjab. Napier's conquest of Sind was an act difficult to justify. Had it not been hastened by an impetuous soldier, we should have come into touch with its emirs later on by way of the Punjab down the Indus valley, and it is pardonable to hope that Sind would then have been treated on the same lines as Rajputana.

§ 9. The incorporation of Finland with Prussia in one province of the German Empire would be less absurd. So long as a government contains no real element of popular control, such forced and unnatural unions are of small account. A Director of Education who is a European by race, a Christian by religion, and an Englishman by speech is just as acceptable to Mohammedan Sindis as to the Marathas three or four hundred miles away. But the moment you substitute a minister responsible to an overwhelming majority of Hindus the case is entirely altered. Does Parliament really propose to hand over the control of education in this Moslem territory to a Hindu majority living in a country hundreds of miles distant, with no more racial and linguistic affinity to Sind than Prussia has to the people of Finland?

In Appendix V, p. 110, of your proceedings the statement

forth in the Joint Address as one for substitution for the scheme in the Bill.

§ 8. I do think, however, there are certain flagrant cases which demand the special attention of this Committee, the cases of Sind, of Orissa, and of the two detached areas in Assam. I hope that members will consider these cases with a large map of India before them. Look at Sind. The Maratha country, the stronghold of Hinduism, is the heart of Bombay. Does Parliament really propose to hand over the control of education in this Moslem territory to a Hindu majority living in a country hundreds of miles distant, with no more racial and linguistic affinity to Sind than Prussia has to the people of Finland?

In Appendix V, p. 110, of your proceedings the statement

is made that Sir Francis Younghusband urged the necessity of giving Sind an administration of its own, and I venture to suggest that his views on the subject might be elicited.

§ 10. A glance at the map as re-drawn since 1911 is sufficient to establish the case for Orissa. In that year government decided to reconstitute Bengal on racial and linguistic lines as opposed to religious divisions. In pursuance of the same policy the claims to a separate administration of the Hindi-speaking people of Behar were recognized, and a province was instituted centring on the middle plains of the Ganges Valley, with its northern boundaries resting against the Himalayan ranges of Nepal. Under the thin pretence of giving this province a seaboard, Orissa was thrown in with Behar in cynical disregard of the very principles upon which the whole rearrangement was justified. But as the map shows, the British territories of Orissa are separated from Behar by a wide and mountainous tract of native territories, at its narrowest point 60 miles wide. No attempt was made to restore the Ooriyas included in the Central Provinces and the north-eastern corner of Madras to unity with their kinsmen in Orissa. So much was done as would satisfy demands which were vocal at the moment, and no more.

The Ooriyas came to Calcutta to lay their case before the Secretary of State and the Viceroy, but the only public reference to the fact that I can find is contained in a note of my own book. In the passage to which that note is appended I tried to show how vital to the whole policy set forth in the pronouncement is the question of language. In India the official and political classes both incline to talk as though the progress of India towards responsible government depended on training Indians to the work of ministers, legislators, and officials. From first to last I say it depends upon training electorates to a real understanding of the question at issue, and to a habit of recording conscious decisions upon them. Such training will not begin in any real sense except in so far as provincial business is transacted and discussed in a language the people at large understand. So far as I can find, the Joint Report devotes less than five lines to the whole topic.¹ I venture to say that the question is of infinitely greater importance than the issue between the Brahmins and Non-Brahmins upon which pages of evidence have been given. The key to that lesser problem will in fact be found in the answer to the greater one. The

¹ Joint Report, § 246, p. 200.

is made that Sir Francis Younghusband urged the necessity of giving Sind an administration of its own, and I venture to suggest that his views on the subject might be elicited.

§ 10. A glance at the map as re-drawn since 1911 is sufficient to establish the case for Orissa. In that year government decided to reconstitute Bengal on racial and linguistic lines as opposed to religious divisions. In pursuance of the same policy the claims to a separate administration of the Hindi-speaking people of Behar were recognized, and a province was instituted centring on the middle plains of the Ganges Valley, with its northern boundaries resting against the Himalayan ranges of Nepal. Under the thin pretence of giving this province a seaboard, Orissa was thrown in with Behar in cynical disregard of the very principles upon which the whole rearrangement was justified. But as the map shows, the British territories of Orissa are separated from Behar by a wide and mountainous tract of native territories, at its narrowest point 60 miles wide. only real treatment of the subject that appears in these proceedings is the able memorandum of the Andra conference contained in Appendix V. As the Committee found themselves unable to hear the spokesman of this conference in evidence, I hope they will give the closest attention to that paper. To one who has watched the recent proceedings in Paris the scanty thought bestowed on the whole question of race and language in the treatment of India is amazing and disquieting. It is vital for the Committee to remember that all the evidence they have listened to comes from witnesses who have full command of the English tongue. But the vast mass of the people to whom you are giving the vote are strangers to this tongue. That changes should be, so far as possible, gradual and tentative I recognize. But there are limits to the degree to which you can safely graduate changes, for new wine cannot always be put with safety into old skins, least of all when these vessels are a veritable patchwork full of holes and with gaping seams.

§ 11. Provision for the future adjustment of areas is made in clause 12 of the Bill. The effect of a measure like this will be determined by the policy of those who administer it, and their minds will be largely influenced by the terms of the report upon which it is based, except in so far as Parliament may pronounce a definite and different opinion. So much is left to executive regulation that this cannot be done merely by amending the terms of the Bill. On matters of policy upon which Parliament after considering the advice of this Committee hold the Report to be wrong, there should, I submit, be specific instructions laid down. The Report, moreover, contains some equivocal phrases, seed-beds of controversy, which can all be forestalled by a few words of plain definition superimposed by this Committee.

§ 12. The dictum in § 246, p. 200 of the Joint Report, to the effect that redistributions of provincial areas should only be effected 'by process of consent', is a case in point. From whom is consent required? The question is as vital to the whole issue as the question whether the Poles in Silesia can be reunited to their countrymen without the consent of the whole of Prussia. To bring matters to a fine point, is the future claim of Sind to autonomy to depend on a vote of the Bombay Legislature in which the Marathas will have an overwhelming majority. I would earnestly recommend the Committee to advise Parliament that any clear request by the members representing a distinctive racial and linguistic territorial unit for its constitution as a sub-province

only real treatment of the subject that appears in these proceedings is the able memorandum of the Andra conference contained in Appendix V. As the Committee found themselves unable to hear the spokesman of this conference in evidence, I hope they will give the closest attention to that paper. To one who has watched the recent proceedings in Paris the scanty thought bestowed on the whole question of race and language in the treatment of India is amazing and disquieting. It is vital for the Committee to remember that all the evidence they have listened to comes from witnesses who have full command of the English tongue. But the vast mass of the people to whom you are giving the vote are strangers to this tongue. That changes should be, so far as possible, gradual and tentative I recognize. But there are limits to the degree to which you can safely graduate changes, for new wine cannot always be put with safety into old skins, least of all when these vessels are a veritable patchwork full of holes and with gaping seams.

§ 11. Provision for the future adjustment of areas is made in clause 12 of the Bill. The effect of a measure like this will be determined by the policy of those who administer it, and their minds will be largely influenced by the terms of the report upon which it is based, except in so far as Parliament may pronounce a definite and different opinion. So much is left to executive regulation that this cannot be done merely by amending the terms of the Bill. On matters of policy upon which Parliament after considering the advice of this Committee hold the Report to be wrong, there should, I submit, be specific instructions laid down. The Report, moreover, contains some equivocal phrases, seed-beds of controversy, which can all be forestalled by a few words of plain definition superimposed by this Committee.

§ 12. The dictum in § 246, p. 200 of the Joint Report, to the effect that redistributions of provincial areas should only be effected 'by process of consent', is a case in point. From whom is consent required? The question is as vital to the whole issue as the question whether the Poles in Silesia can be reunited to their countrymen without the consent of the whole of Prussia. To bring matters to a fine point, is the future claim of Sind to autonomy to depend on a vote of the Bombay Legislature in which the Marathas will have an overwhelming majority. I would earnestly recommend the Committee to advise Parliament that any clear request by the members representing a distinctive racial and linguistic territorial unit for its constitution as a sub-province

may be taken as a *prima-facie case*, on the strength of which the Secretary of State may appoint a commission of inquiry.¹ Such a declaration will at once answer the queries raised by Mr. Sastri.²

§ 13. The Secretary of State, whose courtesy and patience in eliciting every point of view, including my own, I must gratefully record, will allow me to repeat a remark which I often made to him in India. Having once fixed upon the basic principle of policy, it was, I submitted, a mistake to think that it must be embodied in one hard and fast plan, applicable to all the provinces alike. The great merit of dyarchy lies in its elasticity, its capacity for adaptation to the many and different races of a vast and highly diversified country. I suggested that when you had formulated the right plan for Bengal it was likely, from the nature of the case to be the wrong plan for Bombay. I urged, moreover, that variety in the schemes applied to different provinces would furnish invaluable guidance to the Commission ten years hence. When all the resources of previous inquiry and discussion are exhausted my personal opinion of any proposals, including my own, is largely held in suspense until they have been tested in practice. An ounce of actual experience is worth tons of intelligent reasoning exercised in advance. That is why I so regret that the Report and the Bill have not provided for the trial of sub-provinces, at any rate in Madras with its four distinctive races and languages, while applying the proposals of the Report to Bengal. It is too late to do that now. I would not, as I have said, attempt it at the stage things have reached, if the decision were now laid on myself. But if members will open the map of Assam opposite to p. 291 of the blue book Cmd. 123, they will see that here is the case of a minor province crying out for treatment on the lines of the Joint Address. The Government has reported that the greater part of the area shown in red consists of mountainous tracts peopled by primitive tribes which ought to be reserved from the operation of the scheme. The reforms they say are at present applicable only to two valleys completely separated by a high plateau from 40 miles to over 200 miles in width. And yet it is proposed to clamp these two areas together under one system of elective government, for the sole reason that 'the future constitution of Assam must follow the general lines of the Constitutions

of the other seven provinces'.¹ I commend this sentence as an example of the tendency which ought most jealously to be watched by Parliament when inaugurating the new régime. This iron uniformity is the natural product of a highly centralized autocracy imposed on a vast country from without. It is equally natural that officers who have spent their lives in administering it should come to regard mere uniformity as an end in itself, and this in spite of the fact that they are constantly insisting on the multifarious diversity of conditions in India.

I think the Committee might well consider whether this is not a case for devolution by the provincial government of Assam of the transferred powers to two sub-provinces with executives and elective councils of their own. I should say that the conditions stated in para. 5, p. 291, of the Chief Commissioner's report are substantially met by the kind of scheme outlined in the Joint Address.

§ 14. While members of the Committee have their eyes on this map submitted by the Chief Commissioner of Assam. I would draw their attention to one question of policy which has, I feel, received no treatment in the Joint Report adequate to its future importance. I refer more especially to the narrow red strip dividing the province from the wild tribes to the north of the Indian frontier. The Report recognizes the necessity of reserving the permanent control of territories bordering on the north-west frontier to the Government of India. I am sorry it did not go on to say that such territories must always remain under the control of an authority responsible to the Imperial Government itself. It is much better to say now, before any question is raised, that territories bordering on frontiers which may involve the whole British Commonwealth in war can never be ceded to a future Dominion government in India responsible only to an Indian electorate. I will here refer to what I said on the subject in *Letters to the People of India on Responsible Government*.²

My case is that this policy should be applied to all the northern marches of India, so that the Imperial Government will for ever control the extremities of the live wires which connect Europe and Asia with these frontiers. I myself saw a house, right in the centre of these marches, at a point where an obscure trade route from Tibet debouches on the plains, which for years was inhabited by an enemy alien with no ostensible employment. who was

I myself saw a house, right in the centre of these marches, at a point where an obscure trade route from Tibet debouches on the plains, which for years was inhabited by an enemy alien with no ostensible employment, who was

¹ Cmd. 123, § 5, p. 291.

² See above, viii, p. 398, §§ 2 & 3.

immediately interned at the outbreak of war. I learned from the natives that he was in constant communication with the traders who came through from Central Asia. Frontier questions, moreover, arise from matters of local police administration, which, small as grains of dust, are yet capable of developing dangerous friction wherever the surfaces of great political bodies are in contact. If this reasoning is sound, I submit that the northern strip projected by the Chief Commissioner of Assam should be drawn now as a fence along all the marches of India. It ought to be continued to separate Bhutan, Sikim, and Nepal from the jurisdiction of elective authorities in India, which will presently control the local police.

The case is especially strong for cutting out the mountainous tongue of Bengal in which Darjeeling lies, inhabited as it is by primitive Mongolians of the Bhuddist faith. The mountainous area of Kumaon, west of Nepal, is a single division, absolutely distinct, in its geographical features and the language and race of its people, from the plains which strike the mountain wall like the sands of a shore at the foot of a cliff. A strip reserved to cut off the mountain area would include Sialkot and the great British cantonments of Rawal Pindi. The thing can be done now with a stroke of the pen. A generation hence it may only be done at the cost of a violent controversy. Effect can be given to this policy by inserting in Clause 12, subsection 2, line 2, the words 'or frontier' between the words 'backward' and 'tract'.

8. In particular, do you think—(i) that Ministers should hold office 'during pleasure'—i. e. should be liable to removal if they are unable to support the action decided upon in their Department by the Governor or if they fail to retain the confidence of the Legislature? (Clause 3 (1).)

§ 1. On the question whether ministers should hold office 'during pleasure', I recorded my views in a memorandum on the Joint Report, which, about this time last year, I was invited to prepare for the Departmental Committee presided over by Mr. Charles Roberts. As I have not altered my views on this subject, I here propose to repeat what I then said :

§ 2. 'The problem is to graduate the transition from pure autocracy to responsible government. Two ways of doing this, and two only, have been suggested. The one suggestion

immediately interned at the outbreak of war. I learned from the natives that he was in constant communication with the traders who came through from Central Asia. Frontier questions, moreover, arise from matters of local police administration, which, small as grains of dust, are yet capable of developing dangerous friction wherever the surfaces of great political bodies are in contact. If this reasoning is sound, I submit that the northern strip projected by the Chief Commissioner of Assam should be drawn now as a fence along all the marches of India. § 1. On the question whether ministers should hold office 'during pleasure', I recorded my views in a memorandum on the Joint Report, which, about this time last year, I was invited to prepare for the Departmental Committee presided over by Mr. Charles Roberts. As I have not altered my views on this subject, I here propose to repeat what I then said :

§ 2. 'The problem is to graduate the transition from pure autocracy to responsible government. Two ways of doing this, and two only, have been suggested. The one suggestion

is to make executives responsible for the same things, partly to the Secretary of State and partly to electorates. The other is to create executives responsible for some things to electorates, while leaving the old executives responsible for all other things to the Secretary of State. The argument against the first principle is conclusively stated in Chapter VII of the Joint Report. It is there demonstrated that you cannot make one executive responsible to two authorities without destroying responsibility and bringing government to a standstill. The authors of the Report, therefore, fall back on the only alternative of dividing the functions of government and assigning them to two different executives, the one responsible to the Secretary of State, the other to electors. But in their anxiety to conciliate criticism, they try to mitigate the process by resort to the first principle. Hence the extraordinary complications of a scheme the first requirement of which was simplicity. In their anxiety to graduate the process they plead that, to begin with, ministers though selected from members elected to the legislative council, are not, for the first five years at least, to be responsible to that body. They are to be responsible to the governor, and yet they are not to be so altogether, for they are also to be responsible to the constituencies. This duplication of responsibility is to be procured by the fact that their reappointment will depend on their re-election. When the time comes to make them responsible to the legislative council the change is to be effected by the simple process of transferring to the council the right to withhold their salaries, which, for the first five years, is to be included in the reserved subjects.

§ 3. 'To begin with, a good deal is made of the idea that ministers are to be responsible, not to the legislative councils, but to their constituents. Then, by an easy, but false, transition, the Report slips into talking as though ministers were responsible "to the Indian electorate".¹ As a matter of fact, they will only be responsible to three out of, say, thirty constituencies, or about one-tenth of the electorate. The proposal is bad in principle, because it encourages ministers from the outset to study the interests of their own constituents, instead of feeling that as ministers they are concerned with the interests of the electorate as a whole. The evil will be aggravated where a minister is elected by a communal electorate. A Moslem minister may be felt to have given undue preference to his co-religionists. But

¹ Joint Report, § 222.

is to make executives responsible for the same things, partly to the Secretary of State and partly to electorates. The other is to create executives responsible for some things to electorates, while leaving the old executives responsible for all other things to the Secretary of State. The argument against the first principle is conclusively stated in Chapter VII of the Joint Report. It is there demonstrated that you cannot make one executive responsible to two authorities without destroying responsibility and bringing government to a standstill. The authors of the Report, therefore, fall back on the only alternative of dividing the functions of government and assigning them to two different executives, the one responsible to the Secretary of State, the other to electors. ¹ Joint Report, § 222.

he cannot be called in question at the next election, because every one of his constituents will be Moslems.

§ 4. 'I do not, however, lay great stress on this point, because the intentions of the Report will scarcely be realized in practice. The Report repeatedly lays stress on the fact that there must be a means of harmonizing the action of executive and legislature. In the last resort the executive must be able to overrule the legislature, or else the legislature must be able to change the executive. In the latter case, this is done by a vote of want of confidence, or, in the last resort, by withdrawing supply. And the power to withhold supply for transferred services is granted. The legislature can render the position of ministers untenable whenever the budget comes up to be voted.

§ 5. 'The proposal that after five years ministers may be rendered responsible to the legislature by having their salaries included in the transferred subjects, surely betrays some confusion of thought. The idea is, I suspect, a false analogy from the proposal made in section 204, that the salary of the Secretary of State should in future be voted by Parliament. The object is simply to secure discussion of Indian affairs before the fag-end of the session, when members are jaded and anxious to be off. The Secretary of State will scarcely suggest that he is not now, as a member of the ministry, responsible to Parliament, or that the voting of his salary will make him more so. If Irish secretaries are changed more freely than those of India, it is only because Parliament is more nearly interested in Ireland. Nor am I aware that the positions of Mr. Wyndham and Mr. Birrell were rendered untenable by Parliament refusing to vote their salaries. Both resigned because the ministries to which they belonged would have fallen if they had not.

§ 6. 'The real truth is that a minister is responsible to the ministry of which he is a member. He is only responsible to Parliament as a part of the ministry. If he feels that his duty to his colleagues is no longer compatible with his duty to Parliament and the electorate, he must resign office. So, too, the ministry may ask a colleague to resign because his views or conduct are not compatible with the policy for which they are answerable to the legislature. The executive is a unit, and its existence as such is threatened by one discordant or unacceptable member. A motion to reduce a minister's salary is a common device for raising a debate on some administrative question. Its adoption by Parliament is often the signal for a whole ministry to

he cannot be called in question at the next election, because every one of his constituents will be Moslems.

§ 4. 'I do not, however, lay great stress on this point, because the intentions of the Report will scarcely be realized in practice. where \dot{K} is the rate of change of the capital stock, s is the savings rate, Y is the output, δ is the depreciation rate, K is the capital stock, λ is the adjustment parameter, L is the labor force, L^e is the expected labor force, α is the adjustment parameter, Y^e is the expected output, β is the adjustment parameter, P is the price level, and P^e is the expected price level.

The model is a dynamic system of four equations, which can be written as follows:

$$\dot{K} = sY - \delta K \quad (1)$$

$$\dot{L} = \lambda(L - L^e) \quad (2)$$

$$\dot{Y} = \alpha(Y - Y^e) \quad (3)$$

$$\dot{P} = \beta(P - P^e) \quad (4)$$

where \dot{K} is the rate of change of the capital stock, s is the savings rate, Y is the output, δ is the depreciation rate, K is the capital stock, λ is the adjustment parameter, L is the labor force, L^e is the expected labor force, α is the adjustment parameter, Y^e is the expected output, β is the adjustment parameter, P is the price level, and P^e is the expected price level.

The model is a dynamic system of four equations, which can be written as follows:

resign, or dissolve, as in the famous case of the cordite vote which put the Liberal cabinet out of office for ten years. Parliament seldom, if ever, requires to exercise its right to refuse supply. The knowledge that it can do so in the last resort is enough to force ministers to resign the moment they see that the legislature no longer supports them in office.

§ 7. 'This power the legislative council is to have, so far as the estimates submitted by ministers are concerned.¹ Now, is it intended that during the first five years ministers should retain office if the legislative council rejects their estimates? If so, the scheme is exposed to the main objection which in Chapter VII the Report urges with unanswerable force against the Congress-League scheme. To use their own words: "There is in these proposals no connecting-rod between the executive and the legislative wheels of the machine which will ensure that they will work in unison".² And again, "if the executive attempted to overcome the legislature there would be conflict and agitation; if it gave way, then it would become merely the agent of the legislature and might as well be chosen from and by the legislature at once."³ Can any one doubt that the latter alternative would prevail? In that case the so-called transitional stage when ministers are responsible to three of the constituencies and the legislature cannot withhold their personal salaries, will prove an illusion.

§ 8. 'In practice, therefore, the legislative council will from the outset of the experiment be able to make the position of all or any of the ministers impossible by withholding supply. But what advantage is gained by encouraging the idea at any stage that ministers are individually and not collectively responsible to the legislature? The whole experience of the British and American Commonwealths, in every part of them, points to the principle of unity in the executive. The Report refers to it as one of the lessons of the past in India.⁴ Why ask India, then, to learn the difficult art of self-government in a temporary machine which violates that principle? What harm is done if Indian ministers are encouraged from the outset to realize that there must be unity in all executives to which they belong? And in this respect it matters not whether those executives are responsible to the Secretary of State or to an electorate. On the contrary, there is everything to be gained by training them in the habit of loyalty to each other, and in making

each minister feel that, so long as he remains in office, he stands or falls with his colleagues. At this juncture we are seeking to found constitutional traditions in India. It is surely, therefore, of vital importance to be studiously careful in the language used in an authoritative Report like this.¹

§ 9. I am glad to see that in Clause 3 (1) of the Bill the confusing proposal to make ministers responsible to electors but not to those they elect is abandoned, and that they will hold office 'at pleasure' from the outset. In passing I note that Mr. Welby did not seem to have grasped this fact.²

§ 10. The point, however, has been taken by the Drafting Committee. But, strangely enough, while the Bill provides that ministers should hold office during pleasure, the governor is saddled with the duty of fixing salaries. This surely is exactly the kind of power which ought to be transferred to the legislative councils from the outset. Can any one argue that public order or the interests of the depressed classes are jeopardized if ministers are left to propose the scale of their own salaries, or if the elected councils are left to sanction them? I submit that it is not only better for the councils to have this duty to discharge, but that they can discharge it better than the governor. One great difficulty in transferring authority in India from the British to Indian administrators is the financial transition. The pay necessary to enable an Englishman to live in tropical exile is of necessity far higher than that needed by the Indian administrator in his own country. I think there is a strong case for paying Indian officials who have to live in London more than their European colleagues. But is India to be saddled with the tradition that her own ministers are always to be paid on the scale necessary for Europeans in India? If you put this responsibility on the British governor, he can do nothing else than give European salaries to the minister. It would be more honest to put it in the Bill straight away. The money will be deducted from the fund available for education and other transferred subjects. Then why withhold from the legislative councils the responsibility of deciding what this deduction for emoluments payable to their own ministers ought to be?

Personally I do not share Sir James Meston's hope that ministers will always be whole-time men.³ I should be very sorry to think that a partner in Messrs. Tata's firm or the

owner of a cotton mill could not become minister of education without retiring from business. That India has in the past been governed by professional civil servants is no reason why in the future she should be exclusively governed by professional politicians. This is one of the transitions which the institution of sub-provinces would have made much easier.

I recommend the Committee in Clause (1), line 36, 'to substitute the words 'Legislative council' for 'Governor'.'¹

§ 11. The proposal that ministers should be responsible not to the legislature, but only to their own constituencies, though now dropped, has left serious confusion in its train. It seems to have prevented the authors of the Report, and also the Government of India, from thinking out the all-important question of *the corporate responsibility of the ministry*. Such corporate responsibility is precluded by Clause 3 (3) of the Bill. In a perfectly clear question² Sir John Rees raised the point; but in his replies the witness confused the whole subject with the question whether the executive council and the ministry should be jointly responsible for the acts of both bodies. Another attempt was made by Lord Sinha with a different witness in Questions 1345 and 1346 with the same result. With Mr. Aiyar, however, Lord Sinha succeeded better, and in Question 1589 that witness gave a clear and decided opinion in favour of the corporate responsibility of the Ministry.

§ 12. The confusion which continues to pervade this whole subject has its source in paragraphs 216, 221, 222, and 223 of the Joint Report. Nor do I see how it can be disentangled without first making a clear, unequivocal definition of the relations which are to exist between the executive council and the ministers. Then and then only is it possible to grapple with the no less important task of defining the relation of ministers to each other and to the governor. I must therefore begin by repeating what I wrote to the Drafting Committee on this subject last year:

§ 13. 'To entrust electorates with real powers in certain specific departments, leaving the rest to the existing administrations, is the only way out of the vicious circle, within which India now moves. It means the co-existence of two authorities in the same area, each actuated by different mainsprings, the one responsible for specific functions to Indian electorates, the other responsible to Parliament in

England. . . . To men used only to a highly centralized bureaucracy, the idea of two authorities with separate mainsprings co-existing in one area seemed patently absurd. The term "dyarchy" was applied to mark that absurdity. But the demonstration is unconvincing to those who have lived under the system and seen it in operation. The argument proves too much, for, if it is sound, then the system which actually exists in Switzerland, America, Canada, Australia, South Africa, and a large number of other countries would be logically and practically impossible. In any given part of these States we know as a matter of fact that two authorities do co-exist. Each of those authorities responds to a different electorate—that is to say, a separate mainspring. Not uncommonly those two mainsprings are in actual opposition to each other. In practice the conflict is minimized by the fact that so far as is possible each authority is dealing with different subjects. That is the essence of dyarchy. The separation is always imperfect, and some friction is the natural result. I have yet to hear of a system of government whose various organs work without it. In the federal systems to which I have referred the separate mainsprings are in the last resort harmonized by the constitution, in which there exists a superior authority to which both are amenable, if once it is called into play.

§ 14. There are practical difficulties inherent in dyarchy as there are in applying all principles to practice. No skill can eliminate friction. The artificer's task is so to contrive that the heat generated will not be sufficient to melt the bearings and bring the machine to a standstill. No motor will ever be invented which will leave airmen free of anxiety. The records of any federal country will show the difficulties inherent in dyarchy. That the system will present even greater difficulties when applied to the highly centralized mechanism of India is obvious. But they have to be faced for the simple reason that we are pledged to approach responsible government by stages, and we cannot do so except by specific devolution, which means dyarchy. Dyarchy is inherent in the policy enunciated on August 20, 1917. The difficulties are greatest at the outset. They arise mainly from the system which treats all administrative and many judicial departments as auxiliary to one general administrative corps, which has its representative at the head of each district and division. The local officers of the public works, forestry, medical, or educational departments may not be actually subject to the district officers. But

Dyarchy is inherent in the policy enunciated on August 20, 1917. The difficulties are greatest at the outset. They arise mainly from the system which treats all administrative and many judicial departments as auxiliary to one general administrative corps, which has its representative at the head of each district and division. The local officers of the public works, forestry, medical, or educational departments may not be actually subject to the district officers. But

often, if not usually, the heads of these departments are drawn from the I.C.S. In any case they all take their orders from a government in which no officer of the technical departments ever finds a place. Members of the I.C.S. are the controlling factor in all the provincial governments. This arrangement is, I believe, on the whole the best which could have been devised for India so long as no intention existed of guiding its people towards responsible government. It is the natural development of a system in which every officer is finally responsible to an authority absolutely detached from the people he administers. But to many of these officers this system in which they have spent their whole working lives is as part of the order of nature itself. Administrative changes such as dyarchy involves appear to them almost as proposals to reverse natural laws. . . .

§ 15. 'To objections of this character the Joint Report replies with unanswerable force in the following passage :

"No doubt we shall be told—indeed, we have often been told already—that the business of government is one and indivisible, and that the attempt to divide it into two spheres controlled by different authorities, who are inspired by different principles and amenable to different sanctions, even with the unifying provisions which we have described, is doomed to encounter such confusion and friction as will make the arrangement unworkable. We feel the force of these objections. We have considered them very anxiously, and have sought out every possible means of meeting them. But to those critics who press them to the point of condemning our scheme we would reply that we have examined many alternative plans, and found that they led either to deadlock or to more frequent or greater potentialities of friction. Such destructive arguments, as far as we can discover, are directed not so much against our particular plan, but against any plan that attempts to define the stages between the existing position and complete responsible government. The announcement of August 20 postulated that such stages could be found ; indeed, unless we can find them, it is evident that there is no other course open than at some date or other to take a precipitate plunge forward from total irresponsibility to complete responsibility." ¹

§ 16. 'As an answer to the critics of dualism these words are complete. Why, then, run away from a criticism which will not hold water, and pretend that the plan adopted does

¹ Joint Report, § 241, p. 196.

not erect two governments side by side? Why try to veil the dualism with a thin disguise which can only entangle the feet of those who wear it, and trip them up? We are told that powers are to be transferred to ministers answerable to the legislature and electorate. The rest are to be reserved to executive councils responsible to the Secretary of State. What, then, is the sense of saying that one government is not to "be regarded as official, and one as Indian"? Why ask us to assume "that the machine of government must, as far as possible, be single and not dual, both in its legislative and executive aspects"?¹ Or that "It is highly desirable that the executive should cultivate the habit of associated deliberation and essential that it should present a united front to the outside"?² In all this there is too much faith in the power of words. The signatories of the Report tell us that "by entrusting the transferred portfolios to the ministers we have limited responsibility to the Indian electorate to those subjects in which we desire to give responsibility first. We have done this without now or at any time depriving the Indian element in the government of responsibility for the reserved subjects". And presently they add, "It is our intention that the decisions of the government should be loyally defended by the entire government, but that the ministers should feel responsibility for conforming to the wishes of their constituents." But in years to come the feelings of ministers will be determined by the facts before them, and not by the intentions of the Secretary of State and of the Viceroy recorded in the year 1918. Suppose that the executive council decide that internments are necessary to "the peace and tranquillity of the province", we can say with certainty that in nine cases out of ten, ministers, legislators, and electorates will object. Ministers will oppose the internment in council, and is it in the nature of things that they should defend them in the legislature and constituencies? And if they do, what then of the responsibility which they are asked to fill for conforming to the wishes of their constituents? Responsible government is not merely a question of feeling. It means that at the next election the constituents can deprive ministers of their seats. It also means that, by withholding supply, legislators can render their tenure of office impossible. I venture to predict that the phrases of this Report will not prevail with ministers faced by such situations. They will not defend the action of the executive

² Ibid., § 221.

council in the legislature, but attack it. Why should they defend acts they have strenuously opposed in private, over which the law denies them authority ?

§ 17. 'The position of executive councillors is equally difficult. Let us take a case which may easily and constantly occur. Suppose that the ministry includes two Hindus and one Moslem, and the executive council one European and one Moslem. Let us also suppose that some Moslem master or inspector may become the target of a Press agitation, and ministers may decide to remove him from his post. The executive council, believing the removal to be a grave act of injustice, may vainly endeavour to dissuade ministers. In virtue of the powers transferred to them, ministers persist and the man is removed. The government is attacked in the legislature by the Moslem minority. The Moslem who has been outvoted by his Hindu colleagues has then to decide whether to defend them or resign—a perfectly regular position—because the Hindu Ministers have to reckon with the chance of destroying their own ministry, and take the risk. The executive council, however, are called upon by the standing instructions of the Secretary of State "loyally to defend" a decision made by the votes of two Hindu ministers, to which they object and over which they have no control. Cases will occur in which the members of the executive will feel that it is due to their own self-respect to resign, and no self-respecting successors will be found to take their place. This will be the least objectionable alternative. For if, in practice, executive councillors are found to be willing to retain office and defend in public each and every decision which ministers may make, they will thereby destroy any efficacy the system might have as a training in responsible government. The governor can only use his power to over-rule ministers in extreme cases ; otherwise the representatives of the Secretary of State are to stand by them and justify in public every mistake and injustice against which they have vainly remonstrated in private.

§ 18. 'The whole object of this system should be that electors and legislators should learn to form right judgements of the acts for which ministers are answerable to them, and that ministers should feel that they are called upon to justify their own acts, and so to learn the lesson which, of all others, needs to be learned in India—that of taking responsibility. This device of ordering British officials, against their reason and conscience, to defend each and

Abstract

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

Abstract

Abstract

Figure 1

council in the legislature, but attack it. Why should they defend acts they have strenuously opposed in private, over which the law denies them authority?

§ 17. 'The position of executive councillors is equally difficult. Let us take a case which may easily and constantly occur. Suppose that the ministry includes two Hindus and one Moslem, and the executive council one European and one Moslem. Let us also suppose that some Moslem master or inspector may become the target of a Press agitation, and ministers may decide to remove him from his post. The executive council, believing the removal to be a grave act of injustice, may vainly endeavour to dissuade ministers. In virtue of the powers transferred to them, ministers persist and the man is removed. The government is attacked in the legislature by the Moslem minority. The Moslem who has been outvoted by his Hindu colleagues has then to decide whether to defend them or resign—a perfectly regular position—because the Hindu Ministers have to reckon with the chance of destroying their own ministry, and take the risk. The executive council, however, are called upon by the standing instructions of the Secretary of State "loyally to defend" a decision made by the votes of two Hindu ministers, to which they object and over which they have no control. Cases will occur in which the members of the executive will feel that it is due to their own self-respect to resign, and no self-respecting successors will be found to take their place. This will be the least objectionable alternative. For if, in practice, executive councillors are found to be willing to retain office and defend in public each and every decision which ministers may make, they will thereby destroy any efficacy the system might have as a training in responsible government. The governor can only use his power to overrule ministers in extreme cases; otherwise the representatives of the Secretary of State are to stand by them and justify in public every mistake and injustice against which they have vainly remonstrated in private.

§ 18. 'The whole object of this system should be that electors and legislators should learn to form right judgements of the acts for which ministers are answerable to them, and that ministers should feel that they are called upon to justify their own acts, and so to learn the lesson which, of all others, needs to be learned in India—that of taking responsibility. This device of ordering British officials, against their reason and conscience, to defend each and

every act of the ministers, is one which undermines the ministers' sense of responsibility and throws dust in the eyes of electors. Debate has got to be something more than the art of keeping ministers in office by sophistries. When it loses all efficiency as a means for teaching men to discriminate between right and wrong, the spirit of freedom will perish. You will never nourish its faint beginnings into life by methods like these.

§ 19. "It is no defence against these criticisms to say that I have taken out and quoted together the passages which insist on the unity of the government, without reference to qualifying phrases scattered about these paragraphs. "It is quite true that our plan involves some weakening of the unity of the executive. . . . It would be impossible to attain our object by a composite government so composed that all its members should be equally responsible for all subjects." ¹ And, again, "We are driven . . . to devising some dualism in the executive". ² The matter is not mended by phrases like these. A circle cannot be squared by saying that we are going to make it a little rectangular. You can stand with either foot on opposite principles only while they remain on paper. The moment they are brought into operation the rider will find himself either clinging to one of them, or else on the ground. "The principle of unity within the Indian executives," which the authors of the Report recognized as established in 1894, ³ is just as vital to their own proposals. As there must be unity in the executives responsible to the Secretary of State, so there must be unity in the ministries responsible to the electorates. You cannot by any process of smudging or blurring these responsibilities create any unity worth having between the two. In so far as you divide responsibility you destroy it. The whole secret of organization consists in making it clear what each agent is answerable for, and to whom. For this reason it is of the utmost importance that the forms employed should answer to the facts. In government every act should wear a label showing by whom it is taken and in obedience to whom. The acts of the executive council should show that they are taken in obedience to the Secretary of State, and those of ministers, that they are done in pursuance of the charge laid on them by electorates. Indian electors cannot be expected to carry the schedule of transferred powers in their heads. If the

the economy. The model is a dynamic system of three equations, which can be written in matrix form as follows:

$$\begin{bmatrix} \dot{Y} \\ \dot{K} \\ \dot{L} \end{bmatrix} = \begin{bmatrix} 1 - \alpha - \beta & \alpha & \beta \\ \alpha & 1 - \alpha & 0 \\ \beta & 0 & 1 - \beta \end{bmatrix} \begin{bmatrix} Y \\ K \\ L \end{bmatrix} + \begin{bmatrix} \alpha Y \\ \beta Y \\ 0 \end{bmatrix} \quad (1)$$

where \dot{Y} , \dot{K} , and \dot{L} are the time derivatives of Y , K , and L , respectively. The matrix A is the Jacobian matrix of the system, and the vector b is the constant term. The system (1) can be solved for the steady state values of Y , K , and L .

The steady state values of Y , K , and L are given by the following equations:

$$\begin{aligned} Y &= \frac{\alpha}{1 - \alpha - \beta} \\ K &= \frac{\alpha}{1 - \alpha} \\ L &= \frac{\beta}{1 - \beta} \end{aligned} \quad (2)$$

where α and β are the parameters of the production function. The steady state values of Y , K , and L are independent of the initial values of Y , K , and L . The steady state values of Y , K , and L are also independent of the parameters of the production function. The steady state values of Y , K , and L are determined by the parameters of the production function.

The steady state values of Y , K , and L are given by the following equations:

$$\begin{aligned} Y &= \frac{\alpha}{1 - \alpha - \beta} \\ K &= \frac{\alpha}{1 - \alpha} \\ L &= \frac{\beta}{1 - \beta} \end{aligned} \quad (3)$$

where α and β are the parameters of the production function. The steady state values of Y , K , and L are independent of the initial values of Y , K , and L . The steady state values of Y , K , and L are also independent of the parameters of the production function. scheme is to have educational value, no pains should be spared to remind them which are the acts of government which issue from ministers responsible to themselves. They should issue as the acts of the governor taken on his ministers' advice; while those of the executive council should issue as the acts of the Governor-in-Council. Under this scheme, for no intelligible reason, they are all to issue as the acts of the Governor-in-Council. The form is to be used deliberately to conceal from the elector acts done by his own agent from those done by agents responsible to the Secretary of State. This expedient is calculated to defeat the main object for which the scheme is designed.¹

'Personally, I have no fear of its ever coming into operation. The pretence of unity between these two organs of government is too thin to deceive any one, and I cannot believe that executive councillors or ministers would be found to submit to a position so false.

§ 20. 'In its attempts to reconcile dualism with unity the language of the Report reminds one of the Athanasian Creed. But here we are dealing not with metaphysics but with practical affairs. The mask of unity does not hide the dualism behind. It has only prevented its artificers from seeing how the dangers of dualism could be overcome if they looked them in the face. Such dangers there are unquestionably. The authors of every federal constitution have had to face them. In such areas as New York, Ontario, Victoria, or the Transvaal they have had to provide for the co-existence of separate authorities side by side. But instead of masking the dualism, they emphasized it.

'They never pretended that two governments answerable to different authorities could be one. All their care was spent in making it as clear as possible to each and all, which were the functions, resources, and agents assigned to each. In a word, their systems are designed to show who is answerable for doing whatever is done, and to whom each is answerable. When the introduction of the dual language crept into the schools of Ontario, it was not possible for any one to suggest that the federal government was in fault. The situation would have been far more dangerous if it had been. The whole responsibility clearly rested with the government of Ontario.

§ 21. 'The difficulty of drawing a clear line between the spheres of the two authorities is, of course, no slight one. A perfect demarcation is impossible. The authors of the

Canadian constitution were not sufficiently careful in the matter, and were satisfied to leave a certain amount of overlapping. Forty years later Canadian experience was summed up in the one word of advice tersely given by Sir Wilfred Laurier to the South African Convention: "Beware the pitfall of concurrent jurisdiction."

§ 22. The Feetham Committee faces this question of concurrent jurisdiction under the title of mixed subjects in par. 60, p. 36 of their Report. In that section a procedure appropriate to those subjects is carefully thought out. This procedure appears to assume that the executive council and the ministers will normally deliberate apart on matters which unquestionably belong to their respective spheres. I greatly hope that this will be so, and also that their decisions when promulgated will bear distinctive marks. On this subject, Section viii, p. 4 of the Memorandum of the Secretary of State on the Bill, speaks with tantalizing vagueness: "The new provincial governments are to be of a composite character, and to contain both an official and a non-official, or popular element. On the official side they will be modelled on the existing governments of the Presidencies, which have "council governments". Under this system the government is carried on by a governor assisted by an executive council, and official acts are performed in the name of the "Governor-in-Council". On the popular side the new governments will consist of the governor and of ministers. . . . For the purpose of allotting to each section of this dual government its own sphere of duty the work of the provincial government will be divided into two parts: certain subjects, to be called "transferred subjects", will be administered by the governor acting with the ministers in charge of the subject, while other subjects, to be called "reserved subjects", will remain in charge of the Governor-in-Council."

§ 23. The Committee will note that inverted commas are used to indicate the words 'Governor-in-Council' as a formula. But when we come to the words *the Governor acting with the minister in charge of the subject* no inverted commas are inserted to indicate that this phrase is to be used to distinguish acts done by ministers under transferred powers, from those done by the Governor-in-Council. We are left to conjecture whether the dominating motive is not to be an attempt to mask the dualism inherent in the scheme, by representing the acts of ministers under the same label as those of the executive council, thus leaving

Canadian constitution were not sufficiently careful in the matter, and were satisfied to leave a certain amount of overlapping. Forty years later Canadian experience was summed up in the one word of advice tersely given by Sir Wilfred Laurier to the South African Convention: "Beware the pitfall of concurrent jurisdiction".

§ 22. The Feetham Committee faces this question of concurrent jurisdiction under the title of mixed subjects in par. 60, p. 36 of their Report. In that section a procedure appropriate to those subjects is carefully thought out. This procedure appears to assume that the executive council and the ministers will normally deliberate apart on matters which unquestionably belong to their respective spheres. I greatly hope that this will be so, and also that their decisions when promulgated will bear distinctive marks. On this subject, Section viii, p. 4 of the Memorandum of the Secretary of State on the Bill, speaks with tantalizing vagueness: "The new provincial governments are to be of a composite character, and to contain both an official and a non-official, or popular element. On the official side they will be modelled on the existing governments of the Presidencies, which have "council governments". Under this system the government is carried on by a governor assisted by an executive council, and official acts are performed in the name of the "Governor-in-Council". On the popular side the new governments will consist of the governor and of ministers. . . . For the purpose of allotting to each section of this dual government its own sphere of duty the work of the provincial government will be divided into two parts: certain subjects, to be called "transferred subjects", will be administered by the governor acting with the ministers in charge of the subject, while other subjects, to be called "reserved subjects", will remain in charge of the Governor-in-Council."

§ 23. The Committee will note that inverted commas are used to indicate the words 'Governor-in-Council' as a formula. But when we come to the words *the Governor acting with the minister in charge of the subject* no inverted commas are inserted to indicate that this phrase is to be used to distinguish acts done by ministers under transferred powers, from those done by the Governor-in-Council. We are left to conjecture whether the dominating motive is not to be an attempt to mask the dualism inherent in the scheme, by representing the acts of ministers under the same label as those of the executive council, thus leaving

electors to think that executive councillors are responsible for acts of their own ministers. The dominating motive should be to leave the elector in no doubt whatever as to where the separate responsibility of every separate act rests. I hope the Committee will insist that all acts done in pursuance of transferred powers will be styled, 'The Governor on the advice of his ministers'.

§ 24. In this context I would urge that the legislature should sit under a different name, and, if possible, in a different building when dealing with the two different branches. I would keep the name 'legislative council' for reserved subjects, and call it 'the provincial assembly' when dealing with transferred subjects. And I am strongly in favour of allowing the assembly to elect its own speaker. I would call him by that name. Do let us make up our minds whether we are in for dualism or not. If we are, then let the forms advertise the dualism instead of being used to mask it. Throughout I am thinking how to help the electorates forward on the road to self-government.

§ 25. It is only when the position of the executive council is accurately defined that we can properly consider the relations of ministers to each other and the governor. The untenable proposal in the Report that ministers should be treated as responsible not to the legislature but to their several constituencies, was obviously fatal to the principle of corporate responsibility. That proposal is now dropped. But clause 3 (3) still forbids corporate responsibility in terms. This prohibition is based, I believe, on reasons which have not come before the Committee. It is held by constitutional authorities that between crown colony and responsible government in the Colonies, each minister was held separately responsible to the governor and legislature. Therefore it is argued that India must of necessity tread the same path. But that path was a course of experiment by which men had still to discover the mechanism whereby responsible government can be worked. They had to learn by making mistakes, by testing contrivances which proved unworkable in practice. Responsible government was achieved by discarding them. What service do we render to India by forcing her by statute to make the same mistakes, to retry all the discarded contrivances, when the reasons why they failed are now so clear in the light of actual experience? We are in great danger of worshipping mere precedent, of reading the letter of history instead of understanding its spirit. Precedents are useful as a guide only

electors to think that executive councillors are responsible for acts of their own ministers. The dominating motive should be to leave the elector in no doubt whatever as to where the separate responsibility of every separate act rests. I hope the Committee will insist that all acts done in pursuance of transferred powers will be styled, 'The Governor on the advice of his ministers'.

§ 24. In this context I would urge that the legislature should sit under a different name, and, if possible, in a different building when dealing with the two different branches. I would keep the name 'legislative council' for reserved subjects, and call it 'the provincial assembly' when dealing with transferred subjects. And I am strongly in favour of allowing the assembly to elect its own speaker. I would call him by that name. Do let us make up our minds whether we are in for dualism or not. If we are, then let the forms advertise the dualism instead of being used to mask it. Throughout I am thinking how to help the electorates forward on the road to self-government.

§ 25. It is only when the position of the executive council is accurately defined that we can properly consider the relations of ministers to each other and the governor. The untenable proposal in the Report that ministers should be treated as responsible not to the legislature but to their several constituencies, was obviously fatal to the principle of corporate responsibility. That proposal is now dropped. But clause 3 (3) still forbids corporate responsibility in terms. This prohibition is based, I believe, on reasons which have not come before the Committee. It is held by constitutional authorities that between crown colony and responsible government in the Colonies, each minister was held separately responsible to the governor and legislature. Therefore it is argued that India must of necessity tread the same path. But that path was a course of experiment by which men had still to discover the mechanism whereby responsible government can be worked. They had to learn by making mistakes, by testing contrivances which proved unworkable in practice. Responsible government was achieved by discarding them. What service do we render to India by forcing her by statute to make the same mistakes, to retry all the discarded contrivances, when the reasons why they failed are now so clear in the light of actual experience? We are in great danger of worshipping mere precedent, of reading the letter of history instead of understanding its spirit. Precedents are useful as a guide only

in so far as we take the pains to understand the natural principles they reveal. The principle of corporate responsibility was a discovery we owe to a breakdown in practice of separate responsibility. In every executive there must be unity, as the Report in its earlier and really luminous passages shows.

§ 26. To this it may be answered, 'You have argued that dualism is possible by the careful separation of functions allocated to two different authorities. Does not the argument also apply to the separate portfolios of the ministers?' Now from first to last I have never minimized the difficulties of dualism. I felt those difficulties in the scheme outlined in my letter to Mr. Bhupendra Nath Basu. When I was led to the conclusion that the existing provinces were too bulky for the purpose of a United States of India, I substituted the simple and well-tried process of specific devolution by a provincial government to several authorities with small areas. But I felt it a great additional advantage that the difficulty of two parallel governments with coincident areas was avoided thereby. In spite of the difficulty I felt and feel that the experiment of two governments for one great area is not unworkable and worth trying. But to complicate the experiment of dualism by imposing quadruplicity in one area seems to me madness. For that is what it means if ministers are to have a responsibility which is not only separate from that of the executive council but separate one from the other.

§ 27. I ask the Committee to consider how the plan will operate in practice. On reserved subjects the executive council are normally to deliberate together. Their decisions are those of the majority. They are jointly responsible to the governor, and if one is overruled by the others in matters belonging to his own department and will not submit, he must go.

But are not ministers also normally to deliberate together? Whatever you may say in Acts of Parliament you may take it that they will. I add that they ought to do so, and the result will inevitably be that, on occasion, two ministers will differ from the view held by the third on some point strictly within the scope of his own department. Suppose, for instance, that the minister of education in Madras refuses to throw open all schools to the depressed classes, and his colleagues, supported by a majority in the legislative council, are against him. The governor supports the majority and the minister resigns. His successor must be some one

Abstract

[illegible]

in so far as we take the pains to understand the natural principles they reveal. The principle of corporate responsibility was a discovery we owe to a breakdown in practice of separate responsibility. In every executive there must be unity, as the Report in its earlier and really luminous passages shows.

§ 26. To this it may be answered, 'You have argued that dualism is possible by the careful separation of functions allocated to two different authorities. Does not the argument also apply to the separate portfolios of the ministers?' Now from first to last I have never minimized the difficulties of dualism. I felt those difficulties in the scheme outlined in my letter to Mr. Bhupendra Nath Basu. When I was led to the conclusion that the existing provinces were too bulky for the purpose of a United States of India, I substituted the simple and well-tried process of specific devolution by a provincial government to several authorities with small areas. But I felt it a great additional advantage that the difficulty of two parallel governments with coincident areas was avoided thereby. In spite of the difficulty I felt and feel that the experiment of two governments for one great area is not unworkable and worth trying. But to complicate the experiment of dualism by imposing quadruplicity in one area seems to me madness. For that is what it means if ministers are to have a responsibility which is not only separate from that of the executive council but separate one from the other.

§ 27. I ask the Committee to consider how the plan will operate in practice. On reserved subjects the executive council are normally to deliberate together. Their decisions are those of the majority. They are jointly responsible to the governor, and if one is overruled by the others in matters belonging to his own department and will not submit, he must go.

But are not ministers also normally to deliberate together? Whatever you may say in Acts of Parliament you may take it that they will. I add that they ought to do so, and the result will inevitably be that, on occasion, two ministers will differ from the view held by the third on some point strictly within the scope of his own department. Suppose, for instance, that the minister of education in Madras refuses to throw open all schools to the depressed classes, and his colleagues, supported by a majority in the legislative council, are against him. The governor supports the majority and the minister resigns. His successor must be some one

in harmony with the majority, and will in practice be the choice of his colleagues. Or suppose the reverse, that the minister of education wishes to open the schools and his colleagues supported by a majority are averse to it. If the governor dismisses the minister of education his successor will be practically chosen by his colleagues. But if the governor will not dismiss the minister of education and insists in accordance with Clause 3 (3) in giving effect to his views, his colleagues will both resign and the governor will be faced with an impasse. He cannot constitute a ministry which has the support of the legislature. The thing will not work. It is just one of those ill-designed safeguards which gets into the wheels, breaks the machine and brings it to a standstill.

§ 28. I do not see how in actual working the Governor can from the outset avoid the ordinary and well-tried practice of sending for one man and asking him to choose his colleagues. And when that man resigns the whole ministry should be *ipso facto* out of office. In practice one minister must be premier, and I don't believe the system will work unless he has at least two colleagues. That is why I should regret to see the office of minister made incompatible with the holder pursuing his ordinary occupation.

I recommend that in Clause 3 (3) the words 'his Ministers' be substituted for the words 'the Minister in charge' in line 41, and that in line 2 over the page 'the Minister' be changed to 'Ministers'.

8. (ii). Do you think that the Governor should have power to disregard the opinion of his Ministers if he considers that action in accordance with that opinion is inconsistent with the due discharge of his responsibilities (Clause 3 (3)) ?

§ 1. The answer to this question entirely depends upon the real nature of the responsibilities imposed on the governor. Reserved subjects are not in question. The manner in which mixed subjects should be handled is dealt with in paragraph 60 of the Feetham Report. There are also particular points coming within the scope of transferred subjects, notably in education, in which it may be necessary to reserve to the governor the power of overruling his ministers.¹ Apart from these specific reservations, I hold

¹ Report of the Committee on Functions, § 67.

The American Medical Association is a non-profit corporation organized for the purpose of promoting the interests of the medical profession and the public. It is composed of the members of the American Medical Association, who are organized into local, state, and national associations. The American Medical Association is the largest and most influential of these organizations. It is the only one that is recognized by the federal government as the official representative of the medical profession. The American Medical Association is the only one that is recognized by the federal government as the official representative of the medical profession. The American Medical Association is the only one that is recognized by the federal government as the official representative of the medical profession.

in harmony with the majority, and will in practice be the choice of his colleagues. Or suppose the reverse, that the minister of education wishes to open the schools and his colleagues supported by a majority are averse to it. If the governor dismisses the minister of education his successor will be practically chosen by his colleagues. But if the governor will not dismiss the minister of education and insists in accordance with Clause 3 (3) in giving effect to his views, his colleagues will both resign and the governor will be faced with an impasse. He cannot constitute a ministry which has the support of the legislature. The thing will not work. It is just one of those ill-designed safeguards which gets into the wheels, breaks the machine and brings it to a standstill.

§ 28. I do not see how in actual working the Governor can from the outset avoid the ordinary and well-tried practice of sending for one man and asking him to choose his colleagues. And when that man resigns the whole ministry should be *ipso facto* out of office. In practice one minister must be premier, and I don't believe the system will work unless he has at least two colleagues. That is why I should regret to see the office of minister made incompatible with the holder pursuing his ordinary occupation.

I recommend that in Clause 3 (3) the words 'his Ministers' be substituted for the words 'the Minister in charge' in line 41, and that in line 2 over the page 'the Minister' be changed to 'Ministers'.

8. (ii). Do you think that the Governor should have power to disregard the opinion of his Ministers if he considers that action in accordance with that opinion is inconsistent with the due discharge of his responsibilities (Clause 3 (3)) ?

§ 1. The answer to this question entirely depends upon the real nature of the responsibilities imposed on the governor. Reserved subjects are not in question. The manner in which mixed subjects should be handled is dealt with in paragraph 60 of the Feetham Report. There are also particular points coming within the scope of transferred subjects, notably in education, in which it may be necessary to reserve to the governor the power of overruling his ministers.¹ Apart from these specific reservations, I hold

¹ Report of the Committee on Functions, § 67.

very strongly that the governor should not interfere with decisions of ministers, except by dismissing the whole ministry. In doing so he must consider whether another government can be formed which the legislature will support, or, if not, whether to dissolve the legislature. And if an election returns a House pledged to support the dismissed ministry he is then face to face with the question whether his executive council must resume the whole of the transferred powers together.

§ 2. I am decisively against the governor rejecting the decisions of his ministers except on points specified in his instructions, which points are, in fact, specifically withdrawn from the final responsibility of ministers. For transferred subjects ministers should be held responsible from first to last so long as they are left in their hands. Otherwise the legislature and electorate will never know where the real responsibility rests; and such knowledge is, I maintain, vital to the educational efficacy of the scheme upon which its success or failure will depend. If the governor thinks that a majority in the legislature is not really behind ministers, let him dismiss the ministers. If he thinks that ministers and legislature are combining to override the real wishes of the electorate, let him form a new ministry, if necessary from leaders outside the legislature, and then test the matter by a dissolution. His function *qua* constitutional governor is to hold a final power of attorney for the electorate, which enables him to refer matters to their decision in the last resort.

§ 3. I go so far as to say that I would not treat questions of law and order as removing transferred subjects to the category of mixed subjects. If the governor believes that some policy upon which ministers are resolved will lead to civil disorders, let him record a solemn warning to the effect that, if his fears are justified, the executive council will have to resume the entire administration. Whenever such resumption takes place, let the Secretary of State appoint a commission of inquiry to advise whether it was justified and how long it should be continued. Let the governor advise his ministers, and in serious matters let him record his advice. But so far as final decisions are concerned I am altogether against any interference with the exercise by ministers of transferred powers.¹

§ 4. But I say this assuming that Parliament means, if these powers are so exercised as to bring about a deadlock

¹ See Report of the Joint Select Committee, § 4.

very strongly that the governor should not interfere with decisions of ministers, except by dismissing the whole ministry. In doing so he must consider whether another government can be formed which the legislature will support, or, if not, whether to dissolve the legislature. And if an election returns a House pledged to support the dismissed ministry he is then face to face with the question whether his executive council must resume the whole of the transferred powers together.

§ 2. I am decisively against the governor rejecting the decisions of his ministers except on points specified in his instructions, which points are, in fact, specifically withdrawn from the final responsibility of ministers. For transferred subjects ministers should be held responsible from first to last so long as they are left in their hands. Otherwise the legislature and electorate will never know where the real responsibility rests; and such knowledge is, I maintain, vital to the educational efficacy of the scheme upon which its success or failure will depend. If the governor thinks that a majority in the legislature is not really behind ministers, let him dismiss the ministers. If he thinks that ministers and legislature are combining to override the real wishes of the electorate, let him form a new ministry, if necessary from leaders outside the legislature, and then test the matter by a dissolution. His function *qua* constitutional governor is to hold a final power of attorney for the electorate, which enables him to refer matters to their decision in the last resort.

§ 3. I go so far as to say that I would not treat questions of law and order as removing transferred subjects to the category of mixed subjects. If the governor believes that some policy upon which ministers are resolved will lead to civil disorders, let him record a solemn warning to the effect that, if his fears are justified, the executive council will have to resume the entire administration. Whenever such resumption takes place, let the Secretary of State appoint a commission of inquiry to advise whether it was justified and how long it should be continued. Let the governor advise his ministers, and in serious matters let him record his advice. But so far as final decisions are concerned I am altogether against any interference with the exercise by ministers of transferred powers.¹

§ 4. But I say this assuming that Parliament means, if these powers are so exercised as to bring about a deadlock

¹ See Report of the Joint Select Committee, § 5.

or civil disorder, that the power of recall is to be used without hesitation. I say this because I know that official circles in India cannot really conceive its use. The civil service contains men with more than the average strength of character. Their training is such as to develop that strength, so far at any rate as the details of administration are concerned. But collectively they are amazingly weak. The greatest danger to India and the most formidable obstacle in the path to responsible government is the inherent weakness of the government it now has. And this is simply because the weakest form of government is one which, however autocratic its powers on paper, has not behind it the will of an electorate regularly ascertained. The civil service do not believe in the possibility of resuming powers once transferred, because they do not believe that Parliament really believes in it. I am weighing my words when I say that many of them do not believe that Parliament really means to see them through in the discharge of the grave responsibilities which it leaves on their shoulders. I think they are wrong, but, if I am correct, it is of vital importance that Parliament should leave its agents in no doubt on the matter, and that is why I venture to say this.

§ 5. The Nationalists genuinely believe that, if the power of recall is felt to be real, reactionary officials will create deadlocks and even disorders to bring it about. I am sure that they are wrong. But that is why I advise that any case of resumption of powers by the governor should at once be made the subject of inquiry by a commission appointed by the Secretary of State, the chairman of which should always be some one taken from outside India. If such a commission should find that any official has been guilty of such conduct as the Nationalists fear, the offence should be visited by summary dismissal. That man will have been unfaithful to the best traditions of his service.

§ 6. I would make it clear that a governor will be recalled if he is found to have abused his powers of resumption, or to have failed in anything which might have avoided their use. But I hope that the Committee will be just as emphatic in pronouncing that a governor ought to be recalled who has shrunk from using those powers where they were necessary. Government is the indispensable basis of self-government. You will never found it on anything else.

§ 7. I am against interference with the administration of transferred powers, because it blurs the responsibility. I am all in favour of making those powers as wide as possible,

and therefore I rejoice to see that Mr. Feetham's Committee has advised the transfer of higher education.

§ 8. I am in favour of making the power of recall a reality, because if Parliament is prepared to recall, where failure to the trust is proved, Parliament will also be much more ready to transfer further powers on the least sign that such transfer is justified. The belief that recall will be really used will beget a far deeper sense of responsibility in ministers from the outset. They will think twice before they embark on courses which may lead to either deadlock or disorder. The principle goes right down to the root of these proposals, which rest on the well-tried method of experiment, upon which the constitutional achievements of the British Commonwealth are all based. Experiment means that where failure is proved you are prepared to go back and begin over again, as you are now doing with the Minto-Morley reforms. Unless the authors of this measure really intend that, it is throwing dust in the eyes of the public to profess that they mean to be guided by experience.

§ 9. In question 1338, at the bottom of the second column on p. 74, Mrs. Besant quotes Mr. Montagu as having said: 'So far as transferred subjects are concerned, we shall have parted with our trusteeship and surrendered it to the representatives of the people of India.' The words will be quoted as proving that Parliament has renounced its powers of recall. I think, therefore, that the matter should be settled by a definite pronouncement from this Committee. It is vital that India should not be allowed to think that promises have been made, which have not in fact been made. In all pronouncements on Indian policy it is of crucial importance to avoid language which admits of subtle inferences. The pronouncement made by the Secretary of State on August 20, 1917, is a model to be imitated.

8. (iii). Do you think that the executive council should in all provinces normally consist of one official European and one non-official Indian?

§ 1. I think that every executive council should contain at least one official European and one non-official Indian. I think that there should be a majority of European votes including the governor's casting vote. Beyond this I have no opinion worth offering.

and therefore I rejoice to see that Mr. Feetham's Committee has advised the transfer of higher education.

§ 1. I think that every executive council should contain at least one official European and one non-official Indian. I think that there should be a majority of European votes including the governor's casting vote. Beyond this I have no opinion worth offering.

8. (iv). Do you think that the governor should have power to dissolve his legislative council ?

§ 1. My answer is, Yes.

9. Referring back to questions 2, 3, and 4, if your answers to the first and third of these are in the affirmative, and if you think that the legislatures should be given greater powers of control and influence than they possess at present, do you regard the limitations imposed generally by clause 9 of the Bill upon their financial and legislative powers as (i) suitable, or as (ii) unnecessarily severe, or as (iii) inadequate to safeguard the responsibilities which the government owes in the last resort to Parliament (clause 9) ?

10. In particular, (i) do you think that the legislature should have power with whatever limitations to vote supplies (clause 9 (2)). (ii) Do you accept the plan of grand committees as the means of giving to the government the power to secure essential legislation in the event of their failure to carry their propositions in the council ? If so, have you any modifications of detail to suggest ? If not, what other method would you suggest to secure the object in view ?

§ 1. Sir Harry Stephen found himself unable to distinguish between influence and control.¹ I ask the Committee to recognize the reality of the distinction and also of its practical importance. At this moment the Imperial Government is consciously exposing itself to the influence brought to bear on it through this Committee by spokesmen of the various Indian sections. The minds of ministers and members will be affected by that influence. Can any member who has sat on this Committee after hearing all these witnesses from India doubt that he can now handle it with much greater knowledge ? But you are not sharing with these witnesses the faculty of decision. That rests with Parliament and with no one else, and with it the final responsibility undivided and undiminished. It is just failure to recognize and implement the vital importance of this distinction which has thrown the whole course of Indian reform awry since 1909. That is why, as the earlier chapters of the Joint Report demonstrate, you cannot now build on the foundations then laid.

§ 2. Now, personally, I want to see ministers and elected

1. The first part of the document is a title page. It contains the title of the document, the author's name, and the date of the document. The title is "The History of the United States of America" and the author is "John Adams". The date is "1776".

2. The second part of the document is a preface. It contains the author's introduction to the document and a statement of the author's purpose in writing the document.

3. The third part of the document is the main body of the document. It contains the author's discussion of the history of the United States of America. The author discusses the early history of the United States, the American Revolution, and the formation of the United States government. The author also discusses the challenges that the United States has faced throughout its history.

4. The fourth part of the document is a conclusion. It contains the author's final thoughts on the history of the United States of America. The author concludes that the United States has a bright future and that the American people are the best of people.

members exposed at every point to the advice—that is to say, the influence—of the governor and of his official advisers. But having experienced the effect of that influence, I want ministers and the legislature to feel that the final decision is theirs without reserve, and the final responsibility for its results theirs without qualification. Accordingly, their power of making such decisions must be put as much beyond question as is the power of a provincial government in Canada. The powers of ministers and of the legislature to which they are answerable must be fully commensurate to the functions imposed on them. And my ultimate reason for all this is that the electorate may know for what they are responsible, and also for what they are not. It is only so that electorates can be strengthened for the bearing of heavier burdens.

§ 3. The reason why I think that to begin with certain, and indeed most, functions should be reserved to the existing government, is that if all these functions were at once imposed on electorates too small and too unexercised in the practice of self-government, the burden would break them down, chaos would ensue, and the realization of responsible government would be postponed. Therefore I urged so long ago as 1917 that all functions not specifically transferred should remain in the hands of officials responsible for discharging them to Parliament through the Secretary of State. I urged that in their exercise officials ought to be exposed as far as possible to the influence of Indian opinion. By that I mean that the system should be so devised as to ensure that officials before making decisions should have to hear the opinions of every section of Indians affected thereby. But having weighed those opinions, I mean that the final decision on matters for which officials are held responsible to Parliament must be made by those officials subject to Parliament and its mouthpiece, the Secretary of State; and therefore their power to make those decisions must lie beyond question. It is not merely that Parliament cannot hold them responsible unless the powers it confers are commensurate to the duties it imposes. It is also that the electorates must know what are the matters for which their own representatives are not responsible. Otherwise, as Colonel Pugh pointed out, with true political insight, ministers will be judged, called to office and dismissed from office by reason of their conduct in respect of reserved powers, which involve questions even more contentious than those involved in the powers transferred. They will not be judged,

Otherwise, as Colonel Pugh pointed out, with true political insight, ministers will be judged, called to office and dismissed from office by reason of their conduct in respect of reserved powers, which involve questions even more contentious than those involved in the powers transferred. They will not be judged,

as they should be, solely by reason of their conduct in respect of the powers transferred to their control.¹

§ 4. It is necessary to speak plainly. The source of all this controversy lies in the fact that the Joint Report speaks with two voices on the main issue at stake. I will here repeat what I wrote on the subject to the Drafting Committee last year :

§ 5. 'Parliament is responsible from first to last for the government of India in all its aspects. The pronouncement of August 20 affirms this principle, and the Joint Report, by a series of illuminating quotations,² shows how careful the supreme government has been to assert it, whenever the Government of India or any provincial government has attempted to call it in question. The details of legislation were, for the most part, left to legislatures constituted for this purpose in India. But till 1909 it was made clear that these legislatures must, in the last resort accept the instructions of the Indian executives, which were in turn bound by those of the Secretary of State as the agent and mouth-piece of Parliament. As a further consequence, it was laid down that no member of an executive might publicly question these instructions. "The policy adopted is the policy of the government as a whole, and as such must be accepted and promoted by all who decide to remain members of that government." In these words "the principle of unity within the Indian executives" was asserted. The authors of the Report endorse these views. They assert that "the official government which is still responsible to Parliament" must be able to discharge its responsibility properly.³ To that end provision must be made, if a provincial executive is to be held responsible for the government of the province.⁴ It must be able to get through its legislation on reserved subjects.⁵ The provincial legislature must, in the last resort, have the means of passing whatever laws or voting whatever supplies they deem to be necessary for discharging the duties imposed upon them by Parliament. No less is implied in the quotations made in paragraphs 34, 67, and 68. The argument of Chapter VII against the Congress-League scheme involves that conclusion. . . .

§ 6. 'In paragraph 34 the Report quotes from a dispatch written to Lord Mayo from the Secretary of State in Mr. Gladstone's government the following passage :

' "The Imperial Government cannot, indeed, insist on

as they should be, solely by reason of their conduct in respect of the powers transferred to their control.¹

§ 4. It is necessary to speak plainly. The source of all this controversy lies in the fact that the Joint Report speaks with two voices on the main issue at stake. I will here repeat what I wrote on the subject to the Drafting Committee last year :

§ 5. 'Parliament is responsible from first to last for the government of India in all its aspects. The pronouncement of August 20 affirms this principle, and the Joint Report, by a series of illuminating quotations,² shows how careful the supreme government has been to assert it, whenever the Government of India or any provincial government has attempted to call it in question. The details of legislation were, for the most part, left to legislatures constituted for this purpose in India. But till 1909 it was made clear that these legislatures must, in the last resort accept the instructions of the Indian executives, which were in turn bound by those of the Secretary of State as the agent and mouth-piece of Parliament. As a further consequence, it was laid down that no member of an executive might publicly question these instructions. "The policy adopted is the policy of the government as a whole, and as such must be accepted and promoted by all who decide to remain members of that government." In these words "the principle of unity within the Indian executives" was asserted. The authors of the Report endorse these views. They assert that "the official government which is still responsible to Parliament" must be able to discharge its responsibility properly.³ To that end provision must be made, if a provincial executive is to be held responsible for the government of the province.⁴ It must be able to get through its legislation on reserved subjects.⁵ The provincial legislature must, in the last resort, have the means of passing whatever laws or voting whatever supplies they deem to be necessary for discharging the duties imposed upon them by Parliament. No less is implied in the quotations made in paragraphs 34, 67, and 68. The argument of Chapter VII against the Congress-League scheme involves that conclusion. . . .

§ 6. 'In paragraph 34 the Report quotes from a dispatch written to Lord Mayo from the Secretary of State in Mr. Gladstone's government the following passage :

' "The Imperial Government cannot, indeed, insist on

¹ q. 6194.

² Joint Report, § 34.

³ Ibid., § 240.

⁴ Ibid., § 247.

⁵ Ibid., § 252.

all the members of the Governor-General's Council, when assembled for legislative purposes, voting for any measure which may be proposed, because on such occasions some members are present who are not members of the Government and not official servants of the Crown. But the Act which added these members to the Council for a particular purpose made no change in the relations which subsist between the Imperial Government and its own executive officers. That Government must hold in its hands the ultimate power of requiring the Governor-General to introduce a measure, and of requiring also all the members of his Government to vote for it."

'In these words is affirmed the self-evident proposition that no executive can continue to discharge its functions unless it can in the last instance secure the legislation without which such functions cannot be discharged. In sections 67 and 68 we are told that the same truth was recognized by Lord Dufferin's Committee. "No matter to what degree the liberalization of the councils may now take place, it will be necessary to leave in the hands of each provincial government the ultimate decision upon all important questions and the paramount control of its own policy."

§ 7. 'The authors of the Report frankly endorse these conclusions :

"Upon this point we defer to the experience of history, and we draw from it the plain conclusion that if the government is to be carried on, legislature and executive must in essentials be in harmony. Legislation is a necessary attribute of government, because it is the means by which government secures fresh powers when it feels the need of them for attaining its end. But in the hands of the assembly it may become a weapon to paralyse the government. Whenever the legislature distrusts the executive it can always restrain or control its activities by specific provisions inserted in an Act. There is no clear line between administrative and executive functions, and it would be perfectly open to an assembly which distrusted its executive practically to assume charge of the administration, and, as Lord Bryce says, to reduce its government to the position of a bank staff *vis-à-vis* the directors. That is a position into which no parliamentary government ever allows itself to be forced ; and it would be an impossible position for a nominated government in India. An executive which is independent of its legislature, as the Indian executive have hitherto been, can carry on the government in virtue of authority derived

the information science community. The first of these is the fact that the information science community has a long history of being a community of scholars, rather than a community of practitioners. This has led to a focus on theoretical and methodological issues, rather than on practical issues. The second is the fact that the information science community has a long history of being a community of researchers, rather than a community of teachers. This has led to a focus on research, rather than on teaching. The third is the fact that the information science community has a long history of being a community of students, rather than a community of professionals. This has led to a focus on learning, rather than on professional practice.

These three factors have led to a focus on theoretical and methodological issues, research, and learning, rather than on practical issues, teaching, and professional practice. This has led to a focus on the 'science' of information, rather than on the 'art' of information. This has led to a focus on the 'theory' of information, rather than on the 'practice' of information. This has led to a focus on the 'research' of information, rather than on the 'teaching' of information. This has led to a focus on the 'students' of information, rather than on the 'professionals' of information.

In these words is affirmed the self-evident proposition that no executive can continue to discharge its functions unless it can in the last instance secure the legislation without which such functions cannot be discharged. In sections 67 and 68 we are told that the same truth was recognized by Lord Dufferin's Committee. "No matter to what degree the liberalization of the councils may now take place, it will be necessary to leave in the hands of each provincial government the ultimate decision upon all important questions and the paramount control of its own policy."

§ 7. The authors of the Report frankly endorse these conclusions :

"Upon this point we defer to the experience of history, and we draw from it the plain conclusion that if the government is to be carried on, legislature and executive must in essentials be in harmony. Legislation is a necessary attribute of government, because it is the means by which government secures fresh powers when it feels the need of them for attaining its end. But in the hands of the assembly it may become a weapon to paralyse the government. Whenever the legislature distrusts the executive it can always restrain or control its activities by specific provisions inserted in an Act. There is no clear line between administrative and executive functions, and it would be perfectly open to an assembly which distrusted its executive practically to assume charge of the administration, and, as Lord Bryce says, to reduce its government to the position of a bank staff *vis-à-vis* the directors. That is a position into which no parliamentary government ever allows itself to be forced ; and it would be an impossible position for a nominated government in India. An executive which is independent of its legislature, as the Indian executive have hitherto been, can carry on the government in virtue of authority derived

from without; a party executive can govern because it interprets the will of the people as represented by the assembly; but wherever, as in Canada or Malta, attempts have been made to set up an irremovable executive and a popular assembly, acute conflict has ensued and has resulted in either an advance to popular government or a return to autocracy. "Parliamentary government avoids deadlocks by making the executive responsible to the legislature. Presidential government limits deadlocks because all the organs of the state must ultimately submit. But a legislature elected by the people, coupled with a governor appointed by a distant power, is a contrivance for fomenting dissensions and making them perpetual." We believe that in India, where the two sides are divided by race and also by differences of standpoint, the discord would be much more serious than it has ever been in the Empire's history."¹

§ 8. 'Again and again this position is reaffirmed:

"If responsible government cannot be conceded at once, as, indeed, the scheme implies, and if some measure of responsibility is yet to be given, then means must be found of dividing the sphere of administration into two portions, and for each of these there must be a part of the executive which can in the last resort secure its way from a legislative organ which is in harmony with it; and there must also be means of securing that both halves of the machine work together."²

"Our aim must be to secure to the official executive the power of protecting effectually whatever functions are still reserved to it and to the Government of India, of intervening in all cases in which the action of the non-official executive or council affects them to their serious prejudice. For otherwise the official government which is still responsible to Parliament may be unable to discharge its responsibility properly."³

"We now turn to a consideration of the work of the legislative councils. Assuming that they have been reconstituted with elective majorities, and that the reserved and transferred subjects have been demarcated in the way suggested, let us consider how the executive government is to be enabled to secure the passing of such legislation or such supplies as it considers absolutely necessary in respect of the reserved services. For we must make some such provision if we are going to hold it responsible for the government of the province."⁴

§ 9. ' With such statements of principle before him, the reader naturally looks with some confidence to the practical proposals of the authors for giving effect to them. But what do we find? The executive's ultimate power to pass the legislation it requires depends upon a committee upon which the governor is "to nominate a bare majority exclusive of himself".¹ This can only mean a majority of one, exclusive of the governor's casting vote, in any case a desperately narrow margin of safety considering the vicissitudes of health in India. I have seen a provincial government beaten on a motion owing to the illness of one official. But the governor is bound by further restrictions. "Of the members so nominated no more than two-thirds should be officials." In plain words, a clear majority on the committee are to be members in no way amenable to the governor's authority. A Bill may present a number of contentious points all vital to the government's position.

§ 10. ' We must hold in mind that the measures to which the procedure applies are such as the governor has certified as "essential to the discharge of his responsibility for the peace or tranquillity of the province or of any part thereof, or for the discharge of his responsibility for the reserved subjects". The measure is first discussed by the legislative council. The discussion may make it clear either that a majority or else that the whole of the Indian members are opposed to the measure. It is then to be referred to the grand committee, which is not a standing committee, but a body chosen *ad hoc*. The Report mentions a committee of forty. Its composition would then be as follows :

19 members elected by the elected members by proportional representation.

14 officials.

6 non-officials nominated by the governor.

1 the governor himself.

40

It is, in plain words, to be a body packed by the governor from the minority to overrule the opinion of the majority on the legislative council. Where opinion is divided amongst the elected members of the legislative council, the governor can nominate unofficial members from the minority with some hope of their support. The transferable vote may

¹ Joint Report, § 252.

operate further to strengthen his minority on the grand committee. But even so it is hard to conceive a procedure likely to prove more exasperating in practice.

§ 11. 'There are, however, plenty of cases on record in which every Indian member has voted against the government. In these cases (and they are certain to recur), where is the governor to find the six unofficial members required to pass his measure? It is not, moreover, as though the passage of a Bill depended on a single division. Dozens of amendments can be introduced, any one of which may destroy the utility of the measure. The absence or defection of one or two unofficial nominees at any one of a number of divisions may lead to a breakdown. The authors of the Report are themselves driven to admit the weakness of their own proposal:

"It may be objected that such a grand committee so composed offers the official executive no absolute guarantee that its measure will get through. We agree that this is the case; but there is no such guarantee at present. In a grand committee of forty members there could be fourteen officials, and we consider that no great harm will ensue if government defers legislative projects which are opposed by the whole elected element and for which it cannot secure the support of six out of the seven members whom the governor has in his power to select from the whole body of the non-official members of the council."¹

'A lamer conclusion I have never read. We are told again and again in emphatic language that every executive must in the last resort be able to secure the legislation it requires. In the face of all this, we are now told "that no great harm will ensue if government *defers* legislative projects", when the opposition of the legislators they do not control is too strong for them. And why speak of *deferring* these projects? Another election is scarcely likely to weaken the legislative council's opposition, and then no remedy remains but an ordinance by the Government of India, or else an act of the Imperial Government. Meanwhile, the governor must continue to govern without powers which he solemnly certified to be "essential to the discharge of his responsibility". He will forfeit his own self-respect and deserve to loose that of the public unless he resigns.

§ 12. 'In Section 277 we are told that in provincial matters the affirmative power of the executive can be less decisively used than in Indian matters, and the reason given

¹ Ibid.

operate further to strengthen his minority on the grand committee. But even so it is hard to conceive a procedure likely to prove more exasperating in practice.

¹ Ibid.

the first of these is the fact that the majority of the specimens are of the same sex, and the second is that the majority of the specimens are of the same age. This is a very unusual occurrence, and it is therefore of great interest to the student of human evolution. The third fact is that the majority of the specimens are of the same race, and the fourth is that the majority of the specimens are of the same country. This is a very unusual occurrence, and it is therefore of great interest to the student of human evolution.

The first of these facts is the fact that the majority of the specimens are of the same sex. This is a very unusual occurrence, and it is therefore of great interest to the student of human evolution. The second fact is that the majority of the specimens are of the same age. This is a very unusual occurrence, and it is therefore of great interest to the student of human evolution.

The third fact is that the majority of the specimens are of the same race. This is a very unusual occurrence, and it is therefore of great interest to the student of human evolution. The fourth fact is that the majority of the specimens are of the same country. This is a very unusual occurrence, and it is therefore of great interest to the student of human evolution.

is that provincial matters are less important and the government's responsibility to Parliament not so close. I venture to question both these statements. During the period of transition the governor is to remain responsible for order. That responsibility is second in importance to no other, and therefore, in terms of the Report, it is to be reserved to the governor. Whenever it can be transferred to ministers, the province will be ripe for full responsible government. So long as it is reserved, the governor is responsible to Parliament for maintaining order. The fact that he takes instructions from the Viceroy and the Secretary of State, and not from the Cabinet or Parliament direct, does not affect the position. He is responsible to the British Government for the maintenance of internal order in his province. For the discharge of that all-important function laid upon him, he needs powers no less decisive than those vested in the Government of India for the powers reserved to them.'

§ 13. The opening chapters of this Report in their fearless analysis of history and principle deserve to stand with those of Durham. But, unlike Durham and his great executant Elgin, the authors shrink from the application of their own principles to practice. They follow the argument of Durham and also of Professor Lowell in his masterly verification of Durham's teaching from subsequent experience. The principles of the Minto-Morley reform, as carried to their logical conclusion in the Congress-League scheme, in their earlier chapters is nailed to the counter for all time. Then, breaking new ground of their own, they elect for the principle of specific devolution. Scheduled powers are to be transferred to ministers responsible to elected councils and their electors. All other powers are to be reserved to the official governments responsible to the Secretary of State. But when the highly elaborated mechanism through which these powers are to be exercised, with its wheels turning this way, and its wheels turning that way, comes to be examined it proves to be nothing but an ingenious contrivance for re-introducing in the sphere of reserved subjects the whole principle underlying the Minto-Morley and Congress-League schemes. Behind a screen of grand committees and a council of state the clear principles enunciated in the earlier chapters of the Report are quietly jettisoned.

§ 14. The whole answer to these questions you have put to me depends upon whether you really mean to give your agents the power of decision upon matters in which

is that provincial matters are less important and the government's responsibility to Parliament not so close. I venture to question both these statements. During the period of transition the governor is to remain responsible for order. That responsibility is second in importance to no other, and therefore, in terms of the Report, it is to be reserved to the governor. Behind a screen of grand committees and a council of state the clear principles enunciated in the earlier chapters of the Report are quietly jettisoned.

§ 14. The whole answer to these questions you have put to me depends upon whether you really mean to give your agents the power of decision upon matters in which

you make them responsible to yourselves. I speak to the Committee as the mouthpiece and ear of Parliament in this matter. In reserved subjects where do you mean the power of decision to lie? Do you, in the words of the Joint Report, 'consider that no great harm will ensue if government defers legislative projects which are opposed by the whole elected element', when upon such projects may depend the peace of a province and therefore the peace of India? Why, then, did the Secretary of State and the Viceroy carry their measures the other day in the teeth of every elected member? They cannot plead that the attitude of those members would have differed if they had represented the full franchise projected by the Southborough Committee. The answer is that they believed that they could not discharge the trust laid on them by Parliament unless the elected members were overruled. Why ask, then, that future governors should be placed in a position which they themselves are not willing to accept? It is not proposed that elected members should be asked to take on themselves the responsibilities of the governor when they deny him the power to govern. This contrivance means that the power of final decision is to rest nowhere, and that government is in the last analysis to cease. Nor does it help matters to say that in the last instance you have to fall back upon the Governor-General's power to enact an ordinance. When the friction of deadlock has raised public feeling to the flash-point, the exercise of the Viceroy's last residuary powers is simply equivalent to proclaiming a state of siege, to suspension of the constitution itself, because your constitution has broken down. It is a plain admission that revolution is afoot and can only be met by martial law. The functions of the Viceroy are merged thereby into those of the Commander-in-Chief. I am asking you to give India a constitution which will not break down, because it is one through which government can govern without resort to arms. I urge it because any resort to arms in India disturbs for the time being and for long afterwards the atmosphere in which alone the delicate plant of self-government can grow. You have the warning of Ireland at your doors.

§ 15. The issue has been put squarely in the evidence before you. Lord Islington asked Mr. Banerjee: 'I suppose you would qualify the word "bare" by making it an effective majority?'¹ The answer was 'No. That is to say, it ought not to be such a majority as would in any case

¹ q. 1175.

you make them responsible to yourselves. I speak to the Committee as the mouthpiece and ear of Parliament in this matter. In reserved subjects where do you mean the power of decision to lie? Do you, in the words of the Joint Report, 'consider that no great harm will ensue if government defers legislative projects which are opposed by the whole elected element', when upon such projects may depend the peace of a province and therefore the peace of India? Why, then, did the Secretary of State and the Viceroy carry their measures the other day in the teeth of every elected member? They cannot plead that the attitude of those members would have differed if they had represented the full franchise projected by the Southborough Committee. The answer is that they believed that they could not discharge the trust laid on them by Parliament unless the elected members were overruled. Why ask, then, that future governors should be placed in a position which they themselves are not willing to accept? It is not proposed that elected members should be asked to take on themselves the responsibilities of the governor when they deny him the power to govern. This contrivance means that the power of final decision is to rest nowhere, and that government is in the last analysis to cease. Nor does it help matters to say that in the last instance you have to fall back upon the Governor-General's power to enact an ordinance. When the friction of deadlock has raised public feeling to the flash-point, the exercise of the Viceroy's last residuary powers is simply equivalent to proclaiming a state of siege, to suspension of the constitution itself, because your constitution has broken down. It is a plain admission that revolution is afoot and can only be met by martial law. The functions of the Viceroy are merged thereby into those of the Commander-in-Chief. I am asking you to give India a constitution which will not break down, because it is one through which government can govern without resort to arms. I urge it because any resort to arms in India disturbs for the time being and for long afterwards the atmosphere in which alone the delicate plant of self-government can grow. You have the warning of Ireland at your doors.

§ 15. The issue has been put squarely in the evidence before you. Lord Islington asked Mr. Banerjee: 'I suppose you would qualify the word "bare" by making it an effective majority?'¹ The answer was 'No. That is to say, it ought not to be such a majority as would in any case

¹ q. 1175.

give the governor a majority. It would be a bare majority *which would enable the governor to pass only such measures as were acceptable*. Then on page 234, column 1, Mr. Sastri remarks: 'In the Grand Committee under the Joint Report the elected members and the nominated non-official members together would still be in a very considerable majority over the official members, and therefore, there is preserved this right—it may be academic to a large extent— but a legal right of *refusing government measures* as presented to us in the grand committee.' But whether this legal right is really academic may be judged from the answer given by Mr. Samarth to Mr. Bennett: ¹ 'Is it still the case in India that legislators who have been nominated by the government are under the impression, many of them, that it is their duty to go with the government always and vote with them?' Mr. Samarth's answer was 'No'.

§ 16. I leave aside the opinion of British officials on this subject and turn to the evidence of Lord Carmichael, the most popular governor who has ever ruled an Indian province. When Mr. Montagu asked him: ² 'Do you think that in a province it is wise or necessary to give to the governor an absolute right to pass a law, which not even one of the non-official members of his legislative council will support?' Lord Carmichael replied: 'Yes, I think it is, because if he is a man who would do it wrongly, he ought not to be there'.

§ 17. Here Lord Carmichael touches on a point which deserves the careful attention of this Committee. In another part of his evidence he argues that all governors of major provinces should be brought from outside. I agree with him. I also agree with him in thinking that the success or failure of this great experiment will largely depend upon the quality of the governors who can be found to serve. To me it seems that a man so qualified would have the political insight to say to a Secretary of State: 'If you ask me to make myself responsible to you for the reserved functions, I must be the final judge, until you recall me, of the legislation required to give me the power to discharge them'. I think he would say with Lord Carmichael: 'If you do not think me a fit judge of those powers don't appoint me. At any rate, I will not accept the appointment without them.' On similar grounds Cornwallis refused the appointment of Governor-General in 1786, and Parliament had to give him the necessary powers before he would accept office.

He had the insight to see that the root of Hastings' trouble was not an excess of power, but the fact that he was driven to intrigue by division of authority. As Lord Carmichael says of the grand committee: 'I do not like it altogether, and one of the reasons why I do not like it is that I think it will help to increase the risk of political intrigue'.¹

§ 18. The one clear solution of the whole difficulty is indicated in the able evidence given by Mr. Aiyar. Independent testimony coming from this quarter is so important that I propose to quote it at length. Mr. Aiyar says: ²

'I would oppose the institution of grand committees, especially in view of the suggestions made by the Government of India, which proceed on the erroneous basis of the absence of independent political thought, and on the assumption that every elected member must vote against the government. The disadvantage of the official *bloc* has been perpetuated, and smaller bodies than even the present councils are brought into existence. It has been argued that the grand committee affords scope for persuasion on the part of the elected member, but this process can take place in the council itself without a reduplication of machinery. The grand committee may be abolished, and the governor may assume responsibility for cases needing affirmative legislation, subject to sanction on the part of the Government of India or of the Secretary of State, and the inevitable review of policy by the select committee and commission.'

The Committee will note that Mr. Aiyar was speaking as Vice-President of the All-India Home Rule League and that he says this in his written answer to replies. In oral examination he steadily and repeatedly reinforced his view.³

'If the governor has made up his mind that a particular course is possible, there is no necessity for creating a chamber which is merely bringing into operation what his idea is, and it seems to me that the only argument which was advanced in regard to this matter—namely, the utility of a full discussion before the council, would apply equally well when I say that the conditions of the case may be met by the discussion in the legislative council and the governor taking action after such discussion. Why import a second chamber, especially of the composition suggested by the Government of India, if all that it means is that the government must have its way? Let the governor say so and have done with it.'

When Mr. Bennett asked him :¹ 'Would a grand committee reduce the disfavour with which the action of the government was received?' Mr. Aiyar replied : 'I am afraid not, as it is sought to be constituted. On the other hand, it will give rise to factious spirits in the council tending to create two sets of people, one of whom would be termed the favoured of the government, who are in favour of its policy, and the other being the constituent opponents.'

Tackled once more on the subject next day by Lord Sinha and Lord Middleton, he resolutely maintained his position. Mr. Banerjea also says that if Indian members are not given the power to control legislation on reserved subjects he would prefer the responsibility to rest with the governor outright.² In para. 34 of his minute of dissent, dated March 5, 1919, Sir Sankaran Nair endorses the spirit of this view.

§ 19. The views of Mr. Aiyar are confirmed by the great authority of Lord Carmichael. When the Chairman said to him :³ 'I think this is a most important point. With your experience will you tell us how you see the position of the governor under the proposed scheme?' Lord Carmichael replied :

'I think it would be a much more difficult position, I admit, and I think he would have to exercise his own responsibility more than he does at present. He would not rely as much on his advisers, because after all the governor has very great powers at the present time if necessary, and I think he would have to exercise his powers more in future than he does at present. I am not at all enamoured of the system as proposed of the grand committee ; I am inclined to think that, if not at once, very soon, Indians will begin to think they see through it. It is rather taking a responsibility off the governor and putting it on other people, who are not perhaps as fitted to take the responsibility as the governor is. I do think that in India—and, mind you, I have been a governor in Australia also—though you may say the things are perfectly different—I do think that in India, just because the Indians have not had so much responsibility themselves, they are prepared to see a governor doing what they do not like and to think that very likely he is right to an extent which certainly the Australians would not be.'

Of the grand committee he says⁴ that 'the governor is not the least certain of the nominated members. It seems

to me it is just on the most dangerous occasions when the governor would be in his weakest position there.' In reply to the Chairman he goes on to say that in the position of the governor he would not feel himself sufficiently equipped for the fulfilment, in every case, of the responsibility which Parliament continues to lay upon him. It should be left to the governor to discharge that responsibility. 'Let him do it off his own bat.' The plan of the scheme, he feels, is to conceal the responsibility, not to give him full power to exercise it. 'I do not think we should conceal the responsibility.'¹ It is needless to quote further the evidence in which this important witness continues to enforce his position.

§ 20. Whenever one broaches these views, as I have done many a time in India, to my official friends, they always replied: 'Do you mean we should revert to government by ordinance?' And they seemed to think that I had gone out of my mind. I cannot recall a single official who thought such a thing could be faced.² The Government of India see clearly enough that the grand committees as at present designed will lead to a deadlock. But they cling to the idea of having enough officials subject to secret orders to vote the Indian members down. So long ago as 1841 Sir George Cornwall Lewis uttered a prophetic warning against the danger of mocking a dependency with the semblance of parliaments, when responsibility cannot be conceded. But after-generations, deaf to this warning, created legislatures which they dared not trust with the power of decision, securing the executive by a troop of official members voting under its secret orders. We talk of our influence on the East; but one sometimes wonders whether the East has not a profounder influence on us. Our system in India is overgrown with a tangle of make-believe, and I hope Parliament will tear it down. If, as Englishmen believe, they are of all men the simplest and most honest, then let them realize that the true gifts they have for India are those drawn from their own store. Mr. Aiyar tells you that so long as you retain an element of autocracy in your government of India, she prefers that element to appear as such. It is the only government she has ever known. Do not cover it with a veneer of popular institutions too thin to deceive a child. If you want to make men in India give them verities and not shams.

² See Report of Joint Select Committee, § 7, clause 11.

§ 21. Lord Carmichael refused to be scared by this terrible word 'ordinance'.¹ Now why is this word so useful as a weapon against the advocates of direct methods? The real reason is that 'ordinance' has so far stood for decrees suddenly imposed without previous discussion in detail. Mr. Montagu asked Sir William Meyer:² 'What about an ordinance as contrasted with that form of legislation?' Sir William replied: 'There is all the difference in the world; an ordinance is an autocratic Act of the government. There is no necessary discussion on it, whereas in the Council of State a Bill will be put forward, there will be a select committee, there will be discussion and debate and amendments, and very often, as happens at present, the government may find that it is advisable to accept some of the amendments. That would not arise at all in the case of ordinances.' As the Joint Report itself says³ the power of ordinance 'merely provides a means of issuing decrees after private discussion in the executive council, and without opportunities for public debate or criticism'. Exactly. The odium raised by the word is mainly due to a very natural distrust of edicts issued without any previous discussion in public. It was Lord Dalhousie who saw the mischief of such a practice and put an end to it except for rare and pressing occasions. Let us think for a moment what happens at present when government has to pass unpopular measures. Officials may neither speak nor vote except in accordance with the government orders, but when the governor has made up his mind that a Bill must be carried or that some amendment designed to emasculate it must be rejected, secret orders, which are no secret, are given by him to official members to vote it down. It is a humiliating sight to see the mechanical way in which the hands of the officials go up, when the division is called, and the solemn parade which is made of counting them. The governor might just as well count his own fingers, if it were not for the hazards of fever and dysentery. In the plan before you in the Bill your margin of safety in matters affecting the peace of India will often depend on the reading of a clinical thermometer.

§ 22. There are times when one knows, and the Indian members know, that government divisions would not be won if officials were free to speak and vote. What firm foundation can any system of government find in a hollow pretence like this? To an outsider the thing is a degradation

¹ q. 5789.

³ Joint Report, § 276.

of highly intelligent officials in the presence of their Indian colleagues. But this prostitution of popular government has one really poisonous effect. Year after year British officials are paraded in public as a political party in opposition to Indian Nationalism. The bitter antagonism developed between the British services and educated Indians in the last decade is, I believe, as much due to this cause as to any other. Those who grow up with a sham and get used to it become blind to the mischief it works. How the authors of the Joint Report could have written sections 86 and 87 and then advocate a continuance of this practice on the grand committees and the council of state passes my understanding.¹

§ 23. The point is that the governor now gets his way, and, under the Bill, is to get his way when he can, only by secret orders to official voters. If Parliament decides that there are matters in which he as their agent must get his way, why should he not do it as Mr. Aiyar and Lord Carmichael suggest, by issuing his orders openly and directly? The principle is perfectly plain and easy of application in practical procedure. When a Bill is moved, let a motion that it be not read a second time be prefaced by the words, 'That the governor be requested'. Let all amendments be prefaced by the same words. Then when the governor has made up his mind that he must carry his measure or that he cannot accept an amendment which has been voted by the council, let him say outright that he cannot accept the request, and put his reasons on record.

§ 24. It must be realized that the system here advocated as applicable to legislation on reserved subjects is simply that which already obtains on supply, and which, under the Bill, is still to be applied to votes on the estimates on reserved subjects. I am entirely in favour of the system under which the vote of the legislative council is to be taken on the estimates, and the governor is to take the responsibility of saying whether he accepts the vote or not.² The principle is just the same whether it is applied to money Bills or to ordinary legislative measures. The whole situation is cleared by this honest procedure. In the first place, the Indian members are not forced into artificial solidarity by the presence of a phalanx of European voters. Genuine divisions of opinion have a far better chance of coming to the surface and of being heard. The governor has therefore a far better

of highly intelligent officials in the presence of their Indian colleagues. But this prostitution of popular government has one really poisonous effect. Year after year British officials are paraded in public as a political party in opposition to Indian Nationalism. The bitter antagonism developed between the British services and educated Indians in the last decade is, I believe, as much due to this cause as to any other. Those who grow up with a sham and get used to it become blind to the mischief it works. How the authors of the Joint Report could have written sections 86 and 87 and then advocate a continuance of this practice on the grand committees and the council of state passes my understanding.¹

§ 23. The point is that the governor now gets his way, and, under the Bill, is to get his way when he can, only by secret orders to official voters. If Parliament decides that there are matters in which he as their agent must get his way, why should he not do it as Mr. Aiyar and Lord Carmichael suggest, by issuing his orders openly and directly? The principle is perfectly plain and easy of application in practical procedure. When a Bill is moved, let a motion that it be not read a second time be prefaced by the words, 'That the governor be requested'. Let all amendments be prefaced by the same words. Then when the governor has made up his mind that he must carry his measure or that he cannot accept an amendment which has been voted by the council, let him say outright that he cannot accept the request, and put his reasons on record.

§ 24. It must be realized that the system here advocated as applicable to legislation on reserved subjects is simply that which already obtains on supply, and which, under the Bill, is still to be applied to votes on the estimates on reserved subjects. I am entirely in favour of the system under which the vote of the legislative council is to be taken on the estimates, and the governor is to take the responsibility of saying whether he accepts the vote or not.² The principle is just the same whether it is applied to money Bills or to ordinary legislative measures. The whole situation is cleared by this honest procedure. In the first place, the Indian members are not forced into artificial solidarity by the presence of a phalanx of European voters. Genuine divisions of opinion have a far better chance of coming to the surface and of being heard. The governor has therefore a far better

¹ See Report of Joint Select Committee, § 7, clause 6.

² Ibid., § 7, clause 11.

means of knowing what genuine Indian opinion is before he makes up his mind. The procedure meets the objections which the word 'ordinance' is used to raise. Legislation will be discussed as fully and in as much detail as at present, and with greater freedom.

In the second place, the opinion of the Indian majority comes upon record. Their responsibility for seeing that it is placed before government is properly discharged; thirdly, the governor's responsibility for final decision is plainly shown and made to rest where it ought to rest. By the governor I do not here mean the governor-in-council. I agree with Lord Carmichael that under the new scheme his personal authority should be much more marked. After listening to his official advisers the final responsibility of legislative decisions should rest upon him. He can be recalled. You cannot easily dismiss a whole executive council.

Fourthly, you get rid of the official phalanx of voters once for all. At the same time, the government is left with perfect elasticity as to official speakers. It can call to the council the officials best qualified to enlighten it on the measure before it. The saving of the time of busy British officials is itself an important economy. Moreover, when officials are publicly attacked, it would often be much more satisfactory to every one if they came to the council to defend themselves.

Finally, by this straightforward method you avoid all the ingenious complications of the grand committee with its phalanx of official voters, and the atmosphere of intrigue in which the governor will be involved when he is endeavouring to pack it with Indian members who can be trusted, as he hopes, to save his face.¹

§ 25. The Committee will now readily understand why I endorse the view advanced by nearly all witnesses from India, that in all the larger provinces the governors should be taken from outside the service. India is full of historical survivals which are mere anachronisms. I fail to see any practical reason for maintaining the present contrast between the simplicity of government establishments in the United Provinces and the Punjab and the semi-viceregal pomp with which they are surrounded in Bengal, Madras, and Bombay. I should like to see some mean found between the two, but to have them all put on exactly the same footing in respect of emoluments, ceremony, and everything else. After all, the governor of the United Provinces rules more

Figure 1. The effect of the concentration of the solution on the adsorption of the dye. The concentration of the solution was 0.01, 0.02, 0.03, 0.04, 0.05, 0.06, 0.07, 0.08, 0.09, 0.1, 0.2, 0.3, 0.4, 0.5, 0.6, 0.7, 0.8, 0.9, 1.0, 1.5, 2.0, 3.0, 4.0, 5.0, 6.0, 7.0, 8.0, 9.0, 10.0, 15.0, 20.0, 30.0, 40.0, 50.0, 60.0, 70.0, 80.0, 90.0, 100.0, 150.0, 200.0, 300.0, 400.0, 500.0, 600.0, 700.0, 800.0, 900.0, 1000.0, 1500.0, 2000.0, 3000.0, 4000.0, 5000.0, 6000.0, 7000.0, 8000.0, 9000.0, 10000.0, 15000.0, 20000.0, 30000.0, 40000.0, 50000.0, 60000.0, 70000.0, 80000.0, 90000.0, 100000.0, 150000.0, 200000.0, 300000.0, 400000.0, 500000.0, 600000.0, 700000.0, 800000.0, 900000.0, 1000000.0, 1500000.0, 2000000.0, 3000000.0, 4000000.0, 5000000.0, 6000000.0, 7000000.0, 8000000.0, 9000000.0, 10000000.0, 15000000.0, 20000000.0, 30000000.0, 40000000.0, 50000000.0, 60000000.0, 70000000.0, 80000000.0, 90000000.0, 100000000.0, 150000000.0, 200000000.0, 300000000.0, 400000000.0, 500000000.0, 600000000.0, 700000000.0, 800000000.0, 900000000.0, 1000000000.0, 1500000000.0, 2000000000.0, 3000000000.0, 4000000000.0, 5000000000.0, 6000000000.0, 7000000000.0, 8000000000.0, 9000000000.0, 10000000000.0, 15000000000.0, 20000000000.0, 30000000000.0, 40000000000.0, 50000000000.0, 60000000000.0, 70000000000.0, 80000000000.0, 90000000000.0, 100000000000.0, 150000000000.0, 200000000000.0, 300000000000.0, 400000000000.0, 500000000000.0, 600000000000.0, 700000000000.0, 800000000000.0, 900000000000.0, 1000000000000.0, 1500000000000.0, 2000000000000.0, 3000000000000.0, 4000000000000.0, 5000000000000.0, 6000000000000.0, 7000000000000.0, 8000000000000.0, 9000000000000.0, 10000000000000.0, 15000000000000.0, 20000000000000.0, 30000000000000.0, 40000000000000.0, 50000000000000.0, 60000000000000.0, 70000000000000.0, 80000000000000.0, 90000000000000.0, 100000000000000.0, 150000000000000.0, 200000000000000.0, 300000000000000.0, 400000000000000.0, 500000000000000.0, 600000000000000.0, 700000000000000.0, 800000000000000.0, 900000000000000.0, 1000000000000000.0, 1500000000000000.0, 2000000000000000.0, 3000000000000000.0, 4000000000000000.0, 5000000000000000.0, 6000000000000000.0, 7000000000000000.0, 8000000000000000.0, 9000000000000000.0, 10000000000000000.0, 15000000000000000.0, 20000000000000000.0, 30000000000000000.0, 40000000000000000.0, 50000000000000000.0, 60000000000000000.0, 70000000000000000.0, 80000000000000000.0, 90000000000000000.0, 100000000000000000.0, 150000000000000000.0, 200000000000000000.0, 300000000000000000.0, 400000000000000000.0, 500000000000000000.0, 600000000000000000.0, 700000000000000000.0, 800000000000000000.0, 900000000000000000.0, 1000000000000000000.0, 1500000000000000000.0, 2000000000000000000.0, 3000000000000000000.0, 4000000000000000000.0, 5000000000000000000.0, 6000000000000000000.0, 7000000000000000000.0, 8000000000000000000.0, 9000000000000000000.0, 10000000000000000000.0, 15000000000000000000.0, 20000000000000000000.0, 30000000000000000000.0, 40000000000000000000.0, 50000000000000000000.0, 60000000000000000000.0, 70000000000000000000.0, 80000000000000000000.0, 90000000000000000000.0, 100000000000000000000.0, 150000000000000000000.0, 200000000000000000000.0, 300000000000000000000.0, 400000000000000000000.0, 500000000000000000000.0, 600000000000000000000.0, 700000000000000000000.0, 800000000000000000000.0, 900000000000000000000.0, 1000000000000000000000.0, 1500000000000000000000.0, 2000000000000000000000.0, 3000000000000000000000.0, 4000000000000000000000.0, 5000000000000000000000.0, 6000000000000000000000.0, 7000000000000000000000.0, 8000000000000000000000.0, 9000000000000000000000.0, 10000000000000000000000.0, 15000000000000000000000.0, 20000000000000000000000.0, 30000000000000000000000.0, 40000000000000000000000.0, 50000000000000000000000.0, 60000000000000000000000.0, 70000000000000000000000.0, 80000000000000000000000.0, 90000000000000000000000.0, 100000000000000000000000.0, 150000000000000000000000.0, 200000000000000000000000.0, 300000000000000000000000.0, 400000000000000000000000.0, 500000000000000000000000.0, 600000000000000000000000.0, 700000000000000000000000.0, 800000000000000000000000.0, 900000000000000000000000.0, 10000000

The following table shows the results of the regression analysis for the dependent variable "Attitude towards the environment" (Table 1). The independent variables are "Age", "Gender", "Education", "Income", "Occupation", "Marital status", "Religion", "Political affiliation", "Social media usage", and "Environmental awareness". The table includes the coefficient, standard error, t-statistic, and p-value for each variable.

than twice as many people as the governor of Bombay. But an end should be put once for all to an idea which undoubtedly exists that governors are occasionally chosen, not for their fitness to rule an Indian province, but because they are not wanted in England. Such appointments, if made, are nothing more nor less than subordination of Indian to British interests on the part of the government which makes them. India should not be the lumber-room of English political society.

§ 26. I should very much like to see experienced Dominion statesmen included in these appointments, for they have what British politicians have not—experience of provincial self-government.

§ 27. I am not shutting my eyes to the effect on the Service of depriving its members of the principal prizes to which they have looked. I think it may have a most serious effect on recruitment if great conspicuous figures like Sir Bartle Frere, Sir Alfred Lyall and Sir Anthony Macdonnell are a thing of the past. The Commonwealth cannot, moreover, afford to place men of this calibre on the shelf at fifty. I am strongly of opinion that the Dominion governments in Imperial Conference should be asked to approve of the principle of opening existing governorships to them. And when an Indian civilian has served a successful term as the constitutional governor of New Zealand or of an Australian State, I should like to see him regarded as eligible for an Indian governorship. Such an experience will make a great difference in the outlook of an Indian civilian, and with it I should say he would make an Indian governor of the most valuable type. He will certainly be more useful on the Government of India.

§ 28. Certain details of procedure remain to be sketched. I have already suggested that the body of legislators when dealing with reserved subjects should be called the 'legislative council', and when dealing with transferred subjects the 'provincial assembly'. I have also said that I should like to see the assembly elect its own speaker. I should like it to frame its own standing orders, subject to the governor's approval. I do not think the governor should enter it except to open it and on special occasions. Members of the executive council might have the right to call officials into its councils at their own discretion.

§ 29. I should like to see the governor nominate the fittest person he can find, whether inside or outside the legislative council, to preside over it. He himself should have

I do not think the governor should enter it except to open it and on special occasions. Members of the executive council might have the right to call officials into its councils at their own discretion.

§ 29. I should like to see the governor nominate the fittest person he can find, whether inside or outside the legislative council, to preside over it. He himself should have

a seat apart, from which he can constantly watch the proceedings, as a rule taking the chair only to announce when he cannot accept a resolution. He would thus be kept so far as possible outside the area of controversy, entering the scene only in a rather solemn way to discharge his responsibility of final decision against the opinion of the majority. Measures within the scope of reserved or mixed subjects should begin with the words 'Be it enacted by the governor', those on transferred subjects 'Be it enacted by the governor by and with the advice of the provincial assembly'. Indians will thus know whose fiat they are obeying in each case.

§ 30. On the kindred matter of the joint or separate purse, I will here quote what I wrote to the Drafting Committee :

'Nowhere is this maxim (beware the pitfall of concurrent jurisdiction) more important than in the sphere of revenue, for defects of government have a way of revealing themselves in terms of finance. Where you have two collateral authorities it is vital to define their several responsibilities, and it is largely by distinguishing their respective resources that this definition is achieved. If limited functions are assigned to an authority with a separate mainspring, it is of vital importance to see that the resources upon which that authority can draw are limited with equal or even with greater accuracy. And this is of cardinal importance where the mainspring is electoral, and especially when, as in this case, the authority to which all other powers and resources are reserved is not also responsible to an electorate. The whole art of responsible government is achieved by the hard process of learning that you cannot have the moon by crying for it, that the ends you desire must be accommodated to your means. Nowhere can this hard lesson be learned so pointedly or so quickly as in the field of finance. What would happen indeed if no definite resources were assigned to municipal or district councils, and if they and their electorates were left to feel that their annual programme was only limited by what they could squeeze out of the general government? The main value of the system, as a school of responsible government, lies in its efficacy in making the municipal electorates see that their programme of public services must depend on the sacrifice they are prepared to make in their private resources.

§ 31. In passing, it is worthy of remark that those who denounce dyarchy as impossible usually advise as an alternative the complete responsibility of municipal and district councils. They overlook the fact that this is itself

§ 31. In passing, it is worthy of remark that those who denounce dyarchy as impossible usually advise as an alternative the complete responsibility of municipal and district councils. They overlook the fact that this is itself

an example of dyarchy on a smaller scale. In the case of municipal and district councils the problem has been solved by a method well known in India as settlement, an example of which will be found in the so-called contracts made in 1914 between those bodies and the government of the United Provinces. The term and the method by which they are made are alike drawn from the experience gained in distinguishing the resources assigned to the provinces on the one hand and to the Government of India on the other. The origin and evolution of these quasi-permanent settlements between the Indian and provincial governments is described in the fifth chapter of the Joint Report. Up to 1861 all revenues whatsoever were credited to the Government of India. That Government doled out what it chose to the provinces. The provinces wrung what they could from the Government of India. We are told on the contemporary authority of Sir Richard Strachey that 'the distribution of the public income degenerated into something like a scramble in which the most violent had the advantage, with very little attention to reason. As local economy brought no local advantage, the stimulus to avoid waste was reduced to a minimum'.¹ The officers who scrambled and showed violent unreason and so little zeal to avoid waste when placed in this position were all the highly trained and educated British subordinates to the Secretary of State. Yet that is the very position in which the Report now proposes to place the executive councillors and ministries, the one mainly European and responsible to the Secretary of State, and the other Indian amateurs in government responsible to an Indian electorate. The rich experience of India in the need for and methods of making such quasi-permanent settlements is set aside. The functions assigned to the ministries are to be determined on the advice of commissions directly responsible to Parliament, and to be revised from time to time by the same machinery. But not so the resources to be assigned to them. Those are to be left to an annual scramble between the executive council and the ministers which must develop into an open conflict with the legislative council, a conflict which can only be resolved by the personal fiat of the governor. But the governor will already be identified with the apportionment framed by the executive council. It is no rash prediction that under this system every governor will have every year to use his extraordinary powers to overrule not only the

The term and the method by which they are made are alike drawn from the experience gained in distinguishing the resources assigned to the provinces on the one hand and to the Government of India on the other. The origin and evolution of these quasi-permanent settlements between the Indian and provincial governments is described in the fifth chapter of the Joint Report. Up to 1861 all revenues whatsoever were credited to the Government of India. That Government doled out what it chose to the provinces. The provinces wrung what they could from the Government of India. We are told on the contemporary authority of Sir Richard Strachey that 'the distribution of the public income degenerated into something like a scramble in which the most violent had the advantage, with very little attention to reason. As local economy brought no local advantage, the stimulus to avoid waste was reduced to a minimum'.¹ The officers who scrambled and showed violent unreason and so little zeal to avoid waste when placed in this position were all the highly trained and educated British subordinates to the Secretary of State. Yet that is the very position in which the Report now proposes to place the executive councillors and ministries, the one mainly European and responsible to the Secretary of State, and the other Indian amateurs in government responsible to an Indian electorate. The rich experience of India in the need for and methods of making such quasi-permanent settlements is set aside. The functions assigned to the ministries are to be determined on the advice of commissions directly responsible to Parliament, and to be revised from time to time by the same machinery. But not so the resources to be assigned to them. Those are to be left to an annual scramble between the executive council and the ministers which must develop into an open conflict with the legislative council, a conflict which can only be resolved by the personal fiat of the governor. But the governor will already be identified with the apportionment framed by the executive council. It is no rash prediction that under this system every governor will have every year to use his extraordinary powers to overrule not only the

¹ Joint Report, § 105.

ministers but also the legislative council. He is placed in the cruel position of having to decide once a year an issue to which he is a party, in a manner which touches popular feeling at its most delicate point. Every year his justice will be impugned. He will be made the target of public execration in the legislature, on the platform, and in the press. This does not matter to a periodic commission appointed by the Secretary of State. They have no personal interest in the division of the revenues, and no permanent authority to be weakened by personal attacks.

§ 32. 'A more potent device for embroiling the two authorities with each other, or for antagonizing the British Government and the Indian electorate, can scarcely be imagined. But an even worse feature of the system is its tendency to distract ministers, legislators, and the electorate from the business of self-taxation. Their energies will be directed to squeezing the governor and his executive council. The proposal is one which puts a premium on leaders with a genius for baiting the officials. I have said elsewhere, and I take this opportunity of affirming, that Indian electorates, legislators, and ministers will not begin to learn the elements of responsible government until they have acquired the habit of taxing themselves.

§ 33. 'The arguments in paragraph 256 against the obvious expedient of periodic settlements framed by an authority independent of both parties are perhaps the least convincing in the whole Report. Strangely enough, it admits that 'the transferred services are generally those which stand in greater need of development'.¹ The converse must therefore be true, that it is much easier to say from experience what proportion of the existing revenue should be allocated to the reserved subjects. The problem presents no greater difficulties than those which had to be faced in framing the existing quasi-permanent settlements between the provinces and the Government of India. To effect a final and complete separation between Indian and provincial finance as proposed in the Report is a far more formidable task than to make periodic divisions of revenue correlative to the reserved and transferred powers. In section 210 it is contemplated that certain sources of new taxation must be appropriated to the provinces. These should, of course, be divided between the executive council and the ministry. Both executives should be made to feel that they cannot

§ 33. 'The arguments in paragraph 256 against the obvious expedient of periodic settlements framed by an authority independent of both parties are perhaps the least convincing in the whole Report. Strangely enough, it admits that 'the transferred services are generally those which stand in greater need of development'.¹ The converse must therefore be true, that it is much easier to say from experience what proportion of the existing revenue should be allocated to the reserved subjects. The problem presents no greater difficulties than those which had to be faced in framing the existing quasi-permanent settlements between the provinces and the Government of India. To effect a final and complete separation between Indian and provincial finance as proposed in the Report is a far more formidable task than to make periodic divisions of revenue correlative to the reserved and transferred powers. In section 210 it is contemplated that certain sources of new taxation must be appropriated to the provinces. These should, of course, be divided between the executive council and the ministry. Both executives should be made to feel that they cannot

¹ Joint Report, § 255.

exceed their fixed assignments without having to face the ordeal of proposing new taxation.

§ 34. 'For reasons which are not touched upon in this Report, the want of elasticity in provincial revenue in regions where the permanent settlement does not obtain is, I believe, greatly exaggerated. In 1812 90 per cent. of the unearned increment accrued to the state. In the course of the last century the proportion of the unearned increment collected by the state has been steadily reduced until it is now less than 50 per cent.

'But this is not all. Where the produce of the land has increased since the last settlement by more than a certain percentage, the settlement officers are instructed by the revenue department of the Government of India to cut their assessment down to a certain figure. I was assured by one settlement officer that, acting under the orders of this department, he was obliged to sacrifice lakhs of revenue which would have accrued to the state had he been free to place a full and fair valuation on the land.

'The amount of revenue which would otherwise have accrued to the state has thus been reduced by the revenue department of the Government of India in two ways. In the first place, the proportion of the net assets collected has been reduced from time to time from 90 per cent. to less than 50 per cent. In the second place, where the increase in value has been exceptionally rapid it has been written down in the books of the government. The annual loss to the public revenues must have amounted to very many crores of rupees. I doubt whether the benefit has in any sensible degree accrued to the classes who actually cultivate the land. Broadly speaking, it has gone to swell the rentier class of non-producers. In the ryotwari districts the produce of the land is in theory divided between the cultivator and the state. The reduction in the proportion of revenue taken by the state has been so great that the former ryot has in many cases been able to sublet his holding to another cultivator, the rent sufficing to support him in idleness after he has paid the amount due to the treasury. In Madras I am told these ryotwari tenures are freely purchased as investments by vakils, banias, and men of means who have no idea of cultivating the land themselves. They freely change hands in the property market. In so far as this happens, the intention of the ryotwari system, as devised by Munro, is defeated. Through the steady and progressive reduction in the proportion of revenue collected by the state,

exceed their fixed assignments without having to face the ordeal of proposing new taxation.

Abstract

Abstract

[illegible]

a middleman, revenue collector, or landlord indistinguishable in practice from the zamindar, has slipped in between the cultivator and the treasury. The system of ryotwari is, in fact, degenerating into that of zamindari.

‘In reading the minutes of the revenue department of the Government of India, one gets the impression that its chief concern is to keep down the revenue. The reason lies in the consciousness on the part of alien rulers of their own weakness in governing a people even so submissive as those of India. As Lord Cromer said, such a system can only maintain itself at all by providing government on the cheapest possible terms. Hence the policy of keeping down the revenue collected from land to the lowest possible limits has become the fixed tradition of the revenue department.

§ 35. ‘These vast remissions of revenue have not been made by Parliament. It would be interesting to know whether the successive reductions were actually ordered by the Secretary of State or after full consideration in executive council by the Government of India. One would scarcely be surprised to find that the pressure on settlement officers to keep down the valuations originated only in minutes from the revenue department. But certain it is that they have not been made by any legislature, nor as the result of any discussion in open debate. In this matter the Government of India, with or without direct orders of the Secretary of State, has acted in its capacity as the ultimate landlord of all British India which is not permanently settled, and also as a landlord of the most indulgent kind. These vast remissions of revenue have been made by virtue of orders issued in the privacy of the revenue department of the central government.

§ 36. ‘The signatories to the Report advise that the whole proceeds of the land revenue should now be transferred to the provincial governments. In examining the arguments against this course, they say : We are told that in the days of dawning popular government in the provinces, it would be well that the provincial government should be able to fall back on the support of the Government of India (as, if the heads were still divided, it would be able to do) when its land revenue policy was attacked. But it is just because divided heads are not regarded as merely a financial expedient, but are, and so long as they survive, will be, viewed as a means of going behind the provincial government to the Government of India, that we feel sure that they should be abolished. We propose, therefore, to make land

revenue, together with irrigation, wholly provincial receipts.¹

‘From these words the intention must be understood to be that in future the revenue department of the Government of India, which has hitherto dictated the land-revenue policy of the provinces, will, in future, have nothing to say to it. With this conclusion I broadly agree, but the treatment of the problem is scarcely equal to its gravity. There is vastly more in the land-revenue policy of India than the mere collection of money, and one cannot but feel that the main issues involved should have been set out. It is the standing defect of official papers in India that they are written by experts for experts, who are presumed by the writers to be fully cognizant of the system as a whole, with all its implications. They resemble financial disquisitions written for bankers by bankers. The great merit in this Report is that so little previous knowledge is required in the readers. But the passage under discussion is an exception, and I do not feel sure that its authors quite faced the issues for themselves. I propose, therefore, to raise a few questions which suggest themselves to one with a cursory knowledge of this most technical subject.

§ 37. ‘To begin with, are there no limits to the devolution of authority which can be delegated to provincial governments in the matter of land revenue? The devolution proposed is, of course, to the governor-in-council of the province, and not to the new popular governments, and the control of the land revenues is presumably one of the last functions which would be transferred to elective authorities. But is the governor-in-council to have power to commit his province to the permanent settlement? We have only to look at Bengal to see how disastrous the step would be, not merely on financial grounds, but still more to the social condition of India. But no step would appear to be more popular, for the reason that those who would profit by it are so large a part of the relatively small class who have formed and can express a public opinion. And let it be realized that to decide this question now is to take the decision for ever out of the hands of electorates large enough to speak for the people as a whole, such as it is hoped will in time be brought into existence. Essentially the question of the permanent settlement is one not to be touched until India is ripe for full responsible government.

§ 38. ‘There are limits, therefore, to the freedom in the

The departments are: the Department of Education, the Department of Legislation, the Department of Public Health, the Department of Research, the Department of Statistics, the Department of Training, the Department of Welfare, and the Department of Work. Each department is headed by a director who is responsible to the board of directors. The board of directors is composed of representatives from each of the departments and from the local associations. The board of directors is responsible for the general management of the association and for the appointment and removal of the directors of the departments. The association is organized into a number of local associations, each of which is responsible for the promotion of the interests of the medical profession and the public in its own locality. The local associations are organized into a number of departments, each of which is responsible for a specific function. The departments are: the Department of Education, the Department of Legislation, the Department of Public Health, the Department of Research, the Department of Statistics, the Department of Training, the Department of Welfare, and the Department of Work. Each department is headed by a director who is responsible to the board of directors. The board of directors is composed of representatives from each of the departments and from the local associations. The board of directors is responsible for the general management of the association and for the appointment and removal of the directors of the departments.

revenue, together with irrigation, wholly provincial receipts.¹

‘From these words the intention must be understood to be that in future the revenue department of the Government of India, which has hitherto dictated the land-revenue policy of the provinces, will, in future, have nothing to say to it. With this conclusion I broadly agree, but the treatment of the problem is scarcely equal to its gravity. There is vastly more in the land-revenue policy of India than the mere collection of money, and one cannot but feel that the main issues involved should have been set out. It is the standing defect of official papers in India that they are written by experts for experts, who are presumed by the writers to be fully cognizant of the system as a whole, with all its implications. They resemble financial disquisitions written for bankers by bankers. The great merit in this Report is that so little previous knowledge is required in the readers. But the passage under discussion is an exception, and I do not feel sure that its authors quite faced the issues for themselves. I propose, therefore, to raise a few questions which suggest themselves to one with a cursory knowledge of this most technical subject.

§ 37. ‘To begin with, are there no limits to the devolution of authority which can be delegated to provincial governments in the matter of land revenue? The devolution proposed is, of course, to the governor-in-council of the province, and not to the new popular governments, and the control of the land revenues is presumably one of the last functions which would be transferred to elective authorities. But is the governor-in-council to have power to commit his province to the permanent settlement? We have only to look at Bengal to see how disastrous the step would be, not merely on financial grounds, but still more to the social condition of India. But no step would appear to be more popular, for the reason that those who would profit by it are so large a part of the relatively small class who have formed and can express a public opinion. And let it be realized that to decide this question now is to take the decision for ever out of the hands of electorates large enough to speak for the people as a whole, such as it is hoped will in time be brought into existence. Essentially the question of the permanent settlement is one not to be touched until India is ripe for full responsible government.

§ 38. ‘There are limits, therefore, to the freedom in the

¹ Joint Report, § 203.

land question which can be afforded to provincial governments at this juncture. If, however, the quota due to the Government of India be made a first charge on provincial revenues, the limits may be wide. But in what form are the provincial governments' orders to the officers assessing and collecting the revenue to be put? In a pure bureaucracy it is a natural characteristic that many matters of high policy should be settled by executive minutes, which in self-governing countries no one would think of settling except in an Act of the legislature. In India, for instance, there are no education Acts. These delicate issues are all decided in executive resolutions. The substitution of laws passed by the legislature for minutes passed by executives is one of the changes which will mark the progress of India from pure autocracy to responsible government. And this must surely begin in the realm of finance, even in matters reserved to executive councils. I have urged the unwisdom of leaving the division of revenues between the executive council and ministries to an annual wrangle, and have argued for settlements made by a commission independent of both. But the settlement can only be periodic, because further functions are to be transferred from time to time. The share of funds available for transfer will largely depend upon the yield of the land revenue. There is every reason, therefore, in favour of encouraging the legislative councils to discuss the instructions to be given to settlement officers upon which the growth of the main item in the public revenues depends. Such discussions will soon teach the councils and electorates that there are two sides to the question, and that further alienation of the public rights in favour of private land owners can only take place at the expense of the interest they represent. Here is an excellent example of the real process by which India can be prepared for responsible government. I would urge, therefore, that in future the land revenue policy of the provincial government should be expressed in legislative form.¹

§ 39. In a study of the land revenue system which I hand in to the Committee,² I have produced evidence which suggests that in comparison to its wealth, no other great country is so cheaply governed as India. Personally I think India has seriously suffered from this over-cheapness, more especially in the sphere of education. I am convinced that

no economies which can be effected in reserved subjects will supply a fraction of the fund necessary to educate India. The steady reduction in the percentage of increment taken by Government from the land proves that the fund is there. But it will never be really tapped except by self-imposed taxation, and this is one reason why I feel no time is too soon to place the whole burden of education frankly in the hands of governments responsible to electorates. The Committee will note that I am merely endorsing the view expressed by Mr. Aiyar.¹

§ 40. I well know the dread with which Indian Nationalists regard the prospect of having themselves to impose taxation. It appears in every line of the 8th and 9th sections of Sir Sankaran Nair's minute of April 16, 1919. The Sanjiwani in Calcutta cried out against the Joint Address on its first appearance that 'This plan of leaving to provincial (State) governments certain specific powers of taxation would make such governments unpopular'. I know it, and my Indian friends will bear with me if I repeat what I have said to them from the outset, that the first green blade of responsible government will be seen rooted in Indian soil when an Indian ministry is found to face this unpopularity. Such men may fall. They will fall to rise again. But it is well-nigh impossible for ministers to come to this point so long as you enable taxpayers to say that had ministers done their duty they would have wrung it out of the reserved estimates.

§ 41. I happen to be able to bring a little first-hand experience to bear on this question. When I first took charge of the department which dealt with local authorities under the crown colony government of the Transvaal I found they were mainly dependent on government grants. Their whole energies seemed directed, not to administration, but to clamouring at the doors of the department. Their total demands added together would soon have reduced the government to bankruptcy. They seemed to have no kind of interest in economy or self-help. I persuaded the government to fix their grants on definite principles and give them a system of local taxation. The change which occurred when they recognized that this was final was remarkable. Instead of holding out their hands to the government in every little difficulty they turned to and set matters right for themselves. But what was even more striking was the improvement which took place in their relations with government. The moment their resources were defined

Abstract

no economies which can be effected in reserved subjects will supply a fraction of the fund necessary to educate India. The steady reduction in the percentage of increment taken by Government from the land proves that the fund is there. But it will never be really tapped except by self-imposed taxation, and this is one reason why I feel no time is too soon to place the whole burden of education frankly in the hands of governments responsible to electorates. The Committee will note that I am merely endorsing the view expressed by Mr. Aiyar.¹

§ 40. I well know the dread with which Indian Nationalists regard the prospect of having themselves to impose taxation. It appears in every line of the 8th and 9th sections of Sir Sankaran Nair's minute of April 16, 1919. The Sanjiwani in Calcutta cried out against the Joint Address on its first appearance that 'This plan of leaving to provincial (State) governments certain specific powers of taxation would make such governments unpopular'. I know it, and my Indian friends will bear with me if I repeat what I have said to them from the outset, that the first green blade of responsible government will be seen rooted in Indian soil when an Indian ministry is found to face this unpopularity. Such men may fall. They will fall to rise again. But it is well-nigh impossible for ministers to come to this point so long as you enable taxpayers to say that had ministers done their duty they would have wrung it out of the reserved estimates.

§ 41. I happen to be able to bring a little first-hand experience to bear on this question. When I first took charge of the department which dealt with local authorities under the crown colony government of the Transvaal I found they were mainly dependent on government grants. Their whole energies seemed directed, not to administration, but to clamouring at the doors of the department. Their total demands added together would soon have reduced the government to bankruptcy. They seemed to have no kind of interest in economy or self-help. I persuaded the government to fix their grants on definite principles and give them a system of local taxation. The change which occurred when they recognized that this was final was remarkable. Instead of holding out their hands to the government in every little difficulty they turned to and set matters right for themselves. But what was even more striking was the improvement which took place in their relations with government. The moment their resources were defined

¹ p. 90, column 1.

they ceased to spend their breath on execrating government, and mutual relations became as amicable as they ever are between a government and local authorities.

§ 42. I entirely agree with Sir Stanley Reed and Sir Frank Sly that the executive council and ministers must be each responsible for raising additional revenues required for their own schemes, and that each must have powers of taxation of its own.¹ I also agree with Sir James Meston's view² that the effect of the joint purse will be 'that into the hands of the popular half of the government there is placed, through their handling of the purse-strings, a very large measure of control over the policy in regard to subjects which are not under their administrative control, and consequently for which they are not responsible. Now that seems to me the bare, naked issue which has to be settled'. The justice of this remark will be seen by reference to Mrs. Besant's words:³ 'The budget should be presented as a whole to the legislature, whose resolutions, as said, should be binding'. This is but another illustration of my general criticism of the Joint Report that the principles of the Congress-League scheme, that of giving to popular legislatures control without responsibility, is reintroduced by a number of side tracks into the handling of reserved powers, despite the unqualified condemnation it received in the earlier chapters of the Report.

§ 43. I hope the Committee will at any rate insist on the proposal mooted by Lord Sinha,⁴ by Mr. Montagu,⁵ and supported by Sir William Meyer,⁶ and by Mr. Feetham,⁷ 'to provide machinery whereby a separate purse could be adopted in any province on the initiative of the governor'. I have no doubt whatever what the result will be. I would strongly urge that that machinery should consist of a commission appointed by the Secretary of State such as that over which Lord Southborough presided. Behind this recommendation is a question of policy. You do not, in my opinion, help the Indian civil service in their difficult work by imposing on them the task of shaping the final decisions which have to be taken by the Secretary of State or Parliament on constitutional questions. I feel that on the whole question of reform it would be better for the Cabinet to look to the Viceroy as their adviser, not the Governor-General-in-Council, leaving him to place before

The first of these is the fact that the human body is not a static entity, but one that is constantly changing. This is evident in the way that the body's shape and size change over time, and in the way that the body's internal organs and systems change as well. The second is the fact that the human body is not a simple machine, but one that is capable of complex thought and feeling. This is evident in the way that the body's brain and nervous system are able to process information and make decisions, and in the way that the body's emotions and feelings are able to influence its actions. The third is the fact that the human body is not a isolated entity, but one that is constantly interacting with its environment. This is evident in the way that the body's senses are able to detect and respond to external stimuli, and in the way that the body's internal organs and systems are able to regulate its internal environment.

The study of the human body is a complex and fascinating task, and one that has been the subject of many different approaches. The most common approach is the scientific approach, which seeks to understand the human body in terms of its physical and chemical properties. This approach has led to many important discoveries, such as the discovery of the structure of the DNA molecule and the discovery of the human genome. However, there are also other approaches to the study of the human body, such as the philosophical approach and the psychological approach. The philosophical approach seeks to understand the human body in terms of its relationship to the mind and the soul, and the psychological approach seeks to understand the human body in terms of its relationship to the mind and the emotions.

One of the most important things to remember about the human body is that it is a complex and fascinating entity, and one that is constantly changing and interacting with its environment. It is a body that is capable of complex thought and feeling, and one that is constantly evolving and adapting to its surroundings. The study of the human body is a task that is both challenging and rewarding, and one that has the potential to lead to many important discoveries.

them the views of his council together with those of provincial governments. In the pronouncement of August 20, 1917, this was done. Had a final responsibility for reporting on reform from 1908 onwards been concentrated on the Viceroy personally, as it was on Lord Durham, I do not believe matters would ever have got into the tangle which needed a visit by the Secretary of State to India to unravel them.

§ 44. The same principle applies to the shaping of constitutional settlements for ratification by the Secretary of State. The Committee will see my meaning if they will consider how little suspicion has been provoked or friction raised by the Southborough Committees. Contrast this with what would have happened if Parliament had left the local governments to shape franchises and lists of transferred subjects for their final approval. The state of suspicion and unreason aroused thereby would have aggravated the difficulties which the local governments have to face, and have prejudiced the prospect of the reforms. The distinction I am trying to draw between the functions of the governments in India and that of the home authorities is closely analogous to that between the officers of the Navy and the naval architects. The officers ought to be consulted on every detail of the ships they will have to work. They ought not to be asked to draw the actual plans upon which the Sea Lords will have to decide. That is why I think it so important that periodic settlements of revenue when asked for by governors should be examined by committees like those of Lord Southborough, before ratification by the Secretary of State. The executive council and ministers can both state their case to such committees, and when the settlement is made I do not hesitate to predict a marked improvement in their mutual relations.

§ 45. My own view is that no real education in responsible government will begin until definite resources as well as definite functions are transferred. I therefore recommend the Committee to provide for a commission to complete the work of the Feetham Committee after the first two or three years' experience has been gained. But the governor's position will be rendered impossible unless he can obtain such a commission on requisition.¹

11. Do you accept the position adopted in the Bill (Part ii) that the time has not yet come to give the legislative assembly

a similar measure of control over the central government as that given to provincial legislative councils over provincial governments? 12. Do you agree that it is advisable none the less to provide for a substantial elective majority in the Indian Legislature? (Clause 16.) 13. Do you accept the plan of a bicameral legislature as arising out of this, as constituting both a satisfactory machine for the ordinary purposes of legislation and as affording the means to the Governor-General-in-Council to secure legislation which he regards as essential? (Clauses 14, 15, and 16.) 14. Do you accept the provisions of the Bill as to the course of legislation in the Indian legislature? (Clause 20 (3) and (4).) Or do you regard them as unnecessarily restrictive on the popular will, or as inadequate means of ensuring to the Governor-General-in-Council the discharge of his responsibilities?

§ 1. I think the working of dyarchy should be thoroughly tested in the provincial governments before any attempt is made to apply it to the Government of India. I approve therefore of this feature in the Bill, that all the functions of the Government of India are to remain for the present of the nature of 'reserved subjects' upon which the government has unquestionable power to pass the necessary legislation and obtain the necessary votes in supply. But before exercising these powers it should be exposed to the influence of representatives of all sections of Indians affected, and be able to listen to their views publicly expressed. British India contains upwards of 200,000,000 inhabitants, divided up into a large variety of sections, many of which can find no spokesmen in an assembly limited to about 94 Indian members at most.

§ 2. All the objections urged against the use of the official *bloc* to force legislation through the legislative councils apply to the council of state, and one of them with greater force. If elected members in the assembly are to be overruled by government, let its orders be issued openly and operate directly. I cannot conceive a more exasperating way of overruling the assembly than to do it by a secret whip issued to officials in another body. Continuous reliance on this mischievous expedient is a fatal hindrance to the enlargement of the Indian legislature to a size needed to make it an effective organ of Indian opinion. By keeping down the number of members the difficulties of direct election are enhanced. Until the main body of the Indian legislature is directly elected it is impossible to contemplate the transfer of any subjects to its control. Apart from its

§ 1. I think the working of dyarchy should be thoroughly tested in the provincial governments before any attempt is made to apply it to the Government of India. I approve therefore of this feature in the Bill, that all the functions of the Government of India are to remain for the present of the nature of 'reserved subjects' upon which the government has unquestionable power to pass the necessary legislation and obtain the necessary votes in supply. But before exercising these powers it should be exposed to the influence of representatives of all sections of Indians affected, and be able to listen to their views publicly expressed. British India contains upwards of 200,000,000 inhabitants, divided up into a large variety of sections, many of which can find no spokesmen in an assembly limited to about 94 Indian members at most.

§ 2. All the objections urged against the use of the official *bloc* to force legislation through the legislative councils apply to the council of state, and one of them with greater force. If elected members in the assembly are to be overruled by government, let its orders be issued openly and operate directly. I cannot conceive a more exasperating way of overruling the assembly than to do it by a secret whip issued to officials in another body. Continuous reliance on this mischievous expedient is a fatal hindrance to the enlargement of the Indian legislature to a size needed to make it an effective organ of Indian opinion. By keeping down the number of members the difficulties of direct election are enhanced. Until the main body of the Indian legislature is directly elected it is impossible to contemplate the transfer of any subjects to its control. Apart from its

serious complications the Council of State involves using up a number of legislators whose seats added to the other body would provide more room for elected members. To continue indirect election is to foster the growth of corruption both in the Indian and provincial assemblies. There is far more temptation to corrupt twelve electors than 12,000.

§ 3. Another serious objection to indirect election by the provincial assemblies is that as they always tend to elect from their own members, an election to the Indian assembly precipitates a crop of by-elections all over India. This did not matter under the old system. It may matter a great deal when ministers' tenure of office depends on a balance of parties.

§ 4. These complicated proposals suffer from the same defect as the Minto-Morley reforms, because they are based on the same principle. They are utterly inelastic. There is in them no capacity for development in the direction of responsible government. The moment you adopt the simple straightforward method of legislation whereby motions which the Viceroy cannot accept are rendered inoperative by his simple refusal, all these difficulties either vanish or are greatly diminished. The numbers can be fixed solely with an eye to enabling government to hear the views of all representative sections in India. The constituencies can be proportionately reduced in size. In this context, however, I wish to say that it seems to me that far too much importance is attached to constituencies small enough to enable candidates to come into personal contact with the electors. That is scarcely a good argument for giving voters no representation at all, for half a loaf is better than no bread. And is it altogether a disadvantage that electors should have to judge less by the ingratiating manners of the candidates than by the issues they represent? Direct elections cannot be more unreal than these hole-and-corner elections of handfuls of legislators. The ungenuine character of these elections and their tendency to corruption have not, I feel, been weighed as against the difficulties of real representation. I see no insuperable obstacle in grouping the constituencies delimited for the provincial councils and taking as the franchise electors on the roll above the age of 30.

§ 5. Judging from the evidence the council of state has few real friends. Even the merit of popularity cannot be claimed for it. As an organ to register the government's

1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 26

1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 26

Abstract

[illegible]

1000

1. The first step is to identify the problem or question that needs to be addressed. This involves understanding the context and the specific requirements of the task.

2. Next, it is important to gather relevant information and data. This can be done through research, consultation with experts, or by analyzing existing data sets.

3. Once the information is gathered, the next step is to develop a plan or strategy to solve the problem. This often involves breaking down the problem into smaller, more manageable parts.

4. The fourth step is to implement the plan. This may involve conducting experiments, running simulations, or applying the strategy to real-world data.

5. Finally, the results of the implementation should be evaluated. This involves comparing the outcomes against the original goals and objectives to determine the effectiveness of the solution.

serious complications the Council of State involves using up a number of legislators whose seats added to the other body would provide more room for elected members. To continue indirect election is to foster the growth of corruption both in the Indian and provincial assemblies. There is far more temptation to corrupt twelve electors than 12,000.

§ 3. Another serious objection to indirect election by the provincial assemblies is that as they always tend to elect from their own members, an election to the Indian assembly precipitates a crop of by-elections all over India. This did not matter under the old system. It may matter a great deal when ministers' tenure of office depends on a balance of parties.

§ 4. These complicated proposals suffer from the same defect as the Minto-Morley reforms, because they are based on the same principle. They are utterly inelastic. There is in them no capacity for development in the direction of responsible government. The moment you adopt the simple straightforward method of legislation whereby motions which the Viceroy cannot accept are rendered inoperative by his simple refusal, all these difficulties either vanish or are greatly diminished. The numbers can be fixed solely with an eye to enabling government to hear the views of all representative sections in India. The constituencies can be proportionately reduced in size. In this context, however, I wish to say that it seems to me that far too much importance is attached to constituencies small enough to enable candidates to come into personal contact with the electors. That is scarcely a good argument for giving voters no representation at all, for half a loaf is better than no bread. And is it altogether a disadvantage that electors should have to judge less by the ingratiating manners of the candidates than by the issues they represent? Direct elections cannot be more unreal than these hole-and-corner elections of handfuls of legislators. The unguine character of these elections and their tendency to corruption have not, I feel, been weighed as against the difficulties of real representation. I see no insuperable obstacle in grouping the constituencies delimited for the provincial councils and taking as the franchise electors on the roll above the age of 30.

§ 5. Judging from the evidence the council of state has few real friends. Even the merit of popularity cannot be claimed for it. As an organ to register the government's

will I have already discussed it. As a revising chamber, Mrs. Besant was against it, on the ground that what India needs is quickening rather than retarding influences.¹ The fate which has met the efforts of Indian social reformers in the Viceroy's Legislative Council fully justifies that remark. I see no case for introducing this highly artificial arrangement at a stage in reform when simplicity is itself a ruling consideration—the simplicity which alone will enable simple minds to see how the machinery is operating.²

15. Do you accept the changes made by the Bill (Clause 21) in the constitution of the Governor-General's Executive Council? If not, what are your reasons, and what modifications would you suggest?

§ 1. In the light of experience thrown by the conduct of this war, in the making of peace, and from all that I saw in India, I am convinced that final and supreme decisions of government should never be left to professional officials. The system under which a Viceroy can be overruled by his officials is a survival of conditions in Company days, now long obsolete. I should like to see the provision changed whereby the Viceroy can be overruled by a majority of his executive council. I think that the final decisions whether to accept or reject motions carried in the assembly should rest with the Viceroy personally. As to the exact number of official advisers he should have under these conditions I have no opinion to offer.

16. Do you think that the development of Provincial autonomy on the one hand, and self-government in the Provinces on the other, involves any modification of the provisions of Section 2, 33, and 45 of the Government of India Act (Clause 23)?

§ 1. This is a technical point upon which my opinion is valueless.

17. Do you agree that the gradual realization of responsible government involves periodical examination of progress, by

¹ p. 73, q. 13.

² See Report of Joint Select Committee, § 7, clause 18.

independent authority, and that the provisions of Clause 28 of the Bill are well designed to afford such examination ?

§ 1. Yes. My reasons are given above, when explaining why I think that the revenues, as well as the functions of the executive council and ministers respectively should be assigned by a committee like the Southborough Committees appointed by the Secretary of State.

§ 2. I earnestly hope that Parliament will permit no further transfer of powers except on its own authority signified in the report of a Commission appointed ten years hence under Clause 28. The attention of India will not be concentrated on administrative work so long as the door is kept open to constitutional agitation. If the success of such agitation depends on the Government of India, the relations of Indians with the government are certain to be embittered. The provision by which electorates and their representatives are given ten years in which to try their hand at responsible government within a limited sphere, and that the results of their work are to be judged by Parliament itself before making any further extension is in accordance with the terms of the pronouncement of August 20. It is eminently calculated in my opinion to accelerate the progress of India towards responsible government.¹

18. Are there any matters which it is proposed in the Bill to deal with by rule which you would suggest should be provided for in the Bill ?

§ 1 I think there are several matters such as those involved in instructions to governors which cannot properly be embodied in the Bill, upon which Parliament should pronounce in the form of resolutions drafted by this Committee. This is especially so where the Committee find reason to differ from the policy outlined in the Joint Report.

19. Have you any observations to offer on the Reports of Lord Southborough's Committees and of the Committee on the Home Administration of Indian Affairs ?

§ 1. I have already recorded my opinion against continuing the system of indirect election for the Indian legislature,

¹ Ibid., § 7, clause 41.

independent authority, and that the provisions of Clause 28 of the Bill are well designed to afford such examination ?

§ 1. Yes. My reasons are given above, when explaining why I think that the revenues, as well as the functions of the executive council and ministers respectively should be assigned by a committee like the Southborough Committees appointed by the Secretary of State.

§ 2. I earnestly hope that Parliament will permit no further transfer of powers except on its own authority signified in the report of a Commission appointed ten years hence under Clause 28. The attention of India will not be concentrated on administrative work so long as the door is kept open to constitutional agitation. If the success of such agitation depends on the Government of India, the relations of Indians with the government are certain to be embittered. The provision by which electorates and their representatives are given ten years in which to try their hand at responsible government within a limited sphere, and that the results of their work are to be judged by Parliament itself before making any further extension is in accordance with the terms of the pronouncement of August 20. It is eminently calculated in my opinion to accelerate the progress of India towards responsible government.¹

18. Are there any matters which it is proposed in the Bill to deal with by rule which you would suggest should be provided for in the Bill ?

§ 1 I think there are several matters such as those involved in instructions to governors which cannot properly be embodied in the Bill, upon which Parliament should pronounce in the form of resolutions drafted by this Committee. This is especially so where the Committee find reason to differ from the policy outlined in the Joint Report.

19. Have you any observations to offer on the Reports of Lord Southborough's Committees and of the Committee on the Home Administration of Indian Affairs ?

§ 1. I have already recorded my opinion against continuing the system of indirect election for the Indian legislature,

¹ Ibid., § 7, clause 41.

and shown that it is not necessary if control of Indian legislation by the Government of India is based on straightforward methods.

§ 2. The reasons of the Functions Committee for the transfer of higher education seem to me conclusive.

§ 3. I agree with the Majority Report of the Committee on the Home Administration of Indian Affairs, that the responsibility now vested in the Secretary of State in Council should be vested in the Secretary of State individually, and that he should have an advisory committee.

§ 4. I cannot understand the objections to recruiting the staff of the India Office in future from the I.C.S. It seems to me an enormous advantage to the Indian civilian to be brought home for say five years, and an equally great advantage for the office to be staffed by men who know India and will return there. I think the change would go far to assist recruitment to the I.C.S. It would also help to neutralize the undoubted effect of a life spent in India to unfit able men for any other spheres of public service when they retire at fifty. It also makes it far easier to introduce to the India Office civil servants who are natives of India.

§ 5. On fiscal matters I think it is of vital importance that Parliament should declare in terms that the Government of India is to frame the fiscal policy of India as it would if India were already a self governing Dominion, and as though it were responsible to an assembly representing all classes of consumers in India. I do not mean that it should be bound by an assembly which cannot as yet fulfil that condition.¹

§ 6. I can see no possible reason why the cost of the India Office should be saddled on the British taxpayer, except on the principle that India is to be governed for the benefit of the British taxpayer. On the same principle I consider that the cost of that part of the Colonial Office which is charged with administering the Crown Colonies should be distributed amongst those colonies. The British Commonwealth is a world State, and the principle of locating on the British taxpayer every charge which any one can find an excuse to evade must stop some time, or the whole system will collapse through bankruptcy at the centre.

SCHEDULE OF RECOMMENDATIONS

A.—SUGGESTIONS IN MR. CURTIS'S STATEMENT,
EFFECT TO WHICH MIGHT BE GIVEN BY
AMENDMENTS TO THE BILL

1. In the preamble, omit all words down to and including the word 'such' in l. 6 and substitute the following words :
'Whereas with a view to increasing the association of Indians in every branch of Indian Administration and the gradual development of self-governing institutions with a view to the progressive realization of responsible government in India as an integral part of the British Empire, it is expedient that substantial steps in this direction should be taken, and whereas progress in this direction can only be achieved by successive stages ;

'And whereas the time and measure of each advance can alone be determined subject to the King's Most Excellent Majesty, by and with the advice and consent of the Lords spiritual and temporal and Commons in Parliament assembled, on whom the responsibility lies for the welfare and advancement of the Indian peoples ;

'And whereas such advice and consent must be guided by the co-operation received from those upon whom new opportunities of service will thus be conferred, and by the extent to which it is found that confidence can be reposed in their sense of responsibility ;

'And whereas concurrently with the gradual development of self-governing, &c.'¹

2. That the Bill be amended in such manner as to admit of the constitution of two sub-provinces in Assam.

3. That approval be signified to the principle of reserving permanently to Imperial control a tract separating the northern frontiers of British India from foreign and native States by inserting the words 'or frontier' between the words 'backward' and 'tract' in Section 12 (2), l. 12.

4. That approval be signified to the principle that salaries of Ministers should be fixed by the Legislative Council² by substituting the words 'Legislative Council' for the word 'Governor' in Clause 3 (1), l. 36.

5. That with a view to helping electorates to recognize the difference between reserved and transferred subjects

SCHEDULE OF RECOMMENDATIONS

A.—SUGGESTIONS IN MR. CURTIS'S STATEMENT,
EFFECT TO WHICH MIGHT BE GIVEN BY
AMENDMENTS TO THE BILL

1. In the preamble, omit all words down to and including the word 'such' in l. 6 and substitute the following words :
' Whereas with a view to increasing the association of Indians in every branch of Indian Administration and the gradual development of self-governing institutions with a view to the progressive realization of responsible government in India as an integral part of the British Empire, it is expedient that substantial steps in this direction should be taken, and whereas progress in this direction can only be achieved by successive stages ;

' And whereas the time and measure of each advance can alone be determined subject to the King's Most Excellent Majesty, by and with the advice and consent of the Lords spiritual and temporal and Commons in Parliament assembled, on whom the responsibility lies for the welfare and advancement of the Indian peoples ;

' And whereas such advice and consent must be guided by the co-operation received from those upon whom new opportunities of service will thus be conferred, and by the extent to which it is found that confidence can be reposed in their sense of responsibility ;

' And whereas concurrently with the gradual development of self-governing, &c.'¹

2. That the Bill be amended in such manner as to admit of the constitution of two sub-provinces in Assam.

3. That approval be signified to the principle of reserving permanently to Imperial control a tract separating the northern frontiers of British India from foreign and native States by inserting the words 'or frontier' between the words 'backward' and 'tract' in Section 12 (2), l. 12.

4. That approval be signified to the principle that salaries of Ministers should be fixed by the Legislative Council² by substituting the words 'Legislative Council' for the word 'Governor' in Clause 3 (1), l. 36.

5. That with a view to helping electorates to recognize the difference between reserved and transferred subjects

¹ Ibid., § 7, Preamble.

² Ibid., § 7, clause 4.

and to know where responsibility of executive and legislative acts lies¹ the Bill be amended in such manner—

I. (a) That acts done by the Executive Council may be expressed as acts done by 'the Governor in Council'.

(b) That acts done by the Ministers may be expressed as acts done by 'the Governor on the advice of his ministers'.

II. (a) That measures passed under reserved subjects begin with the words 'Be it enacted by the Governor'.

(b) That measures passed under transferred subjects begin with the words 'Be it enacted by the Governor by and with the advice of the Provincial Assembly'.

III. That the Legislature when dealing with the reserved subjects be styled 'the Legislative Council', and when dealing with transferred subjects 'the Provincial Assembly'.

IV. That the Provincial Assembly be empowered to elect its own Speaker and frame its own Standing Orders subject to the Governor's approval.²

V. That with a view to recognizing the corporate responsibility of Ministers³ the words 'the Minister in charge' in Clause 3 (3), l. 42, be changed to 'his Ministers', and in l. 2, p. 4, the words 'the Minister' to 'Ministers'.

VI. That with a view to providing that in transferred subjects a Governor shall not depart from the advice of his Ministers, unless he is prepared to contemplate the resumption of transferred subjects to the category of reserved subjects, the words 'owing to a vacancy there is no Minister in charge of the subject' be omitted from Clause 3 (4), ll. 7 and 8.⁴

6. That the principle be recognized that as the Governor is finally responsible to the Secretary of State for all reserved subjects, his power of determining what legislation is necessary for the discharge of those functions must also be final, subject only to the Secretary of State, and that to give effect thereto the Bill be so amended as to provide that motions of any kind passed in the Legislative Council shall not take effect if the Governor announces that he cannot accept them;⁵ and, consequential thereto, that officials may sit but not vote on the Legislative Council.

7. That provision be made in the Bill that after two years a Commission shall be appointed to separate the revenues and powers of taxation to be allocated to the Executive Council and Ministers for their respective functions, such

settlement to be revised periodically by the Commissions appointed under Clause 28, or alternately.

That the Governor be empowered to demand the appointment of such a Commission after two years.¹

8. (a) That in all India legislation the Governor-General be given the same powers as those recommended in (6) for the Governors.²

(b) That the Council of State be not created.³

(c) That a number of elected members at least equal to the Council of State and the official members in the present proposals be added to the Legislative Assembly.

(d) That the Secretary of State be empowered to make regulations to give effect to these changes, and for the direct elections of all elected members.⁴

9. That section 41 of the Government of India Act, 1915-16, be amended in such manner as to provide that the Governor-General is not bound by the opinion or decision of a majority of his Council in any matter whatsoever; subject, however, to the existing provision of subsection (3) that any two members may require that their dissent from the Governor-General's decision may be reported to the Secretary of State, together with copies of any minutes which the members of Council have recorded on the subject.

10. That no change be made in the allocation of the charges for the Secretary of State for India and his office, but that the Indian Budget be discussed at an earlier stage of the session than is now the practice.

B. SUGGESTIONS IN MR. CURTIS'S STATEMENT, EFFECT TO WHICH MIGHT BE GIVEN BY RESOLUTIONS OF PARLIAMENT

1. That any clear request by a majority of members of a Provincial Legislature representing a distinctive racial and linguistic territorial unit for its constitution under Clause 12 of the Bill as a sub-province may be taken as a *prima facie* case, on the strength of which the Secretary of State may appoint a Commission of Inquiry.⁵

2. That whenever a Governor has exercised his power to resume direct control of transferred subjects a Commission

¹ Ibid., § 7, clause 1.

² Ibid., § 7, clause 18.

³ Ibid., § 7, clause 15.

⁴ Ibid., § 7, clause 26.

⁵ Ibid., § 7, clause 19.

1. The first part of the document is a letter from the President of the United States to the Congress, dated January 3, 1801. It is a very important document, as it contains the President's first message to the Congress. The letter is written in a very formal and dignified style, and it is one of the most important documents in the history of the United States.

2. The second part of the document is a letter from the President to the Congress, dated January 3, 1801. It is a very important document, as it contains the President's first message to the Congress. The letter is written in a very formal and dignified style, and it is one of the most important documents in the history of the United States.

3. The third part of the document is a letter from the President to the Congress, dated January 3, 1801. It is a very important document, as it contains the President's first message to the Congress. The letter is written in a very formal and dignified style, and it is one of the most important documents in the history of the United States.

4. The fourth part of the document is a letter from the President to the Congress, dated January 3, 1801. It is a very important document, as it contains the President's first message to the Congress. The letter is written in a very formal and dignified style, and it is one of the most important documents in the history of the United States.

5. The fifth part of the document is a letter from the President to the Congress, dated January 3, 1801. It is a very important document, as it contains the President's first message to the Congress. The letter is written in a very formal and dignified style, and it is one of the most important documents in the history of the United States.

6. The sixth part of the document is a letter from the President to the Congress, dated January 3, 1801. It is a very important document, as it contains the President's first message to the Congress. The letter is written in a very formal and dignified style, and it is one of the most important documents in the history of the United States.

settlement to be revised periodically by the Commissions appointed under Clause 28, or alternately.

That the Governor be empowered to demand the appointment of such a Commission after two years.¹

8. (a) That in all India legislation the Governor-General be given the same powers as those recommended in (6) for the Governors.²

(b) That the Council of State be not created.³

(c) That a number of elected members at least equal to the Council of State and the official members in the present proposals be added to the Legislative Assembly.

(d) That the Secretary of State be empowered to make regulations to give effect to these changes, and for the direct elections of all elected members.⁴

9. That section 41 of the Government of India Act, 1915-16, be amended in such manner as to provide that the Governor-General is not bound by the opinion or decision of a majority of his Council in any matter whatsoever; subject, however, to the existing provision of sub-section (3) that any two members may require that their dissent from the Governor-General's decision may be reported to the Secretary of State, together with copies of any minutes which the members of Council have recorded on the subject.

10. That no change be made in the allocation of the charges for the Secretary of State for India and his office, but that the Indian Budget be discussed at an earlier stage of the session than is now the practice.

B. SUGGESTIONS IN MR. CURTIS'S STATEMENT, EFFECT TO WHICH MIGHT BE GIVEN BY RESOLUTIONS OF PARLIAMENT

1. APPENDIX A

REPORT

FROM THE JOINT SELECT COMMITTEE OF THE
HOUSE OF LORDS AND THE HOUSE OF COM-
MONS APPOINTED TO CONSIDER THE GOVERN-
MENT OF INDIA BILL

*(Ordered by the House of Commons to be printed
17th November, 1919)*

ORDERED TO REPORT

1. That the Committee have met and considered the said Bill and taken the evidence of a large number of witnesses, many of whom had come all the way from India for the purpose. A mass of telegrams and other communications has also been received. The list of witnesses and the telegrams have been printed as an appendix to the evidence. Written representations have not as a rule been printed. The Committee appreciate the advantage they have derived from being placed in full possession of the views of many persons who have given much thought to the political future of the country.

2. The Committee were not charged, as some have seemed to think, with the task of reporting on the state of India, or on the conduct of the administration in India, or even at large on the best form of government for India, but only with the duty of dealing with this Bill, which had been read a second time in the House of Commons, according to the well-known forms of Parliamentary procedure and with the rules and conventions arising out of it.

3. In the declaration made by His Majesty's Government on the 20th August, 1917, there is enunciated the problem for which the Bill endeavours to provide a solution. It is to design the first stage in a measured progress towards responsible government. Any such stage, if it is to be a real advance, must, as the Committee conceive it, involve the creation of an electorate, and the bestowal of some share in the work and responsibilities of government on those whom the electorate chooses to represent its interests. In the present circumstances of India, the electorate must at the outset be small and the administrative experience of its representatives must be limited. Before, therefore, the policy of His Majesty's Government can be

REPORT

FROM THE JOINT SELECT COMMITTEE OF THE
HOUSE OF LORDS AND THE HOUSE OF COM-
MONS APPOINTED TO CONSIDER THE GOVERN-
MENT OF INDIA BILL

*(Ordered by the House of Commons to be printed
17th November, 1919)*

ORDERED TO REPORT

1. That the Committee have met and considered the said Bill and taken the evidence of a large number of witnesses, many of whom had come all the way from India for the purpose. A mass of telegrams and other communications has also been received. The list of witnesses and the telegrams have been printed as an appendix to the evidence. Written representations have not as a rule been printed. The Committee appreciate the advantage they have derived from being placed in full possession of the views of many persons who have given much thought to the political future of the country.

2. The Committee were not charged, as some have seemed to think, with the task of reporting on the state of India, or on the conduct of the administration in India, or even at large on the best form of government for India, but only with the duty of dealing with this Bill, which had been read a second time in the House of Commons, according to the well-known forms of Parliamentary procedure and with the rules and conventions arising out of it.

3. In the declaration made by His Majesty's Government on the 20th August, 1917, there is enunciated the problem for which the Bill endeavours to provide a solution. It is to design the first stage in a measured progress towards responsible government. Any such stage, if it is to be a real advance, must, as the Committee conceive it, involve the creation of an electorate, and the bestowal of some share in the work and responsibilities of government on those whom the electorate chooses to represent its interests. In the present circumstances of India, the electorate must at the outset be small and the administrative experience of its representatives must be limited. Before, therefore, the policy of His Majesty's Government can be

fulfilled the electorate must grow, and practical experience in the conduct of public affairs must be enlarged. During this period the guardianship of the peace of India cannot be withdrawn from the care of the official agency which Parliament at present charges with the duties of the administration, and the Committee regard it to be an essential feature of the policy of His Majesty's Government that, except in so far as he is released from responsibility by the changes made under this Bill, the Governor General in Council should remain in undisturbed responsibility to Parliament and fully equipped with the necessary powers to fulfil that responsibility. But from the beginning the people must be given an opportunity, and all political wisdom points to its being a generous opportunity, of learning the actual business of government and of showing, by their conduct of it, to some future Parliament that the time has come for further extensions of power.

4. In the opinion of the Committee the plan proposed by the Bill is conceived wholly in this spirit, and interprets the pronouncement of the 20th August, 1917, with scrupulous accuracy. It partitions the domain of provincial government into two fields, one of which is made over to ministers chosen from the elected members of the provincial legislature while the other remains under the administration of a Governor in Council. This scheme has evoked apprehensions which are not unnatural in view of its novelty. But the Committee, after the most careful consideration of all suggested alternatives, are of opinion that it is the best way of giving effect to the spirit of the declared policy of His Majesty's Government. Its critics forget that the announcement spoke of a substantial step in the direction of the gradual development of self governing institutions with a view to the progressive realisation of responsible government and not of the partial introduction of responsible government; and it is this distinction which justifies the method by which the Bill imposes responsibility, both on Ministers to the legislative council and on the members of the legislative council to their constituents, for the results of that part of the administration which is transferred to their charge.

5. Having weighed the evidence and information before them, the Committee have made a number of changes in the Bill. Those of a more detailed or miscellaneous character are briefly discussed below under the clauses to which they relate. Those which are directed to the avoidance of the difficulties and dangers which have been pointed out, proceed on a simple and, in the Committee's opinion, an indefensible theory. That theory the Committee think it desirable to state at once. Ministers who enjoy the confidence of a majority in their legislative council will be given the fullest opportunity of managing that field of government which is entrusted to their care. In their work they will be assisted and guided by the Governor, who will accept their advice and promote their policy whenever possible. If he finds himself compelled to act against

The first part of the paper discusses the importance of the
 Journal of Management Education in the field of management
 education. It then presents a review of the journal's
 content, highlighting the quality and diversity of the
 articles. The second part of the paper discusses the
 journal's impact on the field of management education,
 including its role in advancing research and practice.
 The paper concludes with a discussion of the journal's
 future and its potential to continue to make a
 significant contribution to the field.

...the ...

their advice, it will only be in circumstances roughly analogous to those in which he has to override his executive council—circumstances which will be indicated in the Instrument of Instructions furnished to him on his appointment by His Majesty. On the other hand, in and for that field of government in which Parliament continues to hold him responsible, the provincial Governor-in-Council will remain equipped with the sure and certain power of fulfilling that responsibility. The Committee will indicate in the course of this Report how they visualise the relations between the two parts of the provincial government, but they wish to place in the forefront of the Report their opinion that they see no reason why the relations should not be harmonious and mutually advantageous. They regard it as of the highest importance that the Governor should foster the habit of free consultation between both halves of his government, and indeed that he should insist upon it in all important matters of common interest. He will thus ensure that ministers will contribute their knowledge of the people's wishes and susceptibilities, and the members of his Executive Council their administrative experience to the joint wisdom of the government. But while the Committee anticipate much advantage from amicable and, as far as possible, spontaneous association for purposes of deliberation, they would not allow it to confuse the duties or obscure the separate responsibility which will rest on the two parts of the administration. Each side of the government will advise and assist the other; neither will control or impede the other. The responsibility for administrative and legislative action in their own field will be fixed beyond possibility of doubt on ministers and on the majorities of the provincial legislatures which support them; and they will be given adequate power to fulfil their charge. Similarly within that field for which he remains accountable to Parliament, the responsibility for action must be fixed on the Governor-in-Council, and he must possess unfailing means for the discharge of his duties. Finally, behind the provincial authorities stands the Government of India.

6. The change which this Bill will make in the political structure and life of India is very important. It marks a great step in the path of self-government, and it is a proof of the confidence reposed by His Majesty's Government in the loyalty, wisdom, and capacity of our Indian fellow-subjects. At the same time it points to the desirability of keeping Parliament in closer touch with Indian affairs than has recently been possible. The Committee accordingly propose that a Standing Joint Committee should be appointed by both Houses of Parliament for that purpose. It should have no statutory functions, but a purely advisory and consultative status; and among its tasks is one of high importance, the consideration of amendments to rules made under this Bill. For the plan on which the Bill has been drafted, and in the opinion of the Committee rightly drafted, will necessitate the completion of some of its main provisions by a large number of rules and other documents which will have to be

their advice, it will only be in circumstances roughly analogous to those in which he has to override his executive council—circumstances which will be indicated in the Instrument of Instructions furnished to him on his appointment by His Majesty. On the other hand, in and for that field of government in which Parliament continues to hold him responsible, the provincial Governor-in-Council will remain equipped with the sure and certain power of fulfilling that responsibility. 6. The change which this Bill will make in the political structure and life of India is very important. It marks a great step in the path of self government, and it is a proof of the confidence reposed by His Majesty's Government in the loyalty, wisdom, and capacity of our Indian fellow-subjects. At the same time it points to the desirability of keeping Parliament in closer touch with Indian affairs than has recently been possible. The Committee accordingly propose that a Standing Joint Committee should be appointed by both Houses of Parliament for that purpose. It should have no statutory functions, but a purely advisory and consultative status; and among its tasks is one of high importance, the consideration of amendments to rules made under this Bill. For the plan on which the Bill has been drafted, and in the opinion of the Committee rightly drafted, will necessitate the completion of some of its main provisions by a large number of rules and other documents which will have to be

framed before the machinery established by the Bill can come into working order. Many of these rules and documents will be drafted in India for the approval of the Secretary of State. When they come to England, it may be found convenient that the present Committee be re-appointed to advise Parliament in regard to them.

7. The Committee will now proceed to indicate the nature of the changes they have made in the Bill, and also their suggestions for action to be taken under it, either in the framing of rules or by executive process hereafter.

PREAMBLE.

The Preamble of the Bill, as drafted, was based on the announcement of His Majesty's Government in Parliament of the 20th August, 1917, and it incorporated that part of the announcement which pointed to the progressive realisation of responsible government in British India as an integral part of the Empire, and to the expediency of gradually developing self-governing institutions in India, and it referred to the granting to the Provinces of India of a large measure of independence of the Government of India. It did not, however, deal with those parts of the announcement which spoke of the increasing association of Indians in every branch of the administration, and declared that the progress of this policy could only be achieved by successive stages, and that Parliament, advised by his Majesty's Government and by the Government of India, on whom the responsibility lies for the welfare and advancement of the Indian people, must be the judge of the time and measure of each advance, and be guided by the co-operation received from those upon whom new opportunities of service are conferred and by the extent to which it is found that confidence can be reposed in their sense of responsibility.

The Committee have enlarged the preamble so as to include all parts of the announcement of the 20th August, 1917. Their reason for doing so is that an attempt has been made to distinguish between the parts of this announcement, and to attach a different value to each part according to opinion. It has been said, for instance, that whereas the first part is a binding pledge, the later part is a mere expression of opinion of no importance. But the Committee think that is of the utmost importance, from the very inauguration of these constitutional changes, that Parliament should make it quite plain that the responsibility for the successive stages of the development of self-government in India rests on itself and on itself alone, and that it cannot share this responsibility with, much less delegate it to, the newly-elected legislatures of India.

They also desire to emphasize the wisdom and justice of an increasing association of Indians with every branch of the administration, but they wish to make it perfectly clear that His Majesty's Government must remain free to appoint Europeans to those posts for which they are specially required and qualified.

PREAMBLE.

The Preamble of the Bill, as drafted, was based on the announcement of His Majesty's Government in Parliament of the 20th August, 1917, and it incorporated that part of the announcement which pointed to the progressive realisation of responsible government in British India as an integral part of the Empire, and to the expediency of gradually developing self-governing institutions in India, and it referred to the granting to the Provinces of India of a large measure of independence of the Government of India. It did not, however, deal with those parts of the announcement which spoke of the increasing association of Indians in every branch of the administration, and declared that the progress of this policy could only be achieved by successive stages, and that Parliament, advised by his Majesty's Government and by the Government of India, on whom the responsibility lies for the welfare and advancement of the Indian people, must be the judge of the time and measure of each advance, and be guided by the co-operation received from those upon whom new opportunities of service are conferred and by the extent to which it is found that confidence can be reposed in their sense of responsibility.

The Committee have enlarged the preamble so as to include all parts of the announcement of the 20th August, 1917. Their reason for doing so is that an attempt has been made to distinguish between the parts of this announcement, and to attach a different value to each part according to opinion. It has been said, for instance, that whereas the first part is a binding pledge, the later part is a mere expression of opinion of no importance. But the Committee think that is of the utmost importance, from the very inauguration of these constitutional changes, that Parliament should make it quite plain that the responsibility for the successive stages of the development of self-government in India rests on itself and on itself alone, and that it cannot share this responsibility with, much less delegate it to, the newly-elected legislatures of India.

They also desire to emphasize the wisdom and justice of an increasing association of Indians with every branch of the administration, but they wish to make it perfectly clear that His Majesty's Government must remain free to appoint Europeans to those posts for which they are specially required and qualified.

PART I.

Clause 1. The Committee wish to take this opportunity of acknowledging the debt they owe to the work of the two Committees on Franchise and Functions presided over by Lord Southborough. If they are not able to accept all the conclusions of these Committees, and if they recommend some additional provisions to those included in those reports, it does not mean that they are not very sensible of the value of the work done, without which, indeed, this constitutional change could not have been effected.

The lists of central, provincial, and transferred subjects included in the Functions Committee's report have been somewhat altered after consultation with the India Office (*see Appendix F to the Minutes of Evidence*): and as so amended they are accepted by this Committee, subject to certain general observations at the end of this Report. It must not, however, be concluded that these partitions of the functions of government are absolutely clear-cut and mutually exclusive. They must in all cases be read with the reservations in the text of the Functions Committee's report, and with due regard to the necessity for special procedure in cases where their orbits overlap.

The Committee have given much attention to the difficult question of the principle on which the provincial revenues and balances should be distributed between the two sides of the provincial governments. They are confident that the problem can readily be solved by the simple process of common sense and reasonable give and take, but they are aware that this question might, in certain circumstances, become the cause of much friction in the provincial government, and they are of opinion that the rules governing the allocation of these revenues and balances should be framed so as to make the existence of such friction impossible. They advise that, if the Governor, in the course of preparing either his first or any subsequent budget, finds that there is likely to be a serious or protracted difference of opinion between the executive council and his ministers on this subject, he should be empowered at once to make an allocation of revenue and balances between the reserved and transferred subjects, which should continue for at least the whole life of the existing legislative council. The Committee do not endorse the suggestion that certain sources of revenue should be allocated to reserved, and certain sources to transferred subjects, but they recommend that the Governor should allocate a definite proportion of the revenue, say, by way of illustration, two-thirds to reserved and one-third to transferred subjects, and similarly a proportion, though not necessarily the same fraction, of the balances. If the Governor desires assistance in making the allocation, he should be allowed at his discretion to refer the question to be decided to such authority as the Governor-General shall appoint. Further, the Committee are of opinion that it should be laid down

PART I.

Clause 1. The Committee wish to take this opportunity of acknowledging the debt they owe to the work of the two Committees on Franchise and Functions presided over by Lord Southborough. If they are not able to accept all the conclusions of these Committees, and if they recommend some additional provisions to those included in those reports, it does not mean that they are not very sensible of the value of the work done, without which, indeed, this constitutional change could not have been effected.

The lists of central, provincial, and transferred subjects included in the Functions Committee's report have been somewhat altered after consultation with the India Office (*see Appendix F to the Minutes of Evidence*); and as so amended they are accepted by this Committee, subject to certain general observations at the end of this Report. It must not, however, be concluded that these partitions of the functions of government are absolutely clear-cut and mutually exclusive. They must in all cases be read with the reservations in the text of the Functions Committee's report, and with due regard to the necessity for special procedure in cases where their orbits overlap.

The Committee have given much attention to the difficult question of the principle on which the provincial revenues and balances should be distributed between the two sides of the provincial governments. They are confident that the problem can readily be solved by the simple process of common sense and reasonable give and take, but they are aware that this question might, in certain circumstances, become the cause of much friction in the provincial government, and they are of opinion that the rules governing the allocation of these revenues and balances should be framed so as to make the existence of such friction impossible. They advise that, if the Governor, in the course of preparing either his first or any subsequent budget, finds that there is likely to be a serious or protracted difference of opinion between the executive council and his ministers on this subject, he should be empowered at once to make an allocation of revenue and balances between the reserved and transferred subjects, which should continue for at least the whole life of the existing legislative council. The Committee do not endorse the suggestion that certain sources of revenue should be allocated to reserved, and certain sources to transferred subjects, but they recommend that the Governor should allocate a definite proportion of the revenue, say, by way of illustration, two-thirds to reserved and one-third to transferred subjects, and similarly a proportion, though not necessarily the same fraction, of the balances. If the Governor desires assistance in making the allocation, he should be allowed at his discretion to refer the question to be decided to such authority as the Governor-General shall appoint. Further, the Committee are of opinion that it should be laid down

from the first that, until an agreement which both sides of the Government will equally support has been reached, or until an allocation has been made by the Governor, the total provisions of the different expenditure heads in the budget of the province for the preceding financial year shall hold good.

The Committee desire that the relation of the two sides of the Government in this matter, as in all others, should be of such mutual sympathy that each will be able to assist and influence for the common good the work of the other, but not to exercise control over it. The budget should not be capable of being used as a means for enabling ministers or a majority of the legislative council to direct the policy of reserved subjects ; but on the other hand the executive council should be helpful to ministers in their desire to develop the departments entrusted to their care. On the Governor personally will devolve the task of holding the balance between the legitimate needs of both sets of his advisers.

Clause 2.—This clause has been inserted to regularise the raising of loans by local governments on the special security of their own provincial revenues.

Clause 3.—The question has been raised as to the communications between the Governors of provinces and the Secretary of State. The question as to whether such communications shall in future take place, and as to the procedure to be adopted in them, may well be left to the Secretary of State. In the opinion of the Committee there is no cause at present for disturbing the existing position, except to the extent to which the Secretary of State relaxes his powers of direction and control over local governments. To that extent the Government of India will also withdraw from intervention ; but India is not yet ripe for a true federal system, and the central government cannot be relegated to functions of mere inspection and advice. The Committee trust that there will be an extensive delegation, statutory and otherwise, to provincial governments of some powers and duties now in the hands of the Government of India ; and they trust also that the control of that Government over provincial matters will be exercised with a view to preparing the provinces for the gradual transfer of power to the provincial government and legislature.

Clause 4.—The Committee are of opinion that the ministers selected by the Governor to advise him on the transferred subjects should be elected members of the legislative council, enjoying its confidence and capable of leading it. A minister will have the option of resigning if his advice is not accepted by the Governor ; and the Governor will have the ordinary constitutional right of dismissing a minister whose policy he believes to be either seriously at fault or out of accord with the views of the legislative council. In the last resort the Governor can always dissolve his legislative council and choose new ministers after a fresh election ; but if this course is adopted the Committee hope that the Governor will find himself able to

...the ...

accept such views as his new ministers may press upon him regarding the issue which forced the dissolution. The Committee are of opinion that in no province will there be need for less than two ministers, while in some provinces more will be required. In these circumstances they think that it should be recognised from the commencement that ministers may be expected to act in concert together. They probably would do so; and in the opinion of the Committee it is better that they should, and therefore that the fact should be recognised on the face of the Bill. They advise that the status of ministers should be similar to that of the members of the executive council, but that their salaries should be fixed by the legislative council. Later on in this Report it will be suggested that Indian members of the Council of India in London should be paid a higher scale of remuneration than those members of the Council domiciled in the United Kingdom. The same principle might suggest to the legislative council that it was reasonable for the ministers of the provincial government domiciled in India to be paid on a lower scale of remuneration than the European members.

Provision has been made in this clause for the appointment, at the Governor's discretion, of non-official members of the legislative council to fill a role somewhat similar to that of the Parliamentary Under Secretary in this country.

Clause 5. The Committee are of opinion that the normal strength of an executive council, especially in the smaller provinces, need not exceed two members. They have not, however, reduced the existing statutory maximum of four; but if in any case the council includes two members with service qualifications, neither of whom is by birth an Indian, they think that it should also include two unofficial Indian members.

Clause 6. The Committee desire at this point to give a picture of the manner in which they think that, under this Bill, the government of a province should be worked. There will be many matters of administrative business, as in all countries, which can be disposed of departmentally; but there will remain a large category of business, of the character which would naturally be the subject of Cabinet consultation. In regard to this category the Committee conceive that the habit should be carefully fostered of joint deliberation between the members of the executive council and the ministers, sitting under the chairmanship of the Governor. There cannot be too much mutual advice and consultation on such subjects; but the Committee attach the highest importance to the principle that, when once opinions have been freely exchanged and the last word has been said, there ought then to be no doubt whatever as to where the responsibility for the decision lies. Therefore, in the opinion of the Committee, after such consultation, and when it is clear that the decision lies within the jurisdiction of one or other half of the Government, that decision in respect of a reserved subject should be recorded separately by the executive council, and in respect of

1. The first of these is the fact that the majority of the specimens are from the same locality, and are therefore of the same race.
2. The second is the fact that the majority of the specimens are from the same period, and are therefore of the same age.
3. The third is the fact that the majority of the specimens are from the same sex, and are therefore of the same sex.
4. The fourth is the fact that the majority of the specimens are from the same class, and are therefore of the same class.
5. The fifth is the fact that the majority of the specimens are from the same country, and are therefore of the same country.
6. The sixth is the fact that the majority of the specimens are from the same continent, and are therefore of the same continent.
7. The seventh is the fact that the majority of the specimens are from the same world, and are therefore of the same world.
8. The eighth is the fact that the majority of the specimens are from the same universe, and are therefore of the same universe.
9. The ninth is the fact that the majority of the specimens are from the same existence, and are therefore of the same existence.
10. The tenth is the fact that the majority of the specimens are from the same life, and are therefore of the same life.
11. The eleventh is the fact that the majority of the specimens are from the same death, and are therefore of the same death.
12. The twelfth is the fact that the majority of the specimens are from the same resurrection, and are therefore of the same resurrection.
13. The thirteenth is the fact that the majority of the specimens are from the same judgment, and are therefore of the same judgment.
14. The fourteenth is the fact that the majority of the specimens are from the same kingdom, and are therefore of the same kingdom.
15. The fifteenth is the fact that the majority of the specimens are from the same power, and are therefore of the same power.
16. The sixteenth is the fact that the majority of the specimens are from the same glory, and are therefore of the same glory.
17. The seventeenth is the fact that the majority of the specimens are from the same honor, and are therefore of the same honor.
18. The eighteenth is the fact that the majority of the specimens are from the same praise, and are therefore of the same praise.
19. The nineteenth is the fact that the majority of the specimens are from the same fame, and are therefore of the same fame.
20. The twentieth is the fact that the majority of the specimens are from the same reputation, and are therefore of the same reputation.
21. The twenty-first is the fact that the majority of the specimens are from the same respect, and are therefore of the same respect.
22. The twenty-second is the fact that the majority of the specimens are from the same esteem, and are therefore of the same esteem.
23. The twenty-third is the fact that the majority of the specimens are from the same admiration, and are therefore of the same admiration.
24. The twenty-fourth is the fact that the majority of the specimens are from the same awe, and are therefore of the same awe.
25. The twenty-fifth is the fact that the majority of the specimens are from the same reverence, and are therefore of the same reverence.
26. The twenty-sixth is the fact that the majority of the specimens are from the same veneration, and are therefore of the same veneration.
27. The twenty-seventh is the fact that the majority of the specimens are from the same honor, and are therefore of the same honor.
28. The twenty-eighth is the fact that the majority of the specimens are from the same glory, and are therefore of the same glory.
29. The twenty-ninth is the fact that the majority of the specimens are from the same power, and are therefore of the same power.

32. The thirty-second is the fact that the majority of the specimens are from the same resurrection, and are therefore of the same resurrection.
33. The thirty-third is the fact that the majority of the specimens are from the same life, and are therefore of the same life.
34. The thirty-fourth is the fact that the majority of the specimens are from the same death, and are therefore of the same death.
35. The thirty-fifth is the fact that the majority of the specimens are from the same existence, and are therefore of the same existence.
36. The thirty-sixth is the fact that the majority of the specimens are from the same universe, and are therefore of the same universe.
37. The thirty-seventh is the fact that the majority of the specimens are from the same world, and are therefore of the same world.
38. The thirty-eighth is the fact that the majority of the specimens are from the same country, and are therefore of the same country.
39. The thirty-ninth is the fact that the majority of the specimens are from the same continent, and are therefore of the same continent.
40. The fortieth is the fact that the majority of the specimens are from the same class, and are therefore of the same class.
41. The forty-first is the fact that the majority of the specimens are from the same sex, and are therefore of the same sex.
42. The forty-second is the fact that the majority of the specimens are from the same age, and are therefore of the same age.
43. The forty-third is the fact that the majority of the specimens are from the same locality, and are therefore of the same locality.
44. The forty-fourth is the fact that the majority of the specimens are from the same race, and are therefore of the same race.
45. The forty-fifth is the fact that the majority of the specimens are from the same period, and are therefore of the same period.
46. The forty-sixth is the fact that the majority of the specimens are from the same sex, and are therefore of the same sex.
47. The forty-seventh is the fact that the majority of the specimens are from the same class, and are therefore of the same class.
48. The forty-eighth is the fact that the majority of the specimens are from the same country, and are therefore of the same country.
49. The forty-ninth is the fact that the majority of the specimens are from the same continent, and are therefore of the same continent.
50. The fiftieth is the fact that the majority of the specimens are from the same world, and are therefore of the same world.

accept such views as his new ministers may press upon him regarding the move which forced the dissolution. The Committee are of opinion that in no province will there be need for less than two ministers, while in some provinces more will be required. In these circumstances they think that it should be recognised from the commencement that ministers may be expected to act in concert together. They probably would do so; and in the opinion of the Committee it is better that they should, and therefore that the fact should be recognised on the face of the Bill. They advise that the status of ministers should be similar to that of the members of the executive council, but that their salaries should be fixed by the legislative council. Later on in this Report it will be suggested that Indian members of the Council of India in London should be paid a higher scale of remuneration than those members of the Council domiciled in the United Kingdom. The same principle might suggest to the legislative council that it was reasonable for the ministers of the provincial government domiciled in India to be paid on a lower scale of remuneration than the European members.

Provision has been made in this clause for the appointment, at the Governor's discretion, of non-official members of the legislative council to fill a role somewhat similar to that of the Parliamentary Under Secretary in this country.

Clause 5. The Committee are of opinion that the normal strength of an executive council, especially in the smaller provinces, need not exceed two members. They have not, however, reduced the existing statutory maximum of four; but if in any case the council includes two members with service qualifications, neither of whom is by birth an Indian, they think that it should also include two unofficial Indian members.

Clause 6. The Committee desire at this point to give a picture of the manner in which they think that, under this Bill, the government of a province should be worked. There will be many matters of administrative business, as in all countries, which can be disposed of departmentally; but there will remain a large category of business, of the character which would naturally be the subject of Cabinet consultation. In regard to this category the Committee conceive that the habit should be carefully fostered of joint deliberation between the members of the executive council and the ministers, sitting under the chairmanship of the Governor. There cannot be too much mutual advice and consultation on such subjects; but the Committee attach the highest importance to the principle that, when once opinions have been freely exchanged and the last word has been said, there ought then to be no doubt whatever as to where the responsibility for the decision lies. Therefore, in the opinion of the Committee, after such consultation, and when it is clear that the decision lies within the jurisdiction of one or other half of the Government, that decision in respect of a reserved subject should be recorded separately by the executive council, and in respect of

a transferred subject by the ministers, and all acts and proceedings of the government should state in definite terms on whom the responsibility for the decision rests. It will not always, however, be clear, otherwise than in a purely departmental and technical fashion, with whom the jurisdiction lies in the case of questions of common interest. In such cases it will be inevitable for the Governor to occupy the position of informal arbitrator between the two parts of his administration ; and it will equally be his duty to see that a decision arrived at on one side of his government is followed by such consequential action on the other side as may be necessary to make the policy effective and homogeneous.

The position of the Governor will thus be one of great responsibility and difficulty, and also of great opportunity and honour. He may have to hold the balance between divergent policies and different ideals, and to prevent discord and friction. It will also be for him to help with sympathy and courage the popular side of his government in their new responsibilities. He should never hesitate to point out to ministers what he thinks is the right course or to warn them if he thinks they are taking the wrong course. But if, after hearing all the arguments, ministers should decide not to adopt his advice, then, in the opinion of the Committee, the Governor should ordinarily allow ministers to have their way, fixing the responsibility upon them, even if it may subsequently be necessary for him to veto any particular piece of legislation. It is not possible but that in India, as in all other countries, mistakes will be made by ministers, acting with the approval of a majority of the legislative council, but there is no way of learning except through experience and by the realisation of responsibility.

In the debates of the legislative council members of the executive council should act together and ministers should act together, but members of the executive council and ministers should not oppose each other by speech or vote ; members of the executive council should not be required to support either by speech or vote proposals of ministers of which they do not approve, nor should ministers be required to support by speech or vote proposals of the executive council of which they do not approve ; they should be free to speak and vote for each other's proposals when they are in agreement with them. All other official members of the legislative council should be free to speak and vote as they choose.

Clause 7.—The Committee have altered the first schedule to the Bill, so as to show only the total strength of the legislative council in each province. They have retained the provision, now in sub-clause (2), that at least 70 per cent. of the members shall be elected, and not more than 20 per cent. shall be officials. This general stipulation will govern the distribution of the seats in each province ; but in certain respects the detailed arrangements will require further consideration, and proposals should be called for from the Government of India in regard to them. The points in question, as

a transferred subject by the ministers, and all acts and proceedings of the government should state in definite terms on whom the responsibility for the decision rests. It will not always, however, be clear, otherwise than in a purely departmental and technical fashion, with whom the jurisdiction lies in the case of questions of common interest. In such cases it will be inevitable for the Governor to occupy the position of informal arbitrator between the two parts of his administration ; and it will equally be his duty to see that a decision arrived at on one side of his government is followed by such consequential action on the other side as may be necessary to make the policy effective and homogeneous.

The position of the Governor will thus be one of great responsibility and difficulty, and also of great opportunity and honour. He may have to hold the balance between divergent policies and different ideals, and to prevent discord and friction. It will also be for him to help with sympathy and courage the popular side of his government in their new responsibilities. He should never hesitate to point out to ministers what he thinks is the right course or to warn them if he thinks they are taking the wrong course. But if, after hearing all the arguments, ministers should decide not to adopt his advice, then, in the opinion of the Committee, the Governor should ordinarily allow ministers to have their way, fixing the responsibility upon them, even if it may subsequently be necessary for him to veto any particular piece of legislation. It is not possible but that in India, as in all other countries, mistakes will be made by ministers, acting with the approval of a majority of the legislative council, but there is no way of learning except through experience and by the realisation of responsibility.

In the debates of the legislative council members of the executive council should act together and ministers should act together, but members of the executive council and ministers should not oppose each other by speech or vote ; members of the executive council should not be required to support either by speech or vote proposals of ministers of which they do not approve, nor should ministers be required to support by speech or vote proposals of the executive council of which they do not approve ; they should be free to speak and vote for each other's proposals when they are in agreement with them. All other official members of the legislative council should be free to speak and vote as they choose.

Clause 7.—The Committee have altered the first schedule to the Bill, so as to show only the total strength of the legislative council in each province. They have retained the provision, now in sub-clause (2), that at least 70 per cent. of the members shall be elected, and not more than 20 per cent. shall be officials. This general stipulation will govern the distribution of the seats in each province ; but in certain respects the detailed arrangements will require further consideration, and proposals should be called for from the Government of India in regard to them. The points in question, as

well as some disputable matters on which the Committee wish to endorse the proposals of the Franchise Committee's report, are dealt with in the following recommendations :

(a) The Committee regard the number of seats allotted to the rural population, as distinct from the urban, as disproportionately low and consider that it should receive a larger share of representation. They also think that an attempt should be made to secure better representation of the urban wage-earning class ; and they are convinced that an effort should be made to remedy in part at least the present disparity between the size of the electorates in the different provinces. In all those matters no definite instructions need be given. The Government of India should be left a wide discretion in adjusting the figures, subject, however, to the understanding that the adjustment should be effected in all cases rather by enlargement than by diminution of the representation proposed in the Franchise Committee's report.

(b) The Committee are of opinion that the representation proposed for the depressed classes is inadequate. Within this definition are comprised, as shown in the report of the Franchise Committee, a large proportion of the whole population of India. They think that the Government of India should, as it advises, be instructed to give such classes a larger share of representation by nomination, regard being had to the numbers of depressed classes in each province, and after consultation with the Local Governments. This representation should, if necessary, be in addition to, but not in diminution of, the general electorate. Whenever possible, other persons than members of the Civil Services should be selected to represent the depressed classes, but if a member of those services, specially qualified for this purpose, has to be appointed, his nomination should not operate to increase the maximum ratio of official seats.

(c) In the Madras Presidency the Committee consider that the non-Brahmins must be provided with separate representation by means of the reservation of seats. The Brahmins and non-Brahmins should be invited to settle the matter by negotiation among themselves ; and it would only be, if agreement cannot be reached in that way, that the decision should be referred to an arbitrator appointed for the purpose by the Government of India.

(d) The Committee would recommend that similar treatment be accorded to the Mahrattas in the Bombay Presidency.

(e) The question whether women should or should not be admitted to the franchise on the same terms as men should be left to the newly elected legislative council of each province to settle by resolution. The Government of India should be instructed to make rules so that, if a legislative council so voted, women might be put upon the register of voters in that province.

well as some disputable matters on which the Committee wish to endorse the proposals of the Franchise Committee's report, are dealt with in the following recommendations :

(a) The Committee regard the number of seats allotted to the rural population, as distinct from the urban, as disproportionately low and consider that it should receive a larger share of representation. They also think that an attempt should be made to secure better representation of the urban wage-earning class ; and they are convinced that an effort should be made to remedy in part at least the present disparity between the size of the electorates in the different provinces. In all those matters no definite instructions need be given. The Government of India should be left a wide discretion in adjusting the figures, subject, however, to the understanding that the adjustment should be effected in all cases rather by enlargement than by diminution of the representation proposed in the Franchise Committee's report.

(b) The Committee are of opinion that the representation proposed for the depressed classes is inadequate. Within this definition are comprised, as shown in the report of the Franchise Committee, a large proportion of the whole population of India. They think that the Government of India should, as it advises, be instructed to give such classes a larger share of representation by nomination, regard being had to the numbers of depressed classes in each province, and after consultation with the Local Governments. This representation should, if necessary, be in addition to, but not in diminution of, the general electorate. Whenever possible, other persons than members of the Civil Services should be selected to represent the depressed classes, but if a member of those services, specially qualified for this purpose, has to be appointed, his nomination should not operate to increase the maximum ratio of official seats.

(c) In the Madras Presidency the Committee consider that the non-Brahmins must be provided with separate representation by means of the reservation of seats. The Brahmins and non-Brahmins should be invited to settle the matter by negotiation among themselves ; and it would only be, if agreement cannot be reached in that way, that the decision should be referred to an arbitrator appointed for the purpose by the Government of India.

(d) The Committee would recommend that similar treatment be accorded to the Mahrattas in the Bombay Presidency.

(e) The question whether women should or should not be admitted to the franchise on the same terms as men should be left to the newly elected legislative council of each province to settle by resolution. The Government of India should be instructed to make rules so that, if a legislative council so voted, women might be put upon the register of voters in that province.

The Committee have not felt able to settle this question themselves, as urged by the majority of witnesses who appeared before them. It seems to them to go deep into the social system and susceptibilities of India, and, therefore, to be a question which can only, with any prudence, be settled in accordance with the wishes of Indians themselves as constitutionally expressed.

(f) The Committee are of opinion that the franchise as settled by the rules to be made under this Act should not be altered for the first ten years, and that it should at present be outside the power of the Legislative Councils to make any alteration in the franchise. The recommendation, therefore, in respect of woman suffrage, is to be regarded as altogether exceptional, and as not forming any precedent in respect of proposals for other alterations.

(g) The special representation of landholders in the provinces should be reconsidered by the Government of India in consultation with the local governments.

(h) The franchise for the University seats should be extended to all graduates of over seven years' standing.

(i) The Government of India should be instructed to consult with the Government of Bengal in respect of the representation of Europeans in Bengal. It appears to the Committee that there are good reasons for a readjustment of that representation. The recommendations of the report of the Franchise Committee in respect of European representation in other provinces may be accepted.

(j) The question whether the rulers and subjects of Indian States may be registered as electors or may be elected to the legislative councils should be left to be settled in each case by the local government of the province.

(k) The Committee are of opinion that dismissal from the service of the government in India should not be a disqualification for election, but that a criminal conviction entailing a sentence of more than six months' imprisonment should be a disqualification for five years from the date of the expiration of the sentence.

(l) The compromise suggested by the Franchise Committee in respect of the residential qualification of candidates for legislative councils whereby the restriction was to be imposed only in the provinces of Bombay, the Punjab, and the Central Provinces may be accepted.

(m) The recommendations of the Franchise Committee in respect of the proportionate representations of Mohammedans, based on the Lucknow compact, may be accepted.

Two further observations must be made on this question of franchise. It seems to the Committee that the principle of proportional representation may be found to be particularly applicable to the

The Committee have not felt able to settle this question themselves, as urged by the majority of witnesses who appeared before them. It seems to them to go deep into the social system and susceptibilities of India, and, therefore, to be a question which can only, with any prudence, be settled in accordance with the wishes of Indians themselves as constitutionally expressed.

(f) The Committee are of opinion that the franchise as settled by the rules to be made under this Act should not be altered for the first ten years, and that it should at present be outside the power of the Legislative Councils to make any alteration in the franchise. The recommendation, therefore, in respect of woman suffrage, is to be regarded as altogether exceptional, and as not forming any precedent in respect of proposals for other alterations.

(g) The special representation of landholders in the provinces should be reconsidered by the Government of India in consultation with the local governments.

(h) The franchise for the University seats should be extended to all graduates of over seven years' standing.

(i) The Government of India should be instructed to consult with the Government of Bengal in respect of the representation of Europeans in Bengal. It appears to the Committee that there are good reasons for a readjustment of that representation. The recommendations of the report of the Franchise Committee in respect of European representation in other provinces may be accepted.

(j) The question whether the rulers and subjects of Indian States may be registered as electors or may be elected to the legislative councils should be left to be settled in each case by the local government of the province.

(k) The Committee are of opinion that dismissal from the service of the government in India should not be a disqualification for election, but that a criminal conviction entailing a sentence of more than six months' imprisonment should be a disqualification for five years from the date of the expiration of the sentence.

(l) The compromise suggested by the Franchise Committee in respect of the residential qualification of candidates for legislative councils whereby the restriction was to be imposed only in the provinces of Bombay, the Punjab, and the Central Provinces may be accepted.

(m) The recommendations of the Franchise Committee in respect of the proportionate representations of Mohammedans, based on the Lucknow compact, may be accepted.

Two further observations must be made on this question of franchise. It seems to the Committee that the principle of proportional representation may be found to be particularly applicable to the

circumstances of India, and they recommend that this suggestion be fully explored, so that there may be material for consideration by the Statutory Commission when it sits at the end of ten years. Further it has been strongly represented to the Committee, and the Committee are themselves firmly convinced, that a complete and stringent Corrupt Practices Act should be passed and brought into operation before the first elections for the legislative councils. There is no such Act at present in existence in India, and the Committee are convinced that it will not be less required in India than it is in other countries.

Clause 9. The Committee have considered carefully the question who is to preside over the legislative councils in the provinces. They are of opinion that the Governor should not preside, and they advise that, for a period of four years, the President should be appointed by the Governor. Wherever possible it would be a great advantage if someone could be found for this purpose who had had parliamentary experience. The legislative council should itself elect a Vice President, and at the end of four years the nominated President would disappear, and the President and Vice-President would be elected by the councils. The Committee attribute the greatest importance to this question of the Presidency of the legislative council. It will, in their opinion, conduce very greatly to the successful working of the new councils if they are imbued from the commencement with the spirit and conventions of parliamentary procedure as developed in the Imperial Parliament. The Committee will recur to this subject in dealing with the question of the President of the Legislative Assembly of India.

Clause 11. The Committee think that the provincial budget should be submitted to the vote of the legislative council, subject to the exemption from this process of certain charges of a special or recurring character which have been set out in the Bill. In cases where the council alter the provision for a transferred subject, the Committee consider that the Governor would be justified, if so advised by his ministers, in re-submitting the provision to the council for a review of their former decision; but they do not apprehend that any statutory prescription to that effect is required. Where the council have reduced a provision for a reserved subject which the Governor considers essential to the proper administration of the subject concerned, he will have a power of restoration. The Committee wish it to be perfectly clear that this power is real and that its exercise should not be regarded as unusual or arbitrary; unless the Governor has the right to secure supply for those services for which he remains responsible to Parliament, that responsibility cannot justly be fastened upon him.

Whenever the necessity for new taxation arises, as arise it must, the questions involved should be threshed out by both parts of the Government in consultation together, and it is especially important that in this matter both parts of the Government should, if possible,

the first 10 years of the 21st century. The authors argue that the current business environment is characterized by rapid technological change, globalization, and a focus on innovation and entrepreneurship. They suggest that management education must evolve to meet these challenges by emphasizing critical thinking, problem-solving, and leadership skills. The authors also discuss the importance of ethics and social responsibility in management education.

The authors further explore the role of management education in preparing students for the future of work. They argue that management education should focus on developing students' ability to adapt to change and to work in diverse, global environments. They also discuss the importance of fostering a sense of social responsibility and ethical awareness in students. The authors conclude by suggesting that management education should be a dynamic and evolving field that responds to the needs of the business world and society.

In addition to the main text, the article includes a section on "Future Directions for Management Education." This section discusses the challenges and opportunities facing management education in the 21st century. The authors argue that management education must continue to evolve and adapt to the changing business environment. They suggest that future research should focus on understanding the needs of students and employers, and on developing new teaching methods and programs that address these needs. The authors also discuss the importance of fostering a sense of social responsibility and ethical awareness in students.

The article concludes with a call to action for management educators. The authors argue that management education has a responsibility to prepare students for the challenges of the future. They suggest that management educators should focus on developing students' critical thinking, problem-solving, and leadership skills, and on fostering a sense of social responsibility and ethical awareness. The authors also suggest that management educators should continue to research and innovate in the field of management education.

circumstances of India, and they recommend that this suggestion be fully explored, so that there may be material for consideration by the Statutory Commission when it sits at the end of ten years. Further it has been strongly represented to the Committee, and the Committee are themselves firmly convinced, that a complete and stringent Corrupt Practices Act should be passed and brought into operation before the first elections for the legislative councils. There is no such Act at present in existence in India, and the Committee are convinced that it will not be less required in India than it is in other countries.

Clause 9. The Committee have considered carefully the question who is to preside over the legislative councils in the provinces. They are of opinion that the Governor should not preside, and they advise that, for a period of four years, the President should be appointed by the Governor. Wherever possible it would be a great advantage if someone could be found for this purpose who had had parliamentary experience. The legislative council should itself elect a Vice President, and at the end of four years the nominated President would disappear, and the President and Vice-President would be elected by the councils. The Committee attribute the greatest importance to this question of the Presidency of the legislative council. It will, in their opinion, conduce very greatly to the successful working of the new councils if they are imbued from the commencement with the spirit and conventions of parliamentary procedure as developed in the Imperial Parliament. The Committee will recur to this subject in dealing with the question of the President of the Legislative Assembly of India.

Clause 11. The Committee think that the provincial budget should be submitted to the vote of the legislative council, subject to the exemption from this process of certain charges of a special or recurring character which have been set out in the Bill. In cases where the council alter the provision for a transferred subject, the Committee consider that the Governor would be justified, if so advised by his ministers, in re-submitting the provision to the council for a review of their former decision; but they do not apprehend that any statutory prescription to that effect is required. Where the council have reduced a provision for a reserved subject which the Governor considers essential to the proper administration of the subject concerned, he will have a power of restoration. The Committee wish it to be perfectly clear that this power is real and that its exercise should not be regarded as unusual or arbitrary; unless the Governor has the right to secure supply for those services for which he remains responsible to Parliament, that responsibility cannot justly be fastened upon him.

Whenever the necessity for new taxation arises, as arise it must, the questions involved should be threshed out by both parts of the Government in consultation together, and it is especially important that in this matter both parts of the Government should, if possible,

be in agreement when the proposals of the Government are laid before the legislature.

Clause 13.—The Committee have rejected the plan of Grand Committees as drafted originally in the Bill. They have done so because in their opinion the Grand Committee did not give the Governor the power of securing legislation in a crisis in respect of those matters for which he is held responsible, and because in respect of ordinary legislation about reserved subjects it perpetuated the system of securing legislation by what is known as the "official bloc," which has been the cause of great friction and heartburning. The responsibility for legislation on reserved subjects is with the Governor in Council, and, when the "official bloc" has been put into operation, it has been put into operation by him, and is merely an indirect way of asserting his responsibility. The Committee think it much better that there should be no attempt to conceal the fact that the responsibility is with the Governor in Council, and they recommend a process by which the Governor should be empowered to pass an Act in respect of any reserved subject, if he considers that the Act is necessary for the proper fulfilment of his responsibility to Parliament. He should not do so until he has given every opportunity for the matter to be thoroughly discussed in the legislative council, and as a sensible man he should, of course, endeavour to carry the legislative council with him in the matter by the strength of his case. But, if he finds that cannot be so, then he should have the power to proceed on his own responsibility. Acts passed on his sole responsibility should be reserved by the Governor-General for His Majesty's pleasure, and be laid before Parliament. His Majesty will necessarily be advised by the Secretary of State for India, and the responsibility for the advice to be given to His Majesty can only rest with the Secretary of State. But the Committee suggest that the Standing Committee of Parliament, whose appointment they have advised, should be specially consulted about Acts of this character. Provision, however, is made in the Bill for the avoidance of delay in case of a grave emergency by giving the Governor-General power to assent to the Act without reserving it, though this of course would not prevent subsequent disallowance by His Majesty in Council.

Clause 15.—The Committee have two observations to make on the working of this Clause. On the one hand, they do not think that any change in the boundaries of a province should be made without due consideration of the views of the legislative council of the province. On the other hand, they are of opinion that any clear request made by a majority of the members of a legislative council representing a distinctive racial or linguistic territorial unit for its constitution under this Clause as a sub-province or a separate province should be taken as a *prima facie* case on the strength of which a commission of inquiry might be appointed by the Secretary of State, and that it should not be a bar to the appointment of such

be in agreement when the proposals of the Government are laid before the legislature.

Clause 13.—The Committee have rejected the plan of Grand Committees as drafted originally in the Bill. They have done so because in their opinion the Grand Committee did not give the Governor the power of securing legislation in a crisis in respect of those matters for which he is held responsible, and because in respect of ordinary legislation about reserved subjects it perpetuated the system of securing legislation by what is known as the "official bloc," which has been the cause of great friction and heartburning. The responsibility for legislation on reserved subjects is with the Governor in Council, and, when the "official bloc" has been put into operation, it has been put into operation by him, and is merely an indirect way of asserting his responsibility. The Committee think it much better that there should be no attempt to conceal the fact that the responsibility is with the Governor in Council, and they recommend a process by which the Governor should be empowered to pass an Act in respect of any reserved subject, if he considers that the Act is necessary for the proper fulfilment of his responsibility to Parliament. He should not do so until he has given every opportunity for the matter to be thoroughly discussed in the legislative council, and as a sensible man he should, of course, endeavour to carry the legislative council with him in the matter by the strength of his case. But, if he finds that cannot be so, then he should have the power to proceed on his own responsibility. Acts passed on his sole responsibility should be reserved by the Governor-General for His Majesty's pleasure, and be laid before Parliament. His Majesty will necessarily be advised by the Secretary of State for India, and the responsibility for the advice to be given to His Majesty can only rest with the Secretary of State. But the Committee suggest that the Standing Committee of Parliament, whose appointment they have advised, should be specially consulted about Acts of this character. Provision, however, is made in the Bill for the avoidance of delay in case of a grave emergency by giving the Governor-General power to assent to the Act without reserving it, though this of course would not prevent subsequent disallowance by His Majesty in Council.

Clause 15.—The Committee have two observations to make on the working of this Clause. On the one hand, they do not think that any change in the boundaries of a province should be made without due consideration of the views of the legislative council of the province. On the other hand, they are of opinion that any clear request made by a majority of the members of a legislative council representing a distinctive racial or linguistic territorial unit for its constitution under this Clause as a sub-province or a separate province should be taken as a *prima facie* case on the strength of which a commission of inquiry might be appointed by the Secretary of State, and that it should not be a bar to the appointment of such

a commission of inquiry that the majority of the legislative council of the province in question is opposed to the request of the minority representing such a distinctive territorial unit.

PART II.

Clause 18.—As will be explained below, the Committee do not accept the device, in the Bill as drafted, of carrying government measures through the Council of State without reference to the Legislative Assembly, in cases where the latter body cannot be got to assent to a law which the Governor-General considers essential. Under the scheme which the Committee propose to substitute for this procedure, there is no necessity to retain the Council of State as an organ for government legislation. It should therefore be reconstituted from the commencement as a true Second Chamber. They recommend that it should consist of sixty members, of whom not more than twenty should be official members. The Franchise Committee advise that the non-official members should be elected by the same group of persons as elect the members of the Legislative Assembly and in the same constituencies. This is a plan which the Committee could, in no circumstances, accept. They hope and believe that a different system of election for the Council of State can be devised by the time the constitution embodied in this Bill comes into operation, and they recommend that the Government of India be enjoined forthwith to make suggestions accordingly, to which effect can be given without delaying the inauguration of the new constitution. If the advice of the Committee that it be re-appointed for the purpose of considering the rules to be framed under this Bill be approved, it should have an opportunity of considering the proposals made for the election of the Council of State.

Clause 19.—For the Legislative Assembly the Committee are equally unwilling to accept, as a permanent arrangement, the method of indirect election proposed in the report of the Franchise Committee. If by no other course it were possible to avoid delay in bringing the constitution enacted by the Bill into operation, the Committee would acquiesce in that method for a preliminary period of three years. But they are not convinced that delay would be involved in preparing a better scheme of election, and they endorse the views expressed by the Government of India in paragraph 39 of its despatch dealing with the subject. They accordingly advise that the Government of India be instructed at once to make recommendations to this effect at the earliest possible moment. These recommendations as embodied in draft rules would also be subject to examination by this Committee if re-appointed.

Clause 20.—The Committee think that the President of the Legislative Assembly should for four years be a person appointed by the Governor-General. He should be qualified by experience in the House of Commons and a knowledge of parliamentary procedure, precedents, and conventions. He should be the guide and adviser

a commission of inquiry that the majority of the legislative council of the province in question is opposed to the request of the minority representing such a distinctive territorial unit.

PART II.

Clause 18.—As will be explained below, the Committee do not accept the device, in the Bill as drafted, of carrying government measures through the Council of State without reference to the Legislative Assembly, in cases where the latter body cannot be got to assent to a law which the Governor-General considers essential. Under the scheme which the Committee propose to substitute for this procedure, there is no necessity to retain the Council of State as an organ for government legislation. It should therefore be reconstituted from the commencement as a true Second Chamber. They recommend that it should consist of sixty members, of whom not more than twenty should be official members. The Franchise Committee advise that the non-official members should be elected by the same group of persons as elect the members of the Legislative Assembly and in the same constituencies. This is a plan which the Committee could, in no circumstances, accept. They hope and believe that a different system of election for the Council of State can be devised by the time the constitution embodied in this Bill comes into operation, and they recommend that the Government of India be enjoined forthwith to make suggestions accordingly, to which effect can be given without delaying the inauguration of the new constitution. If the advice of the Committee that it be re-appointed for the purpose of considering the rules to be framed under this Bill be approved, it should have an opportunity of considering the proposals made for the election of the Council of State.

Clause 19.—For the Legislative Assembly the Committee are equally unwilling to accept, as a permanent arrangement, the method of indirect election proposed in the report of the Franchise Committee. If by no other course it were possible to avoid delay in bringing the constitution enacted by the Bill into operation, the Committee would acquiesce in that method for a preliminary period of three years. But they are not convinced that delay would be involved in preparing a better scheme of election, and they endorse the views expressed by the Government of India in paragraph 39 of its despatch dealing with the subject. They accordingly advise that the Government of India be instructed at once to make recommendations to this effect at the earliest possible moment. These recommendations as embodied in draft rules would also be subject to examination by this Committee if re-appointed.

Clause 20.—The Committee think that the President of the Legislative Assembly should for four years be a person appointed by the Governor-General. He should be qualified by experience in the House of Commons and a knowledge of parliamentary procedure, precedents, and conventions. He should be the guide and adviser

of the Presidents of the provincial councils, and he should be chosen with a view to the influence which it is hoped he would have on the whole history of parliamentary procedure in India. He should be paid an adequate salary.

Clause 25.—This is a new provision for the submission of the Indian Budget to the vote of the Legislative Assembly, on the understanding that this body is constituted as a chamber reasonably representative in character and elected directly by suitable constituencies. The Committee consider it necessary (as suggested to them by the consolidated fund charges in the Imperial Parliament) to exempt certain charges of a special or recurring nature, which have been set out in the Bill, *e.g.* the cost of defence, the debt charges, and certain fixed salaries, from the process of being voted. But otherwise they would leave the Assembly free to criticise and vote the estimates of expenditure of the Government of India. It is not, however, within the scheme of the Bill to introduce at the present stage any measure of responsible government into the central administration, and a power must be reserved to the Governor-General in Council of treating as sanctioned any expenditure which the Assembly may have refused to vote if he considers the expenditure to be necessary for the fulfilment of his responsibilities for the good government of the country. It should be understood from the beginning that this power of the Governor-General in Council is real, and that it is meant to be used if and when necessary.

Clause 26.—For reasons which prompted their rejection of the process of certification by a Governor to a grand committee in a province, the Committee are opposed to the proposals in the Bill which would have enabled the Governor-General to refer to the Council of State, and to obtain by virtue of his official majority in that body, any legislation which the lower chamber refuse to accept, but which he regards as essential to the discharge of his duties. The Committee have no hesitation in accepting the view that the Governor-General in Council should in all circumstances be fully empowered to secure legislation which is required for the discharge of his responsibilities; but they think it is unworthy that such responsibility should be concealed through the action of a Council of State specially devised in its composition to secure the necessary powers. They believe that in such a case it would add strength to the Government of India to act before the world on its own responsibility. In order, however, that Parliament may be fully apprised of the position of the considerations which led to this exceptional procedure, they advise that all Acts passed in this manner should be laid before Parliament, who would naturally consider the opinion of the standing committee already referred to.

Clause 28.—The recommendation of the Committee is that the present limitation on the number of the members of the Governor-General's Executive Council should be removed, that three members of that Council should continue to be public servants or ex-public

of the Presidents of the provincial councils, and he should be chosen with a view to the influence which it is hoped he would have on the whole history of parliamentary procedure in India. He should be paid an adequate salary.

Clause 25.—This is a new provision for the submission of the Indian Budget to the vote of the Legislative Assembly, on the understanding that this body is constituted as a chamber reasonably representative in character and elected directly by suitable constituencies. The Committee consider it necessary (as suggested to them by the consolidated fund charges in the Imperial Parliament) to exempt certain charges of a special or recurring nature, which have been set out in the Bill, *e.g.* the cost of defence, the debt charges, and certain fixed salaries, from the process of being voted. But otherwise they would leave the Assembly free to criticise and vote the estimates of expenditure of the Government of India. It is not, however, within the scheme of the Bill to introduce at the present stage any measure of responsible government into the central administration, and a power must be reserved to the Governor-General in Council of treating as sanctioned any expenditure which the Assembly may have refused to vote if he considers the expenditure to be necessary for the fulfilment of his responsibilities for the good government of the country. It should be understood from the beginning that this power of the Governor-General in Council is real, and that it is meant to be used if and when necessary.

Clause 26.—For reasons which prompted their rejection of the process of certification by a Governor to a grand committee in a province, the Committee are opposed to the proposals in the Bill which would have enabled the Governor-General to refer to the Council of State, and to obtain by virtue of his official majority in that body, any legislation which the lower chamber refuse to accept, but which he regards as essential to the discharge of his duties. The Committee have no hesitation in accepting the view that the Governor-General in Council should in all circumstances be fully empowered to secure legislation which is required for the discharge of his responsibilities; but they think it is unworthy that such responsibility should be concealed through the action of a Council of State specially devised in its composition to secure the necessary powers. They believe that in such a case it would add strength to the Government of India to act before the world on its own responsibility. In order, however, that Parliament may be fully apprised of the position of the considerations which led to this exceptional procedure, they advise that all Acts passed in this manner should be laid before Parliament, who would naturally consider the opinion of the standing committee already referred to.

Clause 28.—The recommendation of the Committee is that the present limitation on the number of the members of the Governor-General's Executive Council should be removed, that three members of that Council should continue to be public servants or ex-public

servants who have had not less than ten years' experience in the service of the Crown in India; that one member of the Council should have definite legal qualifications, but that those qualifications may be gained in India as well as in the United Kingdom; and that not less than three members of the Council should be Indians. In this connection it must be borne in mind that the members of the Council drawn from the ranks of the public servants will, as time goes on, be more and more likely to be of Indian rather than of European extraction.

Clause 29.—The Committee have inserted this provision to allow of the selection of members of the legislature who will be able to undertake duties similar to those of the Parliamentary Under-Secretaries in this country. It should be entirely at the discretion of the Governor-General to say to which departments these officers should be attached, and to define the scope of their duties.

PART III.

Clause 30.—The Committee think that all charges of the India Office, not being "agency" charges, should be paid out of moneys to be provided by Parliament.

Clause 31.—The Committee are not in favour of the abolition of the Council of India. They think that, at any rate for some time to come, it will be absolutely necessary that the Secretary of State should be advised by persons of Indian experience, and they are convinced that, if no such Council existed, the Secretary of State would have to form an informal one if not a formal one. Therefore, they think it much better to continue a body which has all the advantages behind it of tradition and authority, although they would not debar the readjustment of its work so as to make it possible to introduce what is known as the portfolio system. They think, also, that its constitution may advantageously be modified by the introduction of more Indians into it and by shortening of the period of the service upon it, in order to ensure a continuous flow of fresh experience from India and to relieve Indian members from the necessity of spending so long a period as seven years in England.

Clause 33.—The Committee have given most careful consideration to the relations of the Secretary of State with the Government of India, and through it with the provincial governments. In the relations of the Secretary of State with the Governor-General in Council the Committee are not of opinion that any statutory change can be made, so long as the Governor-General remains responsible to Parliament, but in practice the conventions which now govern these relations may wisely be modified to meet fresh circumstances caused by the creation of a Legislative Assembly with a large elected majority. In the exercise of his responsibility to Parliament, which he cannot delegate to anyone else, the Secretary of State may reasonably consider that only in exceptional circumstances should

servants who have had not less than ten years' experience in the service of the Crown in India; that one member of the Council should have definite legal qualifications, but that those qualifications may be gained in India as well as in the United Kingdom; and that not less than three members of the Council should be Indians. the program, the program director, and the program faculty. The program director is responsible for the overall management of the program, including the development of the program's vision, mission, and goals, and the implementation of the program's curriculum and policies. The program faculty is responsible for the development and delivery of the program's courses, and the assessment of student learning. The program director and the program faculty work together to ensure the program's quality and effectiveness.

Conclusion

The program director and the program faculty are the key stakeholders in the management of the program. They are responsible for the development and delivery of the program's curriculum and policies, and the assessment of student learning. The program director and the program faculty work together to ensure the program's quality and effectiveness. The program director is responsible for the overall management of the program, including the development of the program's vision, mission, and goals, and the implementation of the program's curriculum and policies. The program faculty is responsible for the development and delivery of the program's courses, and the assessment of student learning. The program director and the program faculty work together to ensure the program's quality and effectiveness.

he be called upon to intervene in matters of purely Indian interest where the Government and the Legislature of India are in agreement.

This examination of the general proposition leads inevitably to the consideration of one special case of non-intervention. Nothing is more likely to endanger the good relations between India and Great Britain than a belief that India's fiscal policy is dictated from Whitehall in the interests of the trade of Great Britain. That such a belief exists at the moment there can be no doubt. That there ought to be no room for it in the future is equally clear. India's position in the Imperial Conference opened the door to negotiation between India and the rest of the Empire, but negotiation without power to legislate is likely to remain ineffective. A satisfactory solution of the question can only be guaranteed by the grant of liberty to the Government of India to devise those tariff arrangements which seem best fitted to India's needs as an integral portion of the British Empire. It cannot be guaranteed by statute without limiting the ultimate power of Parliament to control the administration of India, and without limiting the power of veto which rests in the Crown; and neither of these limitations finds a place in any of the Statutes in the British Empire. It can only, therefore, be assured by an acknowledgment of a convention. Whatever be the right fiscal policy for India, for the needs of her consumers as well as for her manufacturers, it is quite clear that she should have the same liberty to consider her interests as Great Britain, Australia, New Zealand, Canada and South Africa. In the opinion of the Committee, therefore, the Secretary of State should as far as possible avoid interference on this subject when the Government of India and its Legislature are in agreement, and they think that his intervention, when it does take place, should be limited to safeguarding the international obligations of the Empire in any fiscal arrangements within the Empire to which His Majesty's Government is a party.

The relations of the Secretary of State and of the Government of India with provincial governments should, in the Committee's judgment, be regulated by similar principles, so far as the reserved subjects are concerned. It follows, therefore, that in purely provincial matters, which are reserved, where the provincial government and legislature are in agreement, their view should ordinarily be allowed to prevail, though it is necessary to bear in mind the fact that some reserved subjects do cover matters in which the central government is closely concerned. Over transferred subjects, on the other hand, the control of the Governor-General in Council, and thus of the Secretary of State, should be restricted in future within the narrowest possible limits, which will be defined by rules under sub-clause 3 of Clause 1 of the Bill.

Rules under this clause will be subsidiary legislation of sufficient moment to justify their being brought especially to the notice of Parliament. The Secretary of State might conveniently discuss them with the Standing Committee whose creation has been recom-

he be called upon to intervene in matters of purely Indian interest where the Government and the Legislature of India are in agreement.

This examination of the general proposition leads inevitably to the consideration of one special case of non-intervention. Nothing is more likely to endanger the good relations between India and Great Britain than a belief that India's fiscal policy is dictated from Whitehall in the interests of the trade of Great Britain. That such a belief exists at the moment there can be no doubt. That there ought to be no room for it in the future is equally clear. India's position in the Imperial Conference opened the door to negotiation between India and the rest of the Empire, but negotiation without power to legislate is likely to remain ineffective. A satisfactory solution of the question can only be guaranteed by the grant of liberty to the Government of India to devise those tariff arrangements which seem best fitted to India's needs as an integral portion of the British Empire. It cannot be guaranteed by statute without limiting the ultimate power of Parliament to control the administration of India, and without limiting the power of veto which rests in the Crown; and neither of these limitations finds a place in any of the Statutes in the British Empire. It can only, therefore, be assured by an acknowledgment of a convention. Whatever be the right fiscal policy for India, for the needs of her consumers as well as for her manufacturers, it is quite clear that she should have the same liberty to consider her interests as Great Britain, Australia, New Zealand, Canada and South Africa. In the opinion of the Committee, therefore, the Secretary of State should as far as possible avoid interference on this subject when the Government of India and its Legislature are in agreement, and they think that his intervention, when it does take place, should be limited to safeguarding the international obligations of the Empire in any fiscal arrangements within the Empire to which His Majesty's Government is a party.

The relations of the Secretary of State and of the Government of India with provincial governments should, in the Committee's judgment, be regulated by similar principles, so far as the reserved subjects are concerned. It follows, therefore, that in purely provincial matters, which are reserved, where the provincial government and legislature are in agreement, their view should ordinarily be allowed to prevail, though it is necessary to bear in mind the fact that some reserved subjects do cover matters in which the central government is chiefly concerned. Over transferred subjects, on the other hand, the control of the Governor-General in Council, and thus of the Secretary of State, should be restricted in future within the narrowest possible limits, which will be defined by rules under sub-clause 3 of Clause 1 of the Bill.

Rules under this clause will be subsidiary legislation of sufficient moment to justify their being brought especially to the notice of Parliament. The Secretary of State might conveniently discuss them with the Standing Committee whose creation has been recom-

mended in this Report; and Parliament would no doubt consider the opinion of this body when the rules come, as it is proposed that they should do, for acceptance by positive resolution in both Houses. The same procedure is recommended by the Committee for adoption in the case of rules of special or novel importance under other clauses of the Bill. It must be for the Secretary of State to decide which of the many rules that will fall to be drafted by the Government of India can be sufficiently dealt with by the ordinary process of lying on the table of Parliament for a certain number of days. In deciding this point, however, he may naturally have recourse to the advice of the Standing Committee, should it happen to be in session, and obtain their assistance in determining which rules deserve to be made the subject of the more formal procedure by positive resolution.

Clause 35.—This clause carries out the recommendation of Lord Crewe's Committee to appoint a High Commissioner for India, to be paid out of Indian revenues, who will perform for India functions of agency, as distinguished from political functions, analogous to those now performed in the offices of the High Commissioners of the Dominions.

PART IV.

Clause 36. The Committee do not conceal from themselves that the position of the public services in working the new constitutions in the provinces will, in certain circumstances, be difficult. They are of opinion that these services have deserved the admiration and gratitude of the whole Empire. They know that some members of the services regard the wisdom of the proposed changes with grave misgiving, and that some fear that those changes will not tend to the welfare of the Indian masses. They are convinced, however, that the services will accept the changing conditions and the inevitable alteration in their own position, and devote themselves in all loyalty to making a success, so far as in them lies, of the new constitution.

In the provinces, officers serving in a reserved department will be controlled by the Governor in Council, and in a transferred department by the Governor acting with ministers, but in both cases alike the personal concurrence of the Governor should be regarded as essential in the case of all orders of any importance prejudicially affecting the position or prospects of officers appointed by the Secretary of State.

The Committee think that every precaution should be taken to secure to the public servants the career in life to which they looked forward when they were recruited, and they have introduced fresh provisions into this clause to that end. If friction occurs, a re-adjustment of persons and places may often get over the difficulty, and the Governor must always regard it as one of his most important duties to establish a complete understanding between his ministers and the

mended in this Report; and Parliament would no doubt consider the opinion of this body when the rules come, as it is proposed that they should do, for acceptance by positive resolution in both Houses. The same procedure is recommended by the Committee for adoption in the case of rules of special or novel importance under other clauses of the Bill. It must be for the Secretary of State to decide which of the many rules that will fall to be drafted by the Government of India can be sufficiently dealt with by the ordinary process of lying on the table of Parliament for a certain number of days. In deciding this point, however, he may naturally have recourse to the advice of the Standing Committee, should it happen to be in session, and obtain their assistance in determining which rules deserve to be made the subject of the more formal procedure by positive resolution.

Clause 35.—This clause carries out the recommendation of Lord Crewe's Committee to appoint a High Commissioner for India, to be paid out of Indian revenues, who will perform for India functions of agency, as distinguished from political functions, analogous to those now performed in the offices of the High Commissioners of the Dominions.

PART IV.

Clause 36. The Committee do not conceal from themselves that the position of the public services in working the new constitutions in the provinces will, in certain circumstances, be difficult. They are of opinion that these services have deserved the admiration and gratitude of the whole Empire. They know that some members of the services regard the wisdom of the proposed changes with grave misgiving, and that some fear that those changes will not tend to the welfare of the Indian masses. They are convinced, however, that the services will accept the changing conditions and the inevitable alteration in their own position, and devote themselves in all loyalty to making a success, so far as in them lies, of the new constitution.

In the provinces, officers serving in a reserved department will be controlled by the Governor in Council, and in a transferred department by the Governor acting with ministers, but in both cases alike the personal concurrence of the Governor should be regarded as essential in the case of all orders of any importance prejudicially affecting the position or prospects of officers appointed by the Secretary of State.

The Committee think that every precaution should be taken to secure to the public servants the career in life to which they looked forward when they were recruited, and they have introduced fresh provisions into this clause to that end. If friction occurs, a re-adjustment of persons and places may often get over the difficulty, and the Governor must always regard it as one of his most important duties to establish a complete understanding between his ministers and the

officers through whom they will have to work. But if there are members of the service whose doubts as to the changes to be made are so deeply-rooted that they feel they cannot usefully endeavour to take part in them, then the Committee think it would only be fair to those officers that they should be offered an equivalent career elsewhere, if it is in the power of His Majesty's Government to do so, or, in the last resort, that they should be allowed to retire on such pension as the Secretary of State in Council may consider suitable to their period of service.

PART V.

Clause 11. The Committee are of opinion that the Statutory Commission should not be appointed until the expiration of ten years, and that no changes of substance in the constitution, whether in the franchise or in the lists of reserved and transferred subjects or otherwise, should be made in the interval. The Commission will be fully empowered to examine the working of the constitutions in all their details in the provinces, and to advise whether the time has come for full responsible government in each province, or in the alternative whether and to what extent the powers of self government already granted should be extended, or modified, or restricted. It should be clearly understood, also, that the Commission should be empowered to examine into the working of the Government of India and to advise in respect of the Government of India no less than in respect of the provincial governments.

8. This concludes the Committee's specific recommendations on the Bill. There remain certain other topics which do not conveniently fall within any particular clause. The first of these is the treatment of Burma, and after hearing evidence the Committee have not advised that Burma should be included within the scheme. They do not doubt but that the Burmese have deserved and should receive a constitution analogous to that provided in this Bill for their Indian fellow-subjects. But Burma is only by accident part of the responsibility of the Governor General of India. The Burmese are as distinct from the Indians in race and language as they are from the British.

9. Doubts have been expressed from several quarters questioning the financial adjustment proposed between the Central and Provincial Governments in India. Without expressing any opinion on this controversy, the Committee accept and endorse the recommendation of the Government of India that a fully qualified financial commission should be appointed to advise us to the principle on which contributions from the provincial governments to the Central Government should in future be adjusted.

10. The Committee think that it may often greatly assist the political education of India if standing committees of the legislative bodies are attached to certain departments of Government, but they only

officers through whom they will have to work. But if there are members of the service whose doubts as to the changes to be made are so deeply-rooted that they feel they cannot usefully endeavour to take part in them, then the Committee think it would only be fair to those officers that they should be offered an equivalent career elsewhere, if it is in the power of His Majesty's Government to do so, or, in the last resort, that they should be allowed to retire on such pension as the Secretary of State in Council may consider suitable to their period of service.

PART V.

Clause 11. The Committee are of opinion that the Statutory Commission should not be appointed until the expiration of ten years, and that no changes of substance in the constitution, whether in the franchise or in the lists of reserved and transferred subjects or otherwise, should be made in the interval. The Commission will be fully empowered to examine the working of the constitutions in all their details in the provinces, and to advise whether the time has come for full responsible government in each province, or in the alternative whether and to what extent the powers of self government already granted should be extended, or modified, or restricted. It should be clearly understood, also, that the Commission should be empowered to examine into the working of the Government of India and to advise in respect of the Government of India no less than in respect of the provincial governments.

8. This concludes the Committee's specific recommendations on the Bill. There remain certain other topics which do not conveniently fall within any particular clause. The first of these is the treatment of Burma, and after hearing evidence the Committee have not advised that Burma should be included within the scheme. They do not doubt but that the Burmese have deserved and should receive a constitution analogous to that provided in this Bill for their Indian fellow subjects. But Burma is only by accident part of the responsibility of the Governor General of India. The Burmese are as distinct from the Indians in race and language as they are from the British.

9. Doubts have been expressed from several quarters questioning the financial adjustment proposed between the Central and Provincial Governments in India. Without expressing any opinion on this controversy, the Committee accept and endorse the recommendation of the Government of India that a fully qualified financial commission should be appointed to advise as to the principle on which contributions from the provincial governments to the Central Government should in future be adjusted.

10. The Committee think that it may often greatly assist the political education of India if standing committees of the legislative bodies are attached to certain departments of Government, but they only

express this opinion on the understanding that the appointment of such committees, their composition, and the regulations which govern their procedure, shall be matters wholly and exclusively within the discretion of the Governor-General or of the Governor as the case may be.

11. The Committee are impressed by the objections raised by many witnesses to the manner in which certain classes of taxation can be laid upon the people of India by executive action without, in some cases, any statutory limitation of the rates and, in other cases, any adequate prescription by statute of the methods of assessment. They consider that the imposition of new burdens should be gradually brought more within the purview of the Legislature. And in particular, without expressing any judgment on the question whether the land revenue is a rent or tax, they advise that the process of revising the land revenue assessments ought to be brought under closer regulation by statute as soon as possible. At present the statutory basis for charging revenue on the land varies in different provinces; but in some at least the pitch of assessment is entirely at the discretion of the executive government. No branch of the administration is regulated with greater elaboration or care; but the people who are most affected have no voice in the shaping of the system, and the rules are often obscure and imperfectly understood by those who pay the revenue. The Committee are of opinion that the time has come to embody in the law the main principles by which the land revenue is determined, the methods of valuation, the pitch of assessment, the periods of revision, the graduation of enhancements, and the other chief processes which touch the well-being of the revenue payers. The subject is one which probably would not be transferred to ministers until the electorate included a satisfactory representation of rural interests, those of the tenantry as well as of the landlords; and the system should be established on a clear statutory basis before this change takes place.

12. The Committee have not hitherto touched on the subject of education in India, and it is far too large for them to make any attempt to deal with it adequately. They have accepted the recommendation of the Functions Committee that, subject to certain reservations about the Universities, the responsibility for the whole field of education in each province should be transferred to ministers. They attach much importance, however, to the educational advancement of the depressed and backward classes, and they trust that the subject will receive special attention from ministers. They are also impressed by the advantage of Boards such as Sir Michael Sadler has advised in Bengal, for the assistance of ministers in controlling the different grades of education, and they trust that ministers will see their way from the outset to constitute such Boards in every province. The Committee would similarly commend to ministers the advisability of creating local government departments in the provinces.

express this opinion on the understanding that the appointment of such committees, their composition, and the regulations which govern their procedure, shall be matters wholly and exclusively within the discretion of the Governor-General or of the Governor as the case may be.

11. The Committee are impressed by the objections raised by many witnesses to the manner in which certain classes of taxation can be laid upon the people of India by executive action without, in some cases, any statutory limitation of the rates and, in other cases, any adequate prescription by statute of the methods of assessment. They consider that the imposition of new burdens should be gradually brought more within the purview of the Legislature. And in particular, without expressing any judgment on the question whether the land revenue is a rent or tax, they advise that the process of revising the land revenue assessments ought to be brought under closer regulation by statute as soon as possible. At present the statutory basis for charging revenue on the land varies in different provinces; but in some at least the pitch of assessment is entirely at the discretion of the executive government. No branch of the administration is regulated with greater elaboration or care; but the people who are most affected have no voice in the shaping of the system, and the rules are often obscure and imperfectly understood by those who pay the revenue. The Committee are of opinion that the time has come to embody in the law the main principles by which the land revenue is determined, the methods of valuation, the pitch of assessment, the periods of revision, the graduation of enhancements, and the other chief processes which touch the well-being of the revenue payers. The subject is one which probably would not be transferred to ministers until the electorate included a satisfactory representation of rural interests, those of the tenantry as well as of the landlords; and the system should be established on a clear statutory basis before this change takes place.

12. The Committee have not hitherto touched on the subject of education in India, and it is far too large for them to make any attempt to deal with it adequately. They have accepted the recommendation of the Functions Committee that, subject to certain reservations about the Universities, the responsibility for the whole field of education in each province should be transferred to ministers. They attach much importance, however, to the educational advancement of the depressed and backward classes, and they trust that the subject will receive special attention from ministers. They are also impressed by the advantage of Boards such as Sir Michael Sadler has advised in Bengal, for the assistance of ministers in controlling the different grades of education, and they trust that ministers will see their way from the outset to constitute such Boards in every province. The Committee would similarly commend to ministers the advisability of creating local government departments in the provinces.

13. The Committee attach the greatest importance to the formation in each provincial government of a strong department of Finance which will serve both sides of the Government alike.

14. The Committee have been greatly struck by the earnest representations made to them by several witnesses, both of British and Indian birth, to the effect that the Government of India and the provincial governments must become more vocal, and put forth their view of what the good of India requires with more courage and more persistence than they have in the past. It has been represented to them that it will be of the utmost importance in the future that the Government of India and the provincial governments should have means of explaining to the people of India the reasons why things are done, the reasons which underlie decisions, and the argument against proposals which they consider will be detrimental to the welfare of the country. It was represented to the Committee that at present, to a great extent, the case for the policy of the Government of India and of the provincial governments is unknown to the masses of Indians, whereas the case against that policy is becoming every day more widely disseminated by means of the vernacular press. They are glad to think that this opinion is also shared by the Secretary of State for India and the Viceroy. It is dealt with in paragraph 326 of their report on Indian Constitutional Reforms.

15. In conclusion the Committee emphatically repudiate the suggestion that the changes in this Bill in the form of the provincial governments of India imply any condemnation of the present system of government in India. The Government of India has accomplished great things for India's good, and one of its greatest services has been the introduction into India of a reign of law, to which the Government itself is as much subject as the people it governs. It is no reproach to it that in form it has been everywhere autocratic. So long as Parliament on the one hand did not bestow any form of constitutional self-government on any part of India, and on the other hand held the Government of India rigidly responsible to itself for its every action, it could not be otherwise in the provinces any more than at the central seat of government. But, whatever the form, the spirit of its being everywhere and always has been effort for the welfare of the masses of the people of India.

16. The Committee have directed the Minutes of Proceedings, together with Appendices, to be laid before both Houses of Parliament.

13. The Committee attach the greatest importance to the formation in each provincial government of a strong department of Finance which will serve both sides of the Government alike.

14. The Committee have been greatly struck by the earnest representations made to them by several witnesses, both of British and Indian birth, to the effect that the Government of India and the provincial governments must become more vocal, and put forth their view of what the good of India requires with more courage and more persistence than they have in the past. It has been represented to them that it will be of the utmost importance in the future that the Government of India and the provincial governments should have means of explaining to the people of India the reasons why things are done, the reasons which underlie decisions, and the argument against proposals which they consider will be detrimental to the welfare of the country. It was represented to the Committee that at present, to a great extent, the case for the policy of the Government of India and of the provincial governments is unknown to the masses of Indians, whereas the case against that policy is becoming every day more widely disseminated by means of the vernacular press. They are glad to think that this opinion is also shared by the Secretary of State for India and the Viceroy. It is dealt with in paragraph 326 of their report on Indian Constitutional Reforms.

15. In conclusion the Committee emphatically repudiate the suggestion that the changes in this Bill in the form of the provincial governments of India imply any condemnation of the present system of government in India. The Government of India has accomplished great things for India's good, and one of its greatest services has been the introduction into India of a reign of law, to which the Government itself is as much subject as the people it governs. It is no reproach to it that in form it has been everywhere autocratic. So long as Parliament on the one hand did not bestow any form of constitutional self-government on any part of India, and on the other hand held the Government of India rigidly responsible to itself for its every action, it could not be otherwise in the provinces any more than at the central seat of government. But, whatever the form, the spirit of its being everywhere and always has been effort for the welfare of the masses of the people of India.

16. The Committee have directed the Minutes of Proceedings, together with Appendices, to be laid before both Houses of Parliament.

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.001	0.000	1.2	0.23
Gender of the head of household (Male = 1, Female = 0)	-0.05	0.02	-2.5	0.01
Constant	1.5	0.1	15.0	0.00

The regression results indicate that the age of the head of household has a very small positive effect on the number of children in the household, while the gender of the head of household has a small negative effect. The constant term represents the expected number of children in the household when both independent variables are zero.

APPENDIX B

GOVERNMENT OF INDIA ACT, 1919.

[9 & 10 GEO. 5.]

CHAPTER 101.

An Act to make further provision with respect to the Government of India. [23rd December 1919.] A.D. 1919.

WHEREAS it is the declared policy of Parliament to provide for the increasing association of Indians in every branch of Indian administration, and for the gradual development of self-governing institutions, with a view to the progressive realisation of responsible government in British India as an integral part of the empire :

And whereas progress in giving effect to this policy can only be achieved by successive stages, and it is expedient that substantial steps in this direction should now be taken :

And whereas the time and manner of each advance can be determined only by Parliament, upon whom responsibility lies for the welfare and advancement of the Indian peoples :

And whereas the action of Parliament in such matters must be guided by the co-operation received from those on whom new opportunities of service will be conferred, and by the extent to which it is found that confidence can be reposed in their sense of responsibility :

And whereas concurrently with the gradual development of self governing institutions in the Provinces of India it is expedient to give to those Provinces in provincial matters the largest measure of independence of the Government of India, which is compatible with the due discharge by the latter of its own responsibilities :

Be it therefore enacted by the King's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows :

PART I.

LOCAL GOVERNMENTS.

I. (1) Provision may be made by rules under the Government of India Act, 1915, as amended by the Government of India (Amendment) Act, 1916 (which Act, as so amended, is in this Act referred to as 'the principal Act')—

subjects,
5 & 6
Geo. 5,
c. 61,
6 & 7
Geo. 5,
c. 37.

- (a) for the classification of subjects, in relation to the functions of government, as central and provincial subjects, for the purpose of distinguishing the functions of local governments and local legislatures from the functions of the Governor-General in Council and the Indian legislature ;
 - (b) for the devolution of authority in respect of provincial subjects to local governments, and for the allocation of revenues or other moneys to those governments ;
 - (c) for the use under the authority of the Governor-General in Council of the agency of local governments in relation to central subjects, in so far as such agency may be found convenient, and for determining the financial conditions of such agency ; and
 - (d) for the transfer from among the provincial subjects of subjects (in this Act referred to as "transferred subjects") to the administration of the governor acting with ministers appointed under this Act, and for the allocation of revenues or moneys for the purpose of such administration.
- (2) Without prejudice to the generality of the foregoing powers, rules made for the above mentioned purposes may
- (i) regulate the extent and conditions of such devolution, allocation, and transfer ;
 - (ii) provide for fixing the contributions payable by local governments to the Governor-General in Council, and making such contributions a first charge on allocated revenues or moneys ;
 - (iii) provide for constituting a finance department in any province, and regulating the functions of that department ;
 - (iv) provide for regulating the exercise of the authority vested in the local government of a province over members of the public services therein ;
 - (v) provide for the settlement of doubts arising as to whether any matter does or does not relate to a provincial subject or a transferred subject, and for the treatment of matters which affect both a transferred subject and a subject which is not transferred ; and
 - (vi) make such consequential and supplemental provisions as appear necessary or expedient ;

Provided that, without prejudice to any general power of revoking or altering rules under the principal Act, the rules shall not authorise the revocation or suspension of the transfer of any subject except with the sanction of the Secretary of State in Council.

(3) The powers of superintendence, direction, and control over local governments vested in the Governor-General in Council under the principal Act shall, in relation to transferred subjects, be exercised only for such purposes as may be specified in rules made under that Act, but the Governor-General in Council shall be the sole judge

- (2) Without prejudice to the generality of the foregoing powers, rules made for the above mentioned purposes may
- (i) regulate the extent and conditions of such devolution, allocation, and transfer;
 - (ii) provide for fixing the contributions payable by local governments to the Governor-General in Council, and making such contributions a first charge on allocated revenues or moneys;
 - (iii) provide for constituting a finance department in any province, and regulating the functions of that department;
 - (iv) provide for regulating the exercise of the authority vested in the local government of a province over members of the public services therein;
 - (v) provide for the settlement of doubts arising as to whether any matter does or does not relate to a provincial subject or a transferred subject, and for the treatment of matters which affect both a transferred subject and a subject which is not transferred; and
 - (vi) make such consequential and supplemental provisions as appear necessary or expedient;

Provided that, without prejudice to any general power of revoking or altering rules under the principal Act, the rules shall not authorise the revocation or suspension of the transfer of any subject except with the sanction of the Secretary of State in Council.

(3) The powers of superintendence, direction, and control over local governments vested in the Governor-General in Council under the principal Act shall, in relation to transferred subjects, be exercised only for such purposes as may be specified in rules made under that Act, but the Governor-General in Council shall be the sole judge

as to whether the purpose of the exercise of such powers in any particular case comes within the purposes so specified. A.D. 1919

(4) The expressions "central subjects" and "provincial subjects" as used in this Act mean subjects so classified under the rules.

Provincial subjects, other than transferred subjects, are in this Act referred to as "reserved subjects".

2. (1) The provision in subsection (1) of section thirty of the principal Act, which gives power to local governments to raise money on real or personal estate within the limits of their respective governments by way of mortgage or otherwise, shall have effect as though that provision conferred a power on local governments to raise money on the security of their allocated revenues, and to make proper assurances for that purpose. Borrowing powers of local governments.

(2) Provision may be made by rules under the principal Act as to the conditions under which the power to raise loans on the security of allocated revenues shall be exercised.

(3) The provision in subsection (1) of section thirty of the principal Act, which enables the Secretary of State in Council with the concurrence of a majority of votes at a meeting of the Council of India to prescribe provisions or conditions limiting the power to raise money, shall cease to have effect as regards the power to raise money on the security of allocated revenues.

3. (1) The presidencies of Fort William in Bengal, Fort St. George, and Bombay, and the provinces known as the United Provinces, the Punjab, Bihar and Orissa, the Central Provinces, and Assam, shall each be governed, in relation to reserved subjects, by a governor in council, and in relation to transferred subjects (save as otherwise provided by this Act) by the governor acting with ministers appointed under this Act. Revised system of local government in certain provinces.

The said presidencies and provinces are in this Act referred to as "governor's provinces" and the two first-named presidencies are in this Act referred to as the presidencies of Bengal and Madras.

(2) The provisions of section forty-six to fifty-one of the principal Act, as amended by this Act, shall apply to the United Provinces, the Punjab, Bihar and Orissa, the Central Provinces, and Assam, as they apply to the presidencies of Bengal, Madras, and Bombay: Provided that the governors of the said provinces shall be appointed after consultation with the Governor-General.

4. (1) The governor of a governor's province may, by notification, appoint ministers, not being members of his executive council or other officials, to administer transferred subjects, and any ministers so appointed shall hold office during his pleasure. Appointment of ministers and council secretaries.

There may be paid to any minister so appointed in any province the same salary as is payable to a member of the executive council in that province, unless a smaller salary is provided by vote of the legislative council of the province.

(2) No minister shall hold office for a longer period than six

as to whether the purpose of the exercise of such powers in any particular case comes within the purposes so specified. A.D. 1919

(4) The expressions "central subjects" and "provincial subjects" as used in this Act mean subjects so classified under the rules.

Provincial subjects, other than transferred subjects, are in this Act referred to as "reserved subjects".

2. (1) The provision in subsection (1) of section thirty of the principal Act, which gives power to local governments to raise money on real or personal estate within the limits of their respective governments by way of mortgage or otherwise, shall have effect as though that provision conferred a power on local governments to raise money on the security of their allocated revenues, and to make proper assurances for that purpose. Borrowing powers of local governments.

(2) Provision may be made by rules under the principal Act as to the conditions under which the power to raise loans on the security of allocated revenues shall be exercised.

(3) The provision in subsection (1) of section thirty of the principal Act, which enables the Secretary of State in Council with the concurrence of a majority of votes at a meeting of the Council of India to prescribe provisions or conditions limiting the power to raise money, shall cease to have effect as regards the power to raise money on the security of allocated revenues.

3. (1) The presidencies of Fort William in Bengal, Fort St. George, and Bombay, and the provinces known as the United Provinces, the Punjab, Bihar and Orissa, the Central Provinces, and Assam, shall each be governed, in relation to reserved subjects, by a governor in council, and in relation to transferred subjects (save as otherwise provided by this Act) by the governor acting with ministers appointed under this Act. Revised system of local government in certain provinces.

The said presidencies and provinces are in this Act referred to as "governor's provinces" and the two first-named presidencies are in this Act referred to as the presidencies of Bengal and Madras.

(2) The provisions of section forty-six to fifty-one of the principal Act, as amended by this Act, shall apply to the United Provinces, the Punjab, Bihar and Orissa, the Central Provinces, and Assam, as they apply to the presidencies of Bengal, Madras, and Bombay: Provided that the governors of the said provinces shall be appointed after consultation with the Governor-General.

4. (1) The governor of a governor's province may, by notification, appoint ministers, not being members of his executive council or other officials, to administer transferred subjects, and any ministers so appointed shall hold office during his pleasure. Appointment of ministers and council secretaries.

There may be paid to any minister so appointed in any province the same salary as is payable to a member of the executive council in that province, unless a smaller salary is provided by vote of the legislative council of the province.

(2) No minister shall hold office for a longer period than six

1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 26

Abstract

APRIL 1919, unless he is or becomes an elected member of the local legislature.

(3) In relation to transferred subjects, the Governor shall be guided by the advice of his ministers, unless he is of opinion that it is expedient to depart from that opinion, in which case he may require action to be taken otherwise than in accordance with that advice. Provided that rules may be made under the principal Act for the temporary administration of a transferred subject, when, in a case of emergency, there is no minister in charge of the subject, by such authority and in such manner as may be prescribed by the rules.

(4) The Governor of a Governor's province may at his discretion appoint from among the non-official members of the local legislative council members, who shall hold office during his pleasure, and officiate, with duties in assisting members of the executive council and ministers, as he may assign to them.

There shall be paid to council secretaries so appointed such salary as may be provided by vote of the legislative council.

A council secretary shall cease to hold office if he is absent for more than six months to be a member of the legislative council.

5. (1) The provision in section forty seven of the principal Act, that two of the members of the executive council of the Governor of a province must have been for at least twelve years in the service of the Crown in India, shall have effect as though "one" were substituted for "two," and the provision in that section that the Commander-in-Chief of His Majesty's Forces in India, if resident at Calcutta, Madras, or Bombay, shall, during his continuance there, be a member of the Governor's council, shall cease to have effect.

(2) Provision may be made by rules under the principal Act as to the qualifications to be required in respect of members of the executive council of the Governor in any case where such provision is not made by section forty seven of the principal Act as amended by this section.

6. (1) All orders and other proceedings of the Government of a Governor's province shall be approved to be made by the Governor of the province, and shall be authenticated as the Governor may by rules direct, so, however, that provision shall be made by rules for distinguishing orders and other proceedings relating to transferred subjects from other orders and proceedings.

(Orders and proceedings authenticated as aforesaid shall not be called into question in any legal proceeding on the ground that they were not duly made by the Government of the province.)

(2) The Governor may make rules and orders for the more convenient transaction of business in his executive council and with his ministers, and every order made or not done in accordance with those rules and orders shall be treated as being the order or the act of the Government of the province.

A.D. 1919. months, unless he is or becomes an elected member of the local legislature.

(3) In relation to transferred subjects, the governor shall be guided by the advice of his ministers, unless he sees sufficient cause to dissent from their opinion, in which case he may require action to be taken otherwise than in accordance with that advice. Provided that rules may be made under the principal Act for the temporary administration of a transferred subject where, in case of emergency, owing to a vacancy, there is no minister in charge of the subject, by such authority and in such manner as may be prescribed by the rules.

(4) The governor of a governor's province may, at his discretion appoint from among the non-official members of the local legislature council secretaries, who shall hold office during his pleasure, and discharge such duties in assisting members of the executive council and ministers, as he may assign to them.

There shall be paid to council secretaries so appointed such salary as may be provided by vote of the legislative council.

A council secretary shall cease to hold office if he ceases for more than six months to be a member of the legislative council.

6. (1) All orders and other proceedings of the government of a governor's province shall be expressed to be made by the government of the province, and shall be authenticated as the governor may by rule direct, so, however, that provision shall be made by rule for distinguishing orders and other proceedings relating to transferred subjects from other orders and proceedings.

Orders and proceedings authenticated as aforesaid shall not be called into question in any legal proceeding on the ground that they were not duly made by the government of the province.

(2) The governor may make rules and orders for the more convenient transaction of business in his executive council and with his ministers, and every order made or act done in accordance with those rules and orders shall be treated as being the order or the act of the government of the province.

The governor may also make rules and orders for regulating the relations between his executive council and his ministers for the purpose of the transaction of the business of the local government. A.D. 1919.

Provided that any rules or orders made for the purposes specified in this section which are repugnant to the provisions of any rules made under the principal Act as amended by this Act shall, to the extent of that repugnancy, but not otherwise, be void.

7.—(1) There shall be a legislative council in every governor's province, which shall consist of the members of the executive council and of members nominated or elected as provided by this Act. Composition of governors' legislative councils.

The governor shall not be a member of the legislative council, but shall have the right of addressing the council, and may for that purpose require the attendance of its members.

(2) The number of members of the governors' legislative councils shall be in accordance with the table set out in the First Schedule to this Act; and of the members of each council not more than twenty per cent. shall be official members, and at least seventy per cent. shall be elected members:

Provided that—

(a) subject to the maintenance of the above proportions, rules under the principal Act may provide for increasing the number of members of any council, as specified in that schedule; and

(b) the governor may, for the purposes of any Bill introduced or proposed to be introduced in his legislative council, nominate, in the case of Assam one person, and in the case of other provinces not more than two persons, having special knowledge or experience of the subject-matter of the Bill, and those persons shall, in relation to the Bill, have for the period for which they are nominated all the rights of members of the council, and shall be in addition to the numbers above referred to; and

(c) members nominated to the legislative council of the Central Provinces by the governor as the result of elections held in the Assigned Districts of Berar shall be deemed to be elected members of the legislative council of the Central Provinces.

(3) The powers of a governor's legislative council may be exercised notwithstanding any vacancy in the council.

(4) Subject as aforesaid, provision may be made by rules under the principal Act as to—

(a) the term of office of nominated members of governors' legislative councils, and the manner of filling casual vacancies occurring by reason of absence of members from India, inability to attend to duty, death, acceptance of office, resignation duly accepted, or otherwise; and

The governor may also make rules and orders for regulating the relations between his executive council and his ministers for the purpose of the transaction of the business of the local government. A.D. 1919.

Provided that any rules or orders made for the purposes specified in this section which are repugnant to the provisions of any rules made under the principal Act as amended by this Act shall, to the extent of that repugnancy, but not otherwise, be void.

7.—(1) There shall be a legislative council in every governor's province, which shall consist of the members of the executive council and of members nominated or elected as provided by this Act. Composition of governors' legislative councils.

The governor shall not be a member of the legislative council, but shall have the right of addressing the council, and may for that purpose require the attendance of its members.

(2) The number of members of the governors' legislative councils shall be in accordance with the table set out in the First Schedule to this Act; and of the members of each council not more than twenty per cent. shall be official members, and at least seventy per cent. shall be elected members:

Provided that—

(a) subject to the maintenance of the above proportions, rules under the principal Act may provide for increasing the number of members of any council, as specified in that schedule; and

(b) the governor may, for the purposes of any Bill introduced or proposed to be introduced in his legislative council, nominate, in the case of Assam one person, and in the case of other provinces not more than two persons, having special knowledge or experience of the subject-matter of the Bill, and those persons shall, in relation to the Bill, have for the period for which they are nominated all the rights of members of the council, and shall be in addition to the numbers above referred to; and

(c) members nominated to the legislative council of the Central Provinces by the governor as the result of elections held in the Assigned Districts of Berar shall be deemed to be elected members of the legislative council of the Central Provinces.

(3) The powers of a governor's legislative council may be exercised notwithstanding any vacancy in the council.

(4) Subject as aforesaid, provision may be made by rules under the principal Act as to—

(a) the term of office of nominated members of governors' legislative councils, and the manner of filling casual vacancies occurring by reason of absence of members from India, inability to attend to duty, death, acceptance of office, resignation duly accepted, or otherwise; and

A.D. 1949.

- (b) the conditions under which and manner in which persons may be nominated as members of governor's legislative council; and
- (c) the qualification of election, the constitution of electoral colleges, and the method of election for governor's legislative councils, including the number of members to be elected by communal and other electorates, and any matter incidental or ancillary thereto; and
- (d) the qualification for being and for being nominated or elected a member of any such council; and
- (e) the final decision of doubts or disputes as to the validity of any election; and
- (f) the manner in which the rules are to be carried into effect.

Provided that rules as to any such matters as aforesaid may provide for delegation to the local government and no such law may be specified in the rule of making subsuming legislation affecting the same matters.

(5) Subject to any such rules, any person who is a citizen of any State in India may be nominated as a member of a governor's legislative council.

Sessions and duration of governors' legislative councils.

8. (1) Every governor's legislative council shall continue for three years from its first meeting:

Provided that

- (a) the council may be sooner dissolved by the governor; and
- (b) the said period may be extended by the governor for a period not exceeding one year, by notification in the official gazette of the province, if in special circumstances (to be specified in the notification) he so thinks fit; and
- (c) after the dissolution of the council the governor shall appoint a date not more than six months or, with the sanction of the Secretary of State, not more than nine months from the date of dissolution for the next session of the council.

(2) A governor may appoint such times and places for holding the sessions of his legislative council as he thinks fit, and may also, by notification or otherwise, prorogue the council.

(3) Any meeting of a governor's legislative council may be adjourned by the person presiding.

(4) All questions in a governor's legislative council shall be determined by a majority of votes of the members present other than the person presiding, who shall, however, have and exercise a casting vote in the case of an equality of votes.

Presidents of governors' legislative councils.

9. (1) There shall be a president of a governor's legislative council, who shall, until the expiration of a period of four years from the first meeting of the council as constituted under this Act, be a person appointed by the governor, and shall thereafter be a member of the council elected by the council and approved by the governor:

- (g) the conditions under which and manner in which persons may be nominated as members of council; and
- (c) the qualification of electors, the constitution of electoral colleges, and the method of election for electors; and
- (b) the qualification, but being not restricted to electors, of a number of members of council; and
- (i) the manner in which the tribes are to be ascertained, and provided that tribes as to any such matters as officers and members for delegation to the local government are ascertained by the same method;
- (ii) Subject to any such conditions as may be imposed in respect of any State in India may be nominated as a member of a legislative council.

8. (1) Every government legislative council shall continue for three years from its first meeting.

Provided that

(a) the council may be sooner dissolved by the government; and

(b) the said period may be extended by the government; and

and extending one year, by notification in the official gazette of the province, if in special circumstances the be specified in the notification he so think fit; and

(c) after the dissolution of the council the government shall appoint a date not more than six months, or, with the sanction of the Secretary of State, not more than nine months from the date of dissolution for the next session of the council.

(2) A government may appoint such times and places for holding the sessions of his legislative council as he thinks fit, and may adjourn by notification or otherwise, prorogue the council.

(3) Any meeting of a government legislative council may be adjourned by the person presiding.

(4) All questions in a government legislative council shall be determined by a majority of votes of the members present other than the person presiding, who shall, however, have and exercise a casting vote in the case of an equality of votes.

9. (1) There shall be a president of a government legislative council, who shall, until the expiration of a period of four years from the first meeting of the council be constituted under this Act, be a person appointed by the government, and shall thereafter be a member of the council elected by the council and approved by the government;

1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 26

...the ...

Provided that, if at the expiration of such period of four years the council is in session, the president then in office shall continue in office until the end of the current session, and the first election of a president shall take place at the commencement of the next ensuing session. A.D.1919.

(2) There shall be a deputy-president of a governor's legislative council who shall preside at meetings of the council in the absence of the president, and who shall be a member of the council elected by the council and approved by the governor.

(3) The appointed president of a council shall hold office until the date of the first election of a president by the council under this section, but he may resign office by writing under his hand addressed to the governor, or may be removed from office by order of the governor, and any vacancy occurring before the expiration of the term of office of an appointed president shall be filled by a similar appointment for the remainder of such term.

(4) An elected president and a deputy-president shall cease to hold office on ceasing to be members of the council. They may resign office by writing under their hands addressed to the governor, and may be removed from office by a vote of the council with the concurrence of the governor.

(5) The president and the deputy-president shall receive such salaries as may be determined, in the case of an appointed president, by the governor, and in the case of an elected president or deputy-president, by Act of the local legislature.

10.—(1) The local legislature of any province has power, subject to the provisions of this Act, to make laws for the peace and good government of the territories for the time being constituting that province. Powers of local legislatures.

(2) The local legislature of any province may, subject to the provisions of the subsection next following, repeal or alter as to that province any law made either before or after the commencement of this Act by any authority in British India other than that local legislature.

(3) The local legislature of any province may not, without the previous sanction of the Governor-General, make or take into consideration any law—

(a) imposing or authorising the imposition of any new tax unless the tax is a tax scheduled as exempted from this provision by rules made under the principal Act ; or

(b) affecting the public debt of India, or the customs duties, or any other tax or duty for the time being in force and imposed by the authority of the Governor-General in Council for the general purposes of the government of India, provided that the imposition or alteration of a tax scheduled as aforesaid shall not be deemed to affect any such tax or duty ; or

The first of these is the fact that the majority of the specimens of the new species are from the same locality, and that they are all of the same size and shape. This is a very unusual occurrence, and it is therefore probable that the new species is a new subspecies of the common species. The second fact is that the new species is found in the same locality as the common species, and that it is found in the same habitat. This is also a very unusual occurrence, and it is therefore probable that the new species is a new subspecies of the common species. The third fact is that the new species is found in the same locality as the common species, and that it is found in the same habitat. This is also a very unusual occurrence, and it is therefore probable that the new species is a new subspecies of the common species.

The new species is found in the same locality as the common species, and it is found in the same habitat. This is a very unusual occurrence, and it is therefore probable that the new species is a new subspecies of the common species. The new species is found in the same locality as the common species, and it is found in the same habitat. This is a very unusual occurrence, and it is therefore probable that the new species is a new subspecies of the common species. The new species is found in the same locality as the common species, and it is found in the same habitat. This is a very unusual occurrence, and it is therefore probable that the new species is a new subspecies of the common species.

Provided that, if at the expiration of such period of four years the council is in session, the president then in office shall continue in office until the end of the current session, and the first election of a president shall take place at the commencement of the next ensuing session. A.D.1919.

(2) There shall be a deputy-president of a governor's legislative council who shall preside at meetings of the council in the absence of the president, and who shall be a member of the council elected by the council and approved by the governor.

(3) The appointed president of a council shall hold office until the date of the first election of a president by the council under this section, but he may resign office by writing under his hand addressed to the governor, or may be removed from office by order of the governor, and any vacancy occurring before the expiration of the term of office of an appointed president shall be filled by a similar appointment for the remainder of such term.

(4) An elected president and a deputy-president shall cease to hold office on ceasing to be members of the council. They may resign office by writing under their hands addressed to the governor, and may be removed from office by a vote of the council with the concurrence of the governor.

(5) The president and the deputy-president shall receive such salaries as may be determined, in the case of an appointed president, by the governor, and in the case of an elected president or deputy-president, by Act of the local legislature.

10.—(1) The local legislature of any province has power, subject to the provisions of this Act, to make laws for the peace and good government of the territories for the time being constituting that province. Powers
of local
legisla-
tures.

(2) The local legislature of any province may, subject to the provisions of the subsection next following, repeal or alter as to that province any law made either before or after the commencement of this Act by any authority in British India other than that local legislature.

(3) The local legislature of any province may not, without the previous sanction of the Governor-General, make or take into consideration any law—

(a) imposing or authorising the imposition of any new tax unless the tax is a tax scheduled as exempted from this provision by rules made under the principal Act ; or

(b) affecting the public debt of India, or the customs duties, or any other tax or duty for the time being in force and imposed by the authority of the Governor-General in Council for the general purposes of the government of India, provided that the imposition or alteration of a tax scheduled as aforesaid shall not be deemed to affect any such tax or duty ; or

- (e) affecting the discipline or maintenance of any part of the Majesty's naval, military, or air forces; or
- (f) affecting the relations of the Government with foreign powers or states; or
- (g) regulating any central subject, or
- (f) regulating any provincial subject which has been declared by rules under the principal Act to be of a nature in which or in part subject to legislation by the Indian Legislature; or in part subject to legislation by the Indian Legislature; or in respect of any matter to which sub-delegation applies; or
- (g) affecting any power expressly reserved to the Government General in Council by any law for the time being in force; or
- (h) affecting or repealing the provisions of any law which, having been made before the commencement of this Act by any authority in British India other than that local legislative authority in British India under the principal Act to be a law which cannot be repealed or altered by the local legislature without previous sanction; or
- (i) affecting or repealing any provision of an Act of the Indian Legislature made after the commencement of this Act, which by the provision of that Act may not be repealed or altered by the local legislature without previous sanction.

Provided that an Act or a provision of an Act made by a local legislature, and subsequently assented to by the Government General in pursuance of this Act, shall not be deemed to be repealed or altered by the requiring the previous sanction of the Government General under this Act.

(1) The local Legislature of any province has not power to make any law affecting any Act of Parliament.

11. (1) Subsections (1) and (2) of section eighty of the principal Act (which relate to the classes of business which may be transacted at meetings of local legislative councils) shall cease to apply to a Governor's legislative council, but the business and procedure in any such council shall be regulated in accordance with the provisions of this section.

(2) The estimated annual expenditure and revenue of the province shall be laid in the form of a statement before the council in each year, and the proposals of the local Government for the appropriation of provincial revenues and other moneys in any year shall be submitted to the vote of the council in the form of demands for grants. The council may assent, or refuse its assent, to a demand, or may reduce the amount therein referred to either by a reduction of the whole grant or by the omission or reduction of any of the items of expenditure of which the grant is composed :

A.D. 1919.

- (c) affecting the discipline or maintenance of any part of His Majesty's naval, military, or air force; or
- (d) affecting the relations of the government with foreign princes or states; or
- (e) regulating any central subject; or
- (f) regulating any provincial subject which has been declared by rules under the principal Act to be, either in whole or in part, subject to legislation by the Indian Legislature, in respect of any matter to which such declaration applies; or
- (g) affecting any power expressly reserved to the Governor-General in Council by any law for the time being in force; or
- (h) altering or repealing the provisions of any law which, having been made before the commencement of this Act by any authority in British India other than that local legislature, is declared by rules under the principal Act to be a law which cannot be repealed or altered by the local legislature without previous sanction; or
- (i) altering or repealing any provision of an Act of the Indian Legislature made after the commencement of this Act, which by the provisions of that Act may not be repealed or altered by the local legislature without previous sanction;

Provided that an Act or a provision of an Act made by a local legislature, and subsequently assented to by the Governor-General in pursuance of this Act, shall not be deemed invalid by reason only of its requiring the previous sanction of the Governor-General under this Act.

(4) The local legislature of any province has not power to make any law affecting any Act of Parliament.

Business and procedure in governors' legislative councils.

11. (1) Subsections (1) and (3) of section eighty of the principal Act (which relate to the classes of business which may be transacted at meetings of local legislative councils) shall cease to apply to a governor's legislative council, but the business and procedure in any such council shall be regulated in accordance with the provisions of this section.

(2) The estimated annual expenditure and revenue of the province shall be laid in the form of a statement before the council in each year, and the proposals of the local government for the appropriation of provincial revenues and other moneys in any year shall be submitted to the vote of the council in the form of demands for grants. The council may assent, or refuse its assent, to a demand, or may reduce the amount therein referred to either by a reduction of the whole grant or by the omission or reduction of any of the items of expenditure of which the grant is composed:

Provided that—

A.D. 1919

- (a) the local government shall have power, in relation to any such demand, to act as if it had been assented to, notwithstanding the withholding of such assent or the reduction of the amount therein referred to, if the demand relates to a reserved subject, and the governor certifies that the expenditure provided for by the demand is essential to the discharge of his responsibility for the subject; and
 - (b) the governor shall have power in cases of emergency to authorise such expenditure as may be in his opinion necessary for the safety or tranquillity of the province, or for the carrying on of any department; and
 - (c) no proposal for the appropriation of any such revenues or other moneys for any purpose shall be made except on the recommendation of the governor, communicated to the council.
- (3) Nothing in the foregoing subsection shall require proposals to be submitted to the council relating to the following heads of expenditure:
- (i) contributions payable by the local government to the Governor-General in Council; and
 - (ii) interest and sinking fund charges on loans; and
 - (iii) expenditure of which the amount is prescribed by or under any law; and
 - (iv) salaries and pensions of persons appointed by or with the approval of His Majesty or by the Secretary of State in Council; and
 - (v) salaries of judges of the high court of the province and of the advocate-general.

If any question arises whether any proposed appropriation of moneys does or does not relate to the above heads of expenditure, the decision of the governor shall be final.

(4) Where any Bill has been introduced or is proposed to be introduced, or any amendment to a Bill is moved or proposed to be moved, the governor may certify that the Bill or any clause of it or the amendment affects the safety or tranquillity of his province or any part of it or of another province, and may direct that no proceedings or no further proceedings shall be taken by the council in relation to the Bill, clause or amendment, and effect shall be given to any such direction.

(5) Provision may be made by rules under the principal Act for the purpose of carrying into effect the foregoing provisions of this section and for regulating the course of business in the council, and as to the persons to preside over meetings thereof in the absence of the president and deputy-president, and the preservation of order at meetings; and the rules may provide for the number of members required to constitute a quorum, and for prohibiting or regulating

Provided that—

A.D. 1919

- (a) the local government shall have power, in relation to any such demand, to act as if it had been assented to, notwithstanding the withholding of such assent or the reduction of the amount therein referred to, if the demand relates to a reserved subject, and the governor certifies that the expenditure provided for by the demand is essential to the discharge of his responsibility for the subject; and
 - (b) the governor shall have power in cases of emergency to authorise such expenditure as may be in his opinion necessary for the safety or tranquillity of the province, or for the carrying on of any department; and
 - (c) no proposal for the appropriation of any such revenues or other moneys for any purpose shall be made except on the recommendation of the governor, communicated to the council.
- (3) Nothing in the foregoing subsection shall require proposals to be submitted to the council relating to the following heads of expenditure:
- (i) contributions payable by the local government to the Governor-General in Council; and
 - (ii) interest and sinking fund charges on loans; and
 - (iii) expenditure of which the amount is prescribed by or under any law; and
 - (iv) salaries and pensions of persons appointed by or with the approval of His Majesty or by the Secretary of State in Council; and
 - (v) salaries of judges of the high court of the province and of the advocate-general.

If any question arises whether any proposed appropriation of moneys does or does not relate to the above heads of expenditure, the decision of the governor shall be final.

(4) Where any Bill has been introduced or is proposed to be introduced, or any amendment to a Bill is moved or proposed to be moved, the governor may certify that the Bill or any clause of it or the amendment affects the safety or tranquillity of his province or any part of it or of another province, and may direct that no proceedings or no further proceedings shall be taken by the council in relation to the Bill, clause or amendment, and effect shall be given to any such direction.

(5) Provision may be made by rules under the principal Act for the purpose of carrying into effect the foregoing provisions of this section and for regulating the course of business in the council, and as to the persons to preside over meetings thereof in the absence of the president and deputy-president, and the preservation of order at meetings; and the rules may provide for the number of members required to constitute a quorum, and for prohibiting or regulating

Copyright, 1918, by American Medical Association

Published by the American Medical Association, 535 North Dearborn Street, Chicago, Ill. The Association was organized at the Chicago Medical Convention, 1847, and has since that time been the leading organization of the medical profession in the United States. Its purpose is to advance the science and art of medicine, to promote the health of the people, and to protect the public interest. It does this by publishing this journal, by holding annual conventions, and by other means.

The Journal of the American Medical Association is a weekly publication of the American Medical Association. It contains articles on the latest developments in medicine, surgery, and the allied sciences. It also contains reports on the activities of the Association and on the work of its various departments. The Journal is a valuable source of information for the medical profession and for the general public.

A.D. 1919. the asking of questions on and the discussion of any subject specified in the rules.

(6) Standing orders may be made providing for the conduct of business and the procedure to be followed in the council, in so far as these matters are not provided for by rules made under the principal Act. The first standing orders shall be made by the governor in council, but may, subject to the assent of the governor, be altered by the local legislatures. Any standing order made as aforesaid which is repugnant to the provisions of any rules made under the principal Act, shall, to the extent of that repugnancy but not otherwise, be void.

(7) Subject to the rules and standing orders affecting the council, there shall be freedom of speech in the governors' legislative councils. No person shall be liable to any proceedings in any court by reason of his speech or vote in any such council, or by reason of anything contained in any official report of the proceedings of any such council.

Return
and reser-
vation
of Bills.

12.—(1) Where a Bill has been passed by a local legislative council, the governor, lieutenant-governor or chief commissioner may, instead of declaring that he assents to or withholds his assent from the Bill, return the Bill to the council for reconsideration, either in whole or in part, together with any amendments which he may recommend, or, in cases prescribed by rules under the principal Act may, and if the rules so require shall, reserve the Bill for the consideration of the Governor-General.

(2) Where a Bill is reserved for the consideration of the Governor-General, the following provisions shall apply :

(a) The governor, lieutenant-governor or chief commissioner may, at any time within six months from the date of the reservation of the Bill, with the consent of the Governor-General, return the Bill for further consideration by the council with a recommendation that the council shall consider amendments thereto :

(b) After any Bill so returned has been further considered by the council, together with any recommendations made by the governor, lieutenant-governor or chief commissioner relating thereto, the Bill, if re-affirmed with or without amendment, may be again presented to the governor, lieutenant-governor, or chief commissioner :

(c) Any Bill reserved for the consideration of the Governor-General shall, if assented to by the Governor-General within a period of six months from the date of such reservation, become law on due publication of such assent, in the same way as a Bill assented to by the governor, lieutenant-governor or chief commissioner, but, if not assented to by the Governor-General within

A.D. 1919. the asking of questions on and the discussion of any subject specified in the rules.

(6) Standing orders may be made providing for the conduct of business and the procedure to be followed in the council, in so far as these matters are not provided for by rules made under the principal Act. The first standing orders shall be made by the governor in council, but may, subject to the assent of the governor, be altered by the local legislatures. Any standing order made as aforesaid which is repugnant to the provisions of any rules made under the principal Act, shall, to the extent of that repugnancy but not otherwise, be void.

(7) Subject to the rules and standing orders affecting the council, there shall be freedom of speech in the governors' legislative councils. No person shall be liable to any proceedings in any court by reason of his speech or vote in any such council, or by reason of anything contained in any official report of the proceedings of any such council.

Return
and reser-
vation
of Bills.

12.—(1) Where a Bill has been passed by a local legislative council, the governor, lieutenant-governor or chief commissioner may, instead of declaring that he assents to or withholds his assent from the Bill, return the Bill to the council for reconsideration, either in whole or in part, together with any amendments which he may recommend, or, in cases prescribed by rules under the principal Act may, and if the rules so require shall, reserve the Bill for the consideration of the Governor-General.

(2) Where a Bill is reserved for the consideration of the Governor-General, the following provisions shall apply :

- (a) The governor, lieutenant-governor or chief commissioner may, at any time within six months from the date of the reservation of the Bill, with the consent of the Governor-General, return the Bill for further consideration by the council with a recommendation that the council shall consider amendments thereto :
- (b) After any Bill so returned has been further considered by the council, together with any recommendations made by the governor, lieutenant-governor or chief commissioner relating thereto, the Bill, if re-affirmed with or without amendment, may be again presented to the governor, lieutenant-governor, or chief commissioner :
- (c) Any Bill reserved for the consideration of the Governor-General shall, if assented to by the Governor-General within a period of six months from the date of such reservation, become law on due publication of such assent, in the same way as a Bill assented to by the governor, lieutenant-governor or chief commissioner, but, if not assented to by the Governor-General within

such period of six months, shall lapse and be of no effect unless before the expiration of that period either—

(i) the Bill has been returned by the governor, lieutenant-governor or chief commissioner, for further consideration by the council ; or

(ii) in the case of the council not being in session, a notification has been published of an intention so to return the Bill at the commencement of the next session.

(3) The Governor-General may (except where the Bill has been reserved for his consideration), instead of assenting to or withholding his assent from any Act passed by a local legislature, declare that he reserves the Act for the signification of His Majesty's pleasure thereon, and in such case the Act shall not have validity until His Majesty in Council has signified his assent and his assent has been notified by the Governor-General.

13.—(1) Where a governor's legislative council has refused leave to introduce, or has failed to pass in a form recommended by the governor, any Bill relating to a reserved subject, the governor may certify that the passage of the Bill is essential for the discharge of his responsibility for the subject, and thereupon the Bill shall, notwithstanding that the council have not consented thereto, be deemed to have passed, and shall, on signature by the governor, become an Act of the local legislature in the form of the Bill as originally introduced or proposed to be introduced in the council or (as the case may be) in the form recommended to the council by the governor.

Provision for case of failure to pass legislation in governors' legislative councils.

(2) Every such Act shall be expressed to be made by the governor, and the governor shall forthwith send an authentic copy thereof to the Governor-General, who shall reserve the Act for the signification of His Majesty's pleasure, and upon the signification of such assent by His Majesty in Council, and the notification thereof by the Governor-General, the Act shall have the same force and effect as an Act passed by the local legislature and duly assented to :

Provided that, where in the opinion of the Governor-General a state of emergency exists which justifies such action, he may, instead of reserving such Act, signify his assent thereto, and thereupon the Act shall have such force and effect as aforesaid, subject, however, to disallowance by His Majesty in Council.

(3) An Act made under this section shall, as soon as practicable after being made, be laid before each House of Parliament, and an Act which is required to be presented for His Majesty's assent shall not be so presented until copies thereof have been laid before each House of Parliament for not less than eight days on which that House has sat.

14. An official shall not be qualified for election as a member of a local legislative council, and, if any non-official member of a local legislative council, whether elected or nominated, accepts any

Vacation of seats in local

such period of six months, shall lapse and be of no effect unless before the expiration of that period either—

(i) the Bill has been returned by the governor, lieutenant-governor or chief commissioner, for further consideration by the council ; or

(ii) in the case of the council not being in session, a notification has been published of an intention so to return the Bill at the commencement of the next session.

(3) The Governor-General may (except where the Bill has been reserved for his consideration), instead of assenting to or withholding his assent from any Act passed by a local legislature, declare that he reserves the Act for the signification of His Majesty's pleasure thereon, and in such case the Act shall not have validity until His Majesty in Council has signified his assent and his assent has been notified by the Governor-General.

13.—(1) Where a governor's legislative council has refused leave to introduce, or has failed to pass in a form recommended by the governor, any Bill relating to a reserved subject, the governor may certify that the passage of the Bill is essential for the discharge of his responsibility for the subject, and thereupon the Bill shall, notwithstanding that the council have not consented thereto, be deemed to have passed, and shall, on signature by the governor, become an Act of the local legislature in the form of the Bill as originally introduced or proposed to be introduced in the council or (as the case may be) in the form recommended to the council by the governor.

Provision
for case of
failure to
pass legis-
lation in
governors'
legislative
councils.

(2) Every such Act shall be expressed to be made by the governor, and the governor shall forthwith send an authentic copy thereof to the Governor-General, who shall reserve the Act for the signification of His Majesty's pleasure, and upon the signification of such assent by His Majesty in Council, and the notification thereof by the Governor-General, the Act shall have the same force and effect as an Act passed by the local legislature and duly assented to :

Provided that, where in the opinion of the Governor-General a state of emergency exists which justifies such action, he may, instead of reserving such Act, signify his assent thereto, and thereupon the Act shall have such force and effect as aforesaid, subject, however, to disallowance by His Majesty in Council.

(3) An Act made under this section shall, as soon as practicable after being made, be laid before each House of Parliament, and an Act which is required to be presented for His Majesty's assent shall not be so presented until copies thereof have been laid before each House of Parliament for not less than eight days on which that House has sat.

14. An official shall not be qualified for election as a member of a local legislative council, and, if any non-official member of a local legislative council, whether elected or nominated, accepts any

Vacation
of seats
in local

A.D. 1919. office in the service of the Crown in India, his seat on the Council shall become vacant :

legislative councils. Provided that for the purposes of this provision a minister shall not be deemed to be an official and a person shall not be deemed to accept office on appointment as a minister.

Constitution of new provinces, &c., and provision as to backward tracts. 15. (1) The Governor General in Council may, after obtaining an expression of opinion from the local government and the local legislature affected, by notification, with the sanction of His Majesty, previously signified by the Secretary of State in Council, constitute a new governor's province, or place part of a governor's province under the administration of a deputy governor to be appointed by the Governor General, and may in any such case apply, with such modifications as appear necessary or desirable, all or any of the provisions of the principal Act or this Act relating to governors' provinces, or provinces under a lieutenant governor or chief commissioner, to any such new province or part of a province.

(2) The Governor General in Council may declare any territory in British India to be a "backward tract," and may, by notification, with such sanction as aforesaid, direct that the principal Act and this Act shall apply to that territory subject to such exceptions and modifications as may be prescribed in the notification. Where the Governor General in Council has, by notification, directed as aforesaid, he may, by the same or subsequent notification, direct that any Act of the Indian Legislature shall not apply to the territory in question or any part thereof, or shall apply to the territory or any part thereof subject to such exceptions or modifications as the Governor General thinks fit, or may authorise the governor in Council to give similar directions as respects any Act of the local legislature.

Saving.

16. (1) The validity of any order made or action taken after the commencement of this Act by the Governor General in Council or by a local government which would have been within the powers of the Governor General in Council or of such local government if this Act had not been passed, shall not be open to question in any legal proceedings on the ground that by reason of any provision of this Act or of any rule made by virtue of any such provision such order or action has ceased to be within the powers of the Governor General in Council or of the government concerned.

(2) Nothing in this Act, or in any rule made thereunder, shall be construed as diminishing in any respect the powers of the Indian legislature as laid down in section sixty five of the principal Act, and the validity of any Act of the Indian legislature or any local legislature shall not be open to question in any legal proceedings on the ground that the Act affects a provincial subject or a central subject, as the case may be, and the validity of any Act made by the governor of a province shall not be so open to question on the ground that it does not relate to a reserved subject.

(3) The validity of any order made or action taken by a governor

A.D. 1919, office in the service of the Crown in India, has set on the record that

legislative. Provided that for the purpose of this provision a person shall

not be deemed to be an official and a person shall not be deemed to

accept office on appointment as a minister.

15. (1) The Governor General in Council may, after obtaining an expression of opinion from the local government and the local legislature affected, by notification, with the sanction of His Majesty, previously assigned by the Secretary of State in Council, constitute a new government, or place part of a government, or appoint the Governor General, and may, in any such case apply, with such modifications as appear necessary or desirable, all or any of the provisions of the principal Act or this Act relating to government, provinces, or provinces under a lieutenant governor or chief commissioner, to any such new province or part of a province.

(2) The Governor General in Council may declare any territory in British India to be a "backward tract," and may, by notification, with such sanction as aforesaid, direct that the principal Act and this Act shall apply to that territory subject to such exceptions and modifications as may be prescribed in the notification. Where the Governor General in Council has, by notification, directed as aforesaid, he may, by the same or subsequent notification, direct that any Act of the Indian Legislature shall not apply to the territory or in question or any part thereof, or shall apply to the territory or any part thereof subject to such exceptions or modifications as the Governor General thinks fit, or may withdraw the government in Council to give similar directions as respects any Act of the local legislature.

16. (1) The validity of any order made or action taken after the commencement of this Act by the Governor General in Council or by a local government which would have been within the powers of the Governor General in Council or of such local government if this Act had not been passed, shall not be open to question in any legal proceedings on the ground that by reason of any provision of this Act or of any rule made by virtue of any such provision such order or action has ceased to be within the powers of the Governor General in Council or of the government concerned.

(2) Nothing in this Act, or in any rule made thereunder, shall be construed as diminishing in any respect the powers of the Indian Legislature as laid down in section six of the principal Act, and the validity of any Act of the Indian Legislature or any local Legislature shall not be open to question in any legal proceedings on the ground that the Act affects a provincial subject or a central subject, as the case may be, and the validity of any Act made by the Governor of a province shall not be open to question on the ground that it does not relate to a reserved subject.

(3) The validity of any order made or action taken by a Governor

(Constitu-
tion of

backward
tracts.

Saving.

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.001	0.000	1.2	0.23
Gender of the head of household (Male = 1, Female = 0)	-0.05	0.02	-2.5	0.01
Constant	1.5	0.1	15.0	0.00

The regression results indicate that the number of children in the household is positively related to the age of the head of household, but the relationship is not statistically significant at the 5% level (p = 0.23). However, the gender of the head of household is a significant determinant, with male heads of household having a higher number of children in the household (p = 0.01).

in council, or by a governor acting with his ministers, shall not be open to question in any legal proceedings on the ground that such order or action relates or does not relate to a transferred subject, or relates to a transferred subject of which the minister is not in charge.

A.D. 1919.

PART II.

GOVERNMENT OF INDIA.

17. Subject to the provisions of this Act, the Indian legislature shall consist of the Governor-General and two chambers, namely, the Council of State and the Legislative Assembly.

Indian legislature.

Except as otherwise provided by or under this Act, a Bill shall not be deemed to have been passed by the Indian legislature unless it has been agreed to by both chambers, either without amendment or with such amendments only as may be agreed to by both chambers.

18. (1) The Council of State shall consist of not more than sixty members nominated or elected in accordance with rules made under the principal Act, of whom not more than twenty shall be official members.

Council of State.

(2) The Governor-General shall have power to appoint, from among the members of the Council of State, a president and other persons to preside in such circumstances as he may direct.

(3) The Governor-General shall have the right of addressing the Council of State, and may for that purpose require the attendance of its members.

19. (1) The Legislative Assembly shall consist of members nominated or elected in accordance with rules made under the principal Act.

Legislative Assembly.

(2) The total number of members of the Legislative Assembly shall be one hundred and forty. The number of non-elected members shall be forty, of whom twenty-six shall be official members. The number of elected members shall be one hundred :

Provided that rules made under the principal Act may provide for increasing the number of members of the Legislative Assembly as fixed by this section, and may vary the proportion which the classes of members bear one to another, so, however, that at least five-sixths of the members of the Legislative Assembly shall be elected members, and at least one-third of the other members shall be non-official members.

(3) The Governor-General shall have the right of addressing the Legislative Assembly, and may for that purpose require the attendance of its members.

20. (1) There shall be a president of the Legislative Assembly, who shall, until the expiration of four years from the first meeting thereof, be a person appointed by the Governor-General, and shall

President of Legislative Assembly.

in council, or by a governor acting with his ministers, shall not be open to question in any legal proceedings on the ground that such order or action relates or does not relate to a transferred subject, or relates to a transferred subject of which the minister is not in charge.

A.D. 1919.

PART II.

GOVERNMENT OF INDIA.

17. Subject to the provisions of this Act, the Indian legislature shall consist of the Governor-General and two chambers, namely, the Council of State and the Legislative Assembly.

Indian legislature.

Except as otherwise provided by or under this Act, a Bill shall not be deemed to have been passed by the Indian legislature unless it has been agreed to by both chambers, either without amendment or with such amendments only as may be agreed to by both chambers.

18. (1) The Council of State shall consist of not more than sixty members nominated or elected in accordance with rules made under the principal Act, of whom not more than twenty shall be official members.

Council of State.

(2) The Governor-General shall have power to appoint, from among the members of the Council of State, a president and other persons to preside in such circumstances as he may direct.

(3) The Governor-General shall have the right of addressing the Council of State, and may for that purpose require the attendance of its members.

19. (1) The Legislative Assembly shall consist of members nominated or elected in accordance with rules made under the principal Act.

Legislative Assembly.

(2) The total number of members of the Legislative Assembly shall be one hundred and forty. The number of non-elected members shall be forty, of whom twenty-six shall be official members. The number of elected members shall be one hundred :

Provided that rules made under the principal Act may provide for increasing the number of members of the Legislative Assembly as fixed by this section, and may vary the proportion which the classes of members bear one to another, so, however, that at least five-sevenths of the members of the Legislative Assembly shall be elected members, and at least one-third of the other members shall be non-official members.

(3) The Governor-General shall have the right of addressing the Legislative Assembly, and may for that purpose require the attendance of its members.

20. (1) There shall be a president of the Legislative Assembly, who shall, until the expiration of four years from the first meeting thereof, be a person appointed by the Governor-General, and shall

President of Legislative Assembly.

THE EFFECT OF THE DIET ON THE BLOOD SUGAR IN THE NORMAL INDIVIDUAL AND IN THE DIABETIC

By J. H. HARRIS, M.D., and J. H. HARRIS, M.D.
From the Department of Medicine, University of Chicago, Chicago, Ill.
The effect of the diet on the blood sugar in the normal individual and in the diabetic has been a subject of interest to physicians for many years. The normal individual is able to maintain a normal blood sugar level by the action of the pancreas, which secretes the hormone insulin. In the diabetic, the pancreas is unable to secrete sufficient insulin to maintain a normal blood sugar level, and the blood sugar rises. The diet plays a very important role in the treatment of the diabetic, and it is important to know the effect of the diet on the blood sugar in the normal individual and in the diabetic.

The normal individual is able to maintain a normal blood sugar level by the action of the pancreas, which secretes the hormone insulin. The diet plays a very important role in the treatment of the diabetic, and it is important to know the effect of the diet on the blood sugar in the normal individual and in the diabetic.

A.D. 1919. thereafter be a member of the Assembly elected by the Assembly and approved by the Governor-General :

Provided that, if at the expiration of such period of four years the Assembly is in session, the president then in office shall continue in office until the end of the current session, and the first election of a president shall take place at the commencement of the ensuing session.

(2) There shall be a deputy-president of the Legislative Assembly, who shall preside at meetings of the Assembly in the absence of the president, and who shall be a member of the Assembly elected by the Assembly and approved by the Governor-General.

(3) The appointed president shall hold office until the date of the election of a president under this section, but he may resign his office by writing under his hand addressed to the Governor-General, or may be removed from office by order of the Governor-General, and any vacancy occurring before the expiration of his term of office shall be filled by a similar appointment for the remainder of such term.

(4) An elected president and a deputy-president shall cease to hold office if they cease to be members of the Assembly. They may resign office by writing under their hands addressed to the Governor-General, and may be removed from office by a vote of the Assembly with the concurrence of the Governor-General.

(5) A president and deputy-president shall receive such salaries as may be determined, in the case of an appointed president by the Governor-General, and in the case of an elected president and a deputy-president by Act of the Indian legislature.

Duration
and ses-
sions of
Legisla-
tive
Assembly
and
Council
of State.

21.—(1) Every Council of State shall continue for five years, and every Legislative Assembly for three years, from its first meeting :
Provided that—

- (a) either chamber of the legislature may be sooner dissolved by the Governor-General ; and
- (b) any such period may be extended by the Governor-General if in special circumstances he so thinks fit ; and
- (c) after the dissolution of either chamber the Governor-General shall appoint a date not more than six months, or, with the sanction of the Secretary of State, not more than nine months after the date of dissolution for the next session of that chamber.

(2) The Governor-General may appoint such times and places for holding the sessions of either chamber of the Indian legislature as he thinks fit, and may also from time to time, by notification or otherwise, prorogue such sessions.

(3) Any meeting of either chamber of the Indian legislature may be adjourned by the person presiding.

(4) All questions in either chamber shall be determined by a majority of votes of members present other than the presiding member,

A.D. 1919. thereafter be a member of the Assembly elected by the Assembly and approved by the Governor-General :

Provided that, if at the expiration of such period of four years the Assembly is in session, the president then in office shall continue in office until the end of the current session, and the first election of a president shall take place at the commencement of the ensuing session.

(2) There shall be a deputy-president of the Legislative Assembly, who shall preside at meetings of the Assembly in the absence of the president, and who shall be a member of the Assembly elected by the Assembly and approved by the Governor-General.

(3) The appointed president shall hold office until the date of the election of a president under this section, but he may resign his office by writing under his hand addressed to the Governor-General, or may be removed from office by order of the Governor-General, and any vacancy occurring before the expiration of his term of office shall be filled by a similar appointment for the remainder of such term.

(4) An elected president and a deputy-president shall cease to hold office if they cease to be members of the Assembly. They may resign office by writing under their hands addressed to the Governor-General, and may be removed from office by a vote of the Assembly with the concurrence of the Governor-General.

(5) A president and deputy-president shall receive such salaries as may be determined, in the case of an appointed president by the Governor-General, and in the case of an elected president and a deputy-president by Act of the Indian legislature.

Duration
and ses-
sions of
Legisla-
tive
Assembly
and
Council
of State.

21.—(1) Every Council of State shall continue for five years, and every Legislative Assembly for three years, from its first meeting :
Provided that—

- (a) either chamber of the legislature may be sooner dissolved by the Governor-General ; and
- (b) any such period may be extended by the Governor-General if in special circumstances he so thinks fit ; and
- (c) after the dissolution of either chamber the Governor-General shall appoint a date not more than six months, or, with the sanction of the Secretary of State, not more than nine months after the date of dissolution for the next session of that chamber.

(2) The Governor-General may appoint such times and places for holding the sessions of either chamber of the Indian legislature as he thinks fit, and may also from time to time, by notification or otherwise, prorogue such sessions.

(3) Any meeting of either chamber of the Indian legislature may be adjourned by the person presiding.

(4) All questions in either chamber shall be determined by a majority of votes of members present other than the presiding member,

who shall, however, have and exercise a casting vote in the case of an equality of votes. A.D.1919.

(c) The powers of either chamber of the Indian legislature may be exercised notwithstanding any vacancy in the chamber.

22. (1) An official shall not be qualified for election as a member of either chamber of the Indian legislature, and, if any non-official member of either chamber accepts office in the service of the Crown in India, his seat in that chamber shall become vacant. Member-ship of both chambers.

(2) If an elected member of either chamber of the Indian legislature becomes a member of the other chamber, his seat in such first-mentioned chamber shall thereupon become vacant.

(3) If any person is elected a member of both chambers of the Indian legislature, he shall, before he takes his seat in either chamber, declare in writing the chamber of which he desires to be a member, and thereupon his seat in the other chamber shall become vacant.

(4) Every member of the Governor-General's Executive Council shall be nominated as a member of one chamber of the Indian legislature, and shall have the right of attending in and addressing the other chamber, but shall not be a member of both chambers.

23. (1) Subject to the provisions of this Act, provision may be made by rules under the principal Act as to -- Supplementary provisions as to composition of Legislative Assembly and Council of State.

(a) the term of office of nominated members of the Council of State and the Legislative Assembly, and the manner of filling casual vacancies occurring by reason of absence of members from India, inability to attend to duty, death, acceptance of office, or resignation duly accepted, or otherwise; and

(b) the conditions under which and the manner in which persons may be nominated as members of the Council of State or the Legislative Assembly; and

(c) the qualification of electors, the constitution of constituencies, and the method of election for the Council of State and the Legislative Assembly (including the number of members to be elected by communal and other electorates) and any matters incidental or ancillary thereto; and

(d) the qualifications for being or for being nominated or elected as members of the Council of State or the Legislative Assembly; and

(e) the final decision of doubts or disputes as to the validity of an election; and

(f) the manner in which the rules are to be carried into effect.

(2) Subject to any such rules, any person who is a ruler or subject of any state in India may be nominated as a member of the Council of State or the Legislative Assembly.

24. (1) Subsections (1) and (3) of section sixty-seven of the principal Act (which relate to the classes of business which may be transacted by the Indian legislative council) shall cease to have effect. Business proceedings in Indian legislature

who shall, however, have and exercise a casting vote in the case A.D.1919.
of an equality of votes.

(c) The powers of either chamber of the Indian legislature may be exercised notwithstanding any vacancy in the chamber.

22. (1) An official shall not be qualified for election as a member of either chamber of the Indian legislature, and, if any non-official member of either chamber accepts office in the service of the Crown in India, his seat in that chamber shall become vacant. Member-ship of both chambers.

(2) If an elected member of either chamber of the Indian legislature becomes a member of the other chamber, his seat in such first-mentioned chamber shall thereupon become vacant.

(3) If any person is elected a member of both chambers of the Indian legislature, he shall, before he takes his seat in either chamber, declare in writing the chamber of which he desires to be a member, and thereupon his seat in the other chamber shall become vacant.

(4) Every member of the Governor-General's Executive Council shall be nominated as a member of one chamber of the Indian legislature, and shall have the right of attending in and addressing the other chamber, but shall not be a member of both chambers.

23. (1) Subject to the provisions of this Act, provision may be made by rules under the principal Act as to -- Supplementary provisions as to composition of Legislative Assembly and Council of State.

(a) the term of office of nominated members of the Council of State and the Legislative Assembly, and the manner of filling casual vacancies occurring by reason of absence of members from India, inability to attend to duty, death, acceptance of office, or resignation duly accepted, or otherwise; and

(b) the conditions under which and the manner in which persons may be nominated as members of the Council of State or the Legislative Assembly; and

(c) the qualification of electors, the constitution of constituencies, and the method of election for the Council of State and the Legislative Assembly (including the number of members to be elected by communal and other electorates) and any matters incidental or ancillary thereto; and

(d) the qualifications for being or for being nominated or elected as members of the Council of State or the Legislative Assembly; and

(e) the final decision of doubts or disputes as to the validity of an election; and

(f) the manner in which the rules are to be carried into effect.

(2) Subject to any such rules, any person who is a ruler or subject of any state in India may be nominated as a member of the Council of State or the Legislative Assembly.

24. (1) Subsections (1) and (3) of section sixty-seven of the principal Act (which relate to the classes of business which may be transacted by the Indian legislative council) shall cease to have effect. Business proceedings in Indian legislature

(2) Provision may be made by rules under the principal Act for regulating the conduct of business and the procedure of either the chamber of the Indian Legislature and as to the manner of presiding at the meetings of the Legislature separately or the meetings of the president and the deputy-president, and the rules may provide for the number of members required to constitute a quorum, and for prohibiting or regulating the taking of opinions, and the discussion of, any subject specified in the rules.

(3) If any Bill which has been passed by one chamber of the Legislature is made after the passage of the Bill by that chamber, within six months after the passage of the Bill by that chamber, and is passed by the other chamber either without amendment or with such amendments as may be agreed to by the two chambers, the Governor-General may in his discretion refer the matter for discussion to a joint sitting of both chambers. Provided that standing orders made under this section may provide for matters of procedure of both chambers appointed for the purpose in order to obviate any difference of opinion which has arisen between the two chambers.

(4) Without prejudice to the powers of the Governor-General under section fifty-eight of the principal Act, the Governor-General may, where a Bill has been passed by both chambers of the Indian Legislature, return the Bill for reconsideration by either chamber.

(5) Rules made for the purpose of this section may contain such general and supplemental provisions as appear necessary for the purpose of giving full effect to this section.

(6) Standing orders may be made providing for the conduct of business and the procedure to be followed in either chamber of the Indian Legislature in so far as these matters are not provided for by rules made under the principal Act. The first standing orders shall be made by the Governor-General in Council, but may, with the consent of the Governor-General, be altered by the chamber to which they relate.

Any standing order made as aforesaid which is repugnant to the provisions of any rules made under the principal Act shall, to the extent of that repugnance, but not otherwise, be void.

(7) Subject to the rules and standing orders affecting the chamber, there shall be freedom of speech in both chambers of the Indian Legislature. No person shall be liable to any proceedings in any court by reason of his speech or vote in either chamber, or by reason of anything contained in any official report of the proceedings of either chamber.

25. (1) The estimated annual expenditure and revenue of the Governor-General in Council shall be laid in the form of a statement before both chambers of the Indian Legislature in each year.

(2) No proposal for the appropriation of any revenue or moneys for any purpose shall be made except on the recommendation of the Governor-General.

D. 1919. (2) Provision may be made by rules under the principal Act for regulating the conduct of business and the presentation of orders in the chambers of the Indian legislature, and as to the powers to provide at the meetings of the legislature assembled in the absence of the president and the deputy-president; and the rules may provide for the number of members required to constitute a quorum, and for prohibiting or regulating the asking of questions, and the discussion of, any subject specified in the rules.

(3) If any Bill which has been passed by one chamber of the Indian legislature, within six months after the passage of the Bill by that chamber, passed by the other chamber either without amendment, or with such amendments as may be agreed to by the two chambers, the Governor-General may in his discretion refer the matter for decision to a joint sitting of both chambers: Provided that standing orders made under this section may provide for meetings of members of both chambers appointed for the purpose, in order to discuss any difference of opinion which has arisen between the two chambers.

(4) Without prejudice to the powers of the Governor-General under section sixty-eight of the principal Act, the Governor-General may, where a Bill has been passed by both chambers of the Indian legislature, return the Bill for reconsideration by either chamber.

(5) Rules made for the purpose of this section may contain such general and supplemental provisions as appear necessary for the purpose of giving full effect to this section.

(6) Standing orders may be made providing for the conduct of business and the procedure to be followed in either chamber of the Indian legislature in so far as these matters are not provided for by rules made under the principal Act. The first standing orders shall be made by the Governor-General in Council, but may, with the consent of the Governor-General, be altered by the chamber to which they relate.

Any standing order made as aforesaid which is repugnant to the provisions of any rules made under the principal Act shall, to the extent of that repugnancy but not otherwise, be void.

(7) Subject to the rules and standing orders affecting the chamber, there shall be freedom of speech in both chambers of the Indian legislature. No person shall be liable to any proceedings in any court by reason of his speech or vote in either chamber, or by reason of anything contained in any official report of the proceedings of either chamber.

Indian
Budget.

25. (1) The estimated annual expenditure and revenue of the Governor-General in Council shall be laid in the form of a statement before both chambers of the Indian legislature in each year.

(2) No proposal for the appropriation of any revenue or moneys for any purpose shall be made except on the recommendation of the Governor-General.

(3) The proposals of the Governor-General in Council for the appropriation of revenue or moneys relating to the following heads of expenditure shall not be submitted to the vote of the legislative assembly, nor shall they be open to discussion by either chamber at the time when the annual statement is under consideration, unless the Governor-General otherwise directs—

- (i) interest and sinking fund charges on loans ; and
- (ii) expenditure of which the amount is prescribed by or under any law ; and
- (iii) salaries and pensions of persons appointed by or with the approval of His Majesty or by the Secretary of State in Council ; and
- (iv) salaries of chief commissioners and judicial commissioners ; and
- (v) expenditure classified by the order of the Governor-General in Council as
 - (a) ecclesiastical ;
 - (b) political ;
 - (c) defence.

(4) If any question arises whether any proposed appropriation of revenue or moneys does or does not relate to the above heads, the decision of the Governor-General on the question shall be final.

(5) The proposals of the Governor-General in Council for the appropriation of revenue or moneys relating to heads of expenditure not specified in the above heads shall be submitted to the vote of the legislative assembly in the form of demands for grants.

(6) The legislative assembly may assent or refuse its assent to any demand or may reduce the amount referred to in any demand by a reduction of the whole grant.

(7) The demands as voted by the legislative assembly shall be submitted to the Governor-General in Council, who shall, if he declares that he is satisfied that any demand which has been refused by the legislative assembly is essential to the discharge of his responsibilities, act as if it had been assented to, notwithstanding the withholding of such assent, or the reduction of the amount therein referred to, by the legislative assembly.

(8) Notwithstanding anything in this section, the Governor-General shall have power, in cases of emergency, to authorise such expenditure as may, in his opinion, be necessary for the safety or tranquillity of British India or any part thereof.

26. (1) Where either chamber of the Indian legislature refuses to introduce, or fails to pass in a form recommended by the Governor-General, any Bill, the Governor-General may certify that the passage of the Bill is essential for the safety, tranquillity or interests of British India or any part thereof, and thereupon—

- (a) If the Bill has already been passed by the other chamber, the Bill shall, on signature by the Governor-General,

Provision for case of failure to pass legislation.

(3) The proposals of the Governor-General in Council for the appropriation of revenue or moneys relating to the following heads of expenditure shall not be submitted to the vote of the legislative assembly, nor shall they be open to discussion by either chamber at the time when the annual statement is under consideration, unless the Governor-General otherwise directs—

- (i) interest and sinking fund charges on loans ; and
- (ii) expenditure of which the amount is prescribed by or under any law ; and
- (iii) salaries and pensions of persons appointed by or with the approval of His Majesty or by the Secretary of State in Council ; and
- (iv) salaries of chief commissioners and judicial commissioners ; and
- (v) expenditure classified by the order of the Governor-General in Council as
 - (a) ecclesiastical ;
 - (b) political ;
 - (c) defence.

(4) If any question arises whether any proposed appropriation of revenue or moneys does or does not relate to the above heads, the decision of the Governor-General on the question shall be final.

(5) The proposals of the Governor-General in Council for the appropriation of revenue or moneys relating to heads of expenditure not specified in the above heads shall be submitted to the vote of the legislative assembly in the form of demands for grants.

(6) The legislative assembly may assent or refuse its assent to any demand or may reduce the amount referred to in any demand by a reduction of the whole grant.

(7) The demands as voted by the legislative assembly shall be submitted to the Governor-General in Council, who shall, if he declares that he is satisfied that any demand which has been refused by the legislative assembly is essential to the discharge of his responsibilities, act as if it had been assented to, notwithstanding the withholding of such assent, or the reduction of the amount therein referred to, by the legislative assembly.

(8) Notwithstanding anything in this section, the Governor-General shall have power, in cases of emergency, to authorise such expenditure as may, in his opinion, be necessary for the safety or tranquillity of British India or any part thereof.

26. (1) Where either chamber of the Indian legislature refuses to introduce, or fails to pass in a form recommended by the Governor-General, any Bill, the Governor-General may certify that the passage of the Bill is essential for the safety, tranquillity or interests of British India or any part thereof, and thereupon—

- (a) If the Bill has already been passed by the other chamber, the Bill shall, on signature by the Governor-General,

Provision for case of failure to pass legislation.

A.D.1919.

notwithstanding that it has not been consented to by both chambers, forthwith become an Act of the Indian legislature in the form of the Bill as originally introduced or proposed to be introduced in the Indian legislature, or (as the case may be) in the form recommended by the Governor-General; and

- (b) If the Bill has not already been so passed, the Bill shall be laid before the other chamber, and, if consented to by that chamber in the form recommended by the Governor-General, shall become an Act as aforesaid on the signification of the Governor-General's assent, or, if not so consented to, shall, on signature by the Governor-General, become an Act as aforesaid.

(2) Every such Act shall be expressed to be made by the Governor-General, and shall, as soon as practicable after being made, be laid before both Houses of Parliament, and shall not have effect until it has received His Majesty's assent, and shall not be presented for His Majesty's assent until copies thereof have been laid before each House of Parliament for not less than eight days on which that House has sat; and upon the signification of such assent by His Majesty in Council, and the notification thereof by the Governor-General, the Act shall have the same force and effect as an Act passed by the Indian legislature and duly assented to:

Provided that, where in the opinion of the Governor-General a state of emergency exists which justifies such action, the Governor-General may direct that any such Act shall come into operation forthwith, and thereupon the Act shall have such force and effect as aforesaid, subject, however, to disallowance by His Majesty in Council.

powers
of Indian
legisla-
ture.

27.—(1) In addition to the measures referred to in subsection (2) of section sixty-seven of the principal Act, as requiring the previous sanction of the Governor-General, it shall not be lawful without such previous sanction to introduce at any meeting of either chamber of the Indian legislature any measure—

- (a) regulating any provincial subject, or any part of a provincial subject, which has not been declared by rules under the principal Act to be subject to legislation by the Indian legislature; or
- (b) repealing or amending any Act of a local legislature; or
- (c) repealing or amending any Act or ordinance made by the Governor-General.

(2) Where in either chamber of the Indian legislature any Bill has been introduced, or is proposed to be introduced, or any amendment to a Bill is moved, or proposed to be moved, the Governor-General may certify that the Bill, or any clause of it, or the amendment, affects the safety or tranquillity of British India, or any part thereof, and may direct that no proceedings, or that no further proceedings,

A.D.1919.

notwithstanding that it has not been consented to by both chambers, forthwith become an Act of the Indian legislature in the form of the Bill as originally introduced or proposed to be introduced in the Indian legislature, or (as the case may be) in the form recommended by the Governor-General; and

- (b) If the Bill has not already been so passed, the Bill shall be laid before the other chamber, and, if consented to by that chamber in the form recommended by the Governor-General, shall become an Act as aforesaid on the signification of the Governor-General's assent, or, if not so consented to, shall, on signature by the Governor-General, become an Act as aforesaid.

(2) Every such Act shall be expressed to be made by the Governor-General, and shall, as soon as practicable after being made, be laid before both Houses of Parliament, and shall not have effect until it has received His Majesty's assent, and shall not be presented for His Majesty's assent until copies thereof have been laid before each House of Parliament for not less than eight days on which that House has sat; and upon the signification of such assent by His Majesty in Council, and the notification thereof by the Governor-General, the Act shall have the same force and effect as an Act passed by the Indian legislature and duly assented to:

Provided that, where in the opinion of the Governor-General a state of emergency exists which justifies such action, the Governor-General may direct that any such Act shall come into operation forthwith, and thereupon the Act shall have such force and effect as aforesaid, subject, however, to disallowance by His Majesty in Council.

exercise of the powers of superintendence, direction, and control, A.D. 1919.
 vested in the Secretary of State and the Secretary of State in Council, —
 by the principal Act, or otherwise, in such manner as may appear Secretary
 necessary or expedient in order to give effect to the purposes of this of State.
 Act

Before any rules are made under this section relating to subjects other than transferred subjects, the rules proposed to be made shall be laid in draft before both Houses of Parliament, and such rules shall not be made unless both Houses by resolution approve the draft either without modification or addition, or with modifications or additions to which both Houses agree, but upon such approval being given the Secretary of State in Council may make such rules in the form in which they have been approved, and such rules on being made shall be of full force and effect.

Any rules relating to transferred subjects made under this section shall be laid before both Houses of Parliament as soon as may be after they are made, and, if an Address is presented to His Majesty by either House of Parliament within the next thirty days on which that House has sat after the rules are laid before it praying that the rules or any of them may be annulled, His Majesty in Council may annul the rules or any of them, and those rules shall thenceforth be void, but without prejudice to the validity of anything previously done thereunder.

34. So much of section five of the principal Act as relates to orders and communications sent to India from the United Kingdom and to orders made in the United Kingdom, and sections eleven, twelve, thirteen, and fourteen of the principal Act, shall cease to have effect, and the procedure for the sending of orders and communications to India and in general for correspondence between the Secretary of State and the Governor-General in Council or any local government shall be such as may be prescribed by order of the Secretary of State in Council. Correspondence between Secretary of State and India.

35. His Majesty may by Order in Council make provision for the appointment of a High Commissioner for India in the United Kingdom, and for the pay, pension, powers, duties, and conditions of employment of the High Commissioner and of his assistants; and the Order may further provide for delegating to the High Commissioner any of the powers previously exercised by the Secretary of State or the Secretary of State in Council, whether under the principal Act or otherwise, in relation to making contracts, and may prescribe the conditions under which he shall act on behalf of the Governor-General in Council or any local government. High Commissioner for India.

PART IV.

THE CIVIL SERVICES IN INDIA.

36. (1) Subject to the provisions of the principal Act and of the rules made thereunder, every person in the civil service of the Crown The civil services in India.

A.D.1919. in India holds office during His Majesty's pleasure, and may be employed in any manner required by a proper authority within the scope of his duty, but no person in that service may be dismissed by any authority subordinate to that by which he was appointed, and the Secretary of State in Council may (except so far as he may provide by rules to the contrary) reinstate any person in that service who has been dismissed.

If any such person appointed by the Secretary of State in Council thinks himself wronged by an order of an official superior in a governor's province, and on due application made to that superior does not receive the redress to which he may consider himself entitled, he may, without prejudice to any other right of redress, complain to the governor of the province in order to obtain justice, and the governor is hereby directed to examine such complaint and require such action to be taken thereon as may appear to him to be just and equitable.

(2) The Secretary of State in Council may make rules for regulating the classification of the civil services in India, the methods of their recruitment, their conditions of service, pay and allowances, and discipline and conduct. Such rules may, to such extent and in respect of such matters as may be prescribed, delegate the power of making rules to the Governor-General in Council or to local governments, or authorise the Indian legislature or local legislatures to make laws regulating the public services :

Provided that every person appointed before the commencement of this Act by the Secretary of State in Council to the civil service of the Crown in India shall retain all his existing or accruing rights, or shall receive such compensation for the loss of any of them as the Secretary of State in Council may consider just and equitable.

(3) The right to pensions and the scale and conditions of pensions of all persons in the civil service of the Crown in India appointed by the Secretary of State in Council shall be regulated in accordance with the rules in force at the time of the passing of this Act. Any such rules may be varied or added to by the Secretary of State in Council and shall have effect as so varied or added to, but any such variation or addition shall not adversely affect the pension of any member of the service appointed before the date thereof.

Nothing in this section or in any rule thereunder shall prejudice the rights to which any person may, or may have, become entitled under the provisions in relation to pensions contained in the East India Annuity Funds Act, 1874.

(4) For the removal of doubts, it is hereby declared that all rules or other provisions in operation at the time of the passing of this Act, whether made by the Secretary of State in Council or by any other authority, relating to the civil service of the Crown in India, were duly made in accordance with the powers in that behalf, and are confirmed, but any such rules or provisions may be revoked, varied, or added to by rules or laws made under this section.

A.D.1919. in India holds office during His Majesty's pleasure, and may be employed in any manner required by a proper authority within the scope of his duty, but no person in that service may be dismissed by any authority subordinate to that by which he was appointed, and the Secretary of State in Council may (except so far as he may provide by rules to the contrary) reinstate any person in that service who has been dismissed.

If any such person appointed by the Secretary of State in Council thinks himself wronged by an order of an official superior in a governor's province, and on due application made to that superior does not receive the redress to which he may consider himself entitled, he may, without prejudice to any other right of redress, complain to the governor of the province in order to obtain justice, and the governor is hereby directed to examine such complaint and require such action to be taken thereon as may appear to him to be just and equitable.

(2) The Secretary of State in Council may make rules for regulating the classification of the civil services in India, the methods of their recruitment, their conditions of service, pay and allowances, and discipline and conduct. Such rules may, to such extent and in respect of such matters as may be prescribed, delegate the power of making rules to the Governor-General in Council or to local governments, or authorise the Indian legislature or local legislatures to make laws regulating the public services :

Provided that every person appointed before the commencement of this Act by the Secretary of State in Council to the civil service of the Crown in India shall retain all his existing or accruing rights, or shall receive such compensation for the loss of any of them as the Secretary of State in Council may consider just and equitable.

(3) The right to pensions and the scale and conditions of pensions of all persons in the civil service of the Crown in India appointed by the Secretary of State in Council shall be regulated in accordance with the rules in force at the time of the passing of this Act. Any such rules may be varied or added to by the Secretary of State in Council and shall have effect as so varied or added to, but any such variation or addition shall not adversely affect the pension of any member of the service appointed before the date thereof.

Nothing in this section or in any rule thereunder shall prejudice the rights to which any person may, or may have, become entitled under the provisions in relation to pensions contained in the East India Annuity Funds Act, 1874.

(4) For the removal of doubts, it is hereby declared that all rules or other provisions in operation at the time of the passing of this Act, whether made by the Secretary of State in Council or by any other authority, relating to the civil service of the Crown in India, were duly made in accordance with the powers in that behalf, and are confirmed, but any such rules or provisions may be revoked, varied, or added to by rules or laws made under this section.

37. (1) Notwithstanding anything in section ninety-seven of the principal Act, the Secretary of State may make appointments to the Indian Civil Service of persons domiciled in India, in accordance with such rules as may be prescribed by the Secretary of State in Council with the concurrence of the majority of votes at a meeting of the Council of India.

commis-
sion.

(2) The public service commission shall discharge, in regard to recruitment and control of the public services in India, such functions as may be assigned thereto by rules made by the Secretary of State in Council.

39. (1) An auditor-general in India shall be appointed by the Secretary of State in Council, and shall hold office during His Majesty's pleasure. The Secretary of State in Council shall, by rules, make provision for his pay, powers, duties, and conditions of employment, or for the discharge of his duties in the case of a temporary vacancy or absence from duty. Financial
control.

(2) Subject to any rules made by the Secretary of State in Council, no office may be added to or withdrawn from the public service, and the emoluments of no post may be varied, except after consultation with such finance authority as may be designated in the rules, being an authority of the province or of the Government of India, according as the post is or is not under the control of a local government.

40. Rules made under this Part of this Act shall not be made except with the concurrence of the majority of votes at a meeting of the Council of India. Rules
under
Part IV.

PART V.

STATUTORY COMMISSION.

41. (1) At the expiration of ten years after the passing of this Act the Secretary of State, with the concurrence of both Houses of Statutory
commis-
sion.

The first of these was the discovery of gold in California in 1848. This led to a great influx of people to California, and the state became a free state in 1850. The second was the discovery of gold in Colorado in 1859. This led to a great influx of people to Colorado, and the state became a free state in 1876. The third was the discovery of gold in Nevada in 1859. This led to a great influx of people to Nevada, and the state became a free state in 1864.

The fourth was the discovery of gold in Idaho in 1860. This led to a great influx of people to Idaho, and the state became a free state in 1890. The fifth was the discovery of gold in Montana in 1865. This led to a great influx of people to Montana, and the state became a free state in 1889. The sixth was the discovery of gold in Wyoming in 1869. This led to a great influx of people to Wyoming, and the state became a free state in 1890.

The seventh was the discovery of gold in Utah in 1871. This led to a great influx of people to Utah, and the state became a free state in 1896. The eighth was the discovery of gold in Arizona in 1876. This led to a great influx of people to Arizona, and the state became a free state in 1909. The ninth was the discovery of gold in New Mexico in 1879. This led to a great influx of people to New Mexico, and the state became a free state in 1906. The tenth was the discovery of gold in Texas in 1881. This led to a great influx of people to Texas, and the state became a free state in 1845.

The eleventh was the discovery of gold in Oregon in 1882. This led to a great influx of people to Oregon, and the state became a free state in 1859. The twelfth was the discovery of gold in Washington in 1883. This led to a great influx of people to Washington, and the state became a free state in 1889. The thirteenth was the discovery of gold in Alaska in 1898. This led to a great influx of people to Alaska, and the state became a free state in 1958. The fourteenth was the discovery of gold in Hawaii in 1900. This led to a great influx of people to Hawaii, and the state became a free state in 1959.

The fifteenth was the discovery of gold in the Philippines in 1901. This led to a great influx of people to the Philippines, and the state became a free state in 1946. The sixteenth was the discovery of gold in the Marshall Islands in 1944. This led to a great influx of people to the Marshall Islands, and the state became a free state in 1979.

The seventeenth was the discovery of gold in the Federated States of Micronesia in 1979. This led to a great influx of people to the Federated States of Micronesia, and the state became a free state in 1979. The eighteenth was the discovery of gold in the Republic of the Marshall Islands in 1979. This led to a great influx of people to the Republic of the Marshall Islands, and the state became a free state in 1979.

A.D. 1919.

Parliament, shall submit for the approval of His Majesty the names of persons to act as a commission for the purposes of this section.

(2) The persons whose names are so submitted, if approved by His Majesty, shall be a commission for the purpose of inquiring into the working of the system of government, the growth of education, and the development of representative institutions, in British India, and matters connected therewith, and the commission shall report as to whether and to what extent it is desirable to establish the principle of responsible government, or to extend, modify, or restrict the degree of responsible government then existing therein, including the question whether the establishment of second chambers of the local legislatures is or is not desirable.

(3) The commission shall also inquire into and report on any other matter affecting British India and the provinces, which may be referred to the commission by His Majesty.

PART VI.

GENERAL.

Modifica-
tion of
s. 124 of
principal
Act.

42. Notwithstanding anything in section one hundred and twenty-four of the principal Act, if any member of the Governor-General's Executive Council or any member of any local government was at the time of his appointment concerned or engaged in any trade or business, he may, during the term of his office, with the sanction in writing of the Governor-General, or, in the case of ministers, of the governor of the province, and in any case subject to such general conditions and restrictions as the Governor-General in Council may prescribe, retain his concern or interest in that trade or business, but shall not, during that term, take part in the direction or management of that trade or business.

Significa-
tion of
Royal
Assent.

43. Any assent or disallowance by His Majesty, which under the principal Act is required to be signified through the Secretary of State in Council, shall, as from the passing of this Act, be signified by His Majesty in Council.

Power to
make
rules.

44.—(1) Where any matter is required to be prescribed or regulated by rules under the principal Act and no special provision is made as to the authority by whom the rules are to be made, the rules shall be made by the Governor-General in Council, with the sanction of the Secretary of State in Council, and shall not be subject to repeal or alteration by the Indian legislature or by any local legislature.

(2) Any rules made under this Act or under the principal Act may be so framed as to make different provision for different provinces.

(3) Any rules to which subsection (1) of this section applies shall be laid before both Houses of Parliament as soon as may be after they are made, and, if an Address is presented to His Majesty by either House of Parliament within the next thirty days on which that House has sat after the rules are laid before it praying that the

Parliament, shall submit for the approval of His Majesty the names of persons to act as a commission for the purposes of this section.

(2) The persons whose names are so submitted, if approved by His Majesty, shall be a commission for the purpose of inquiring into the working of the system of government, the growth of education, and the development of representative institutions, in British India, and matters connected therewith, and the commission shall report as to whether and to what extent it is desirable to establish the principle of responsible government, or to extend, modify, or restrict the degree of responsible government then existing therein, including the question whether the establishment of second chambers of the local legislatures is or is not desirable.

(3) The commission shall also inquire into and report on any other matter affecting British India and the provinces, which may be referred to the commission by His Majesty.

PART VI.

GENERAL.

Modifica-
tion of
s. 124 of
principal
Act.

42. Notwithstanding anything in section one hundred and twenty-four of the principal Act, if any member of the Governor-General's Executive Council or any member of any local government was at the time of his appointment concerned or engaged in any trade or business, he may, during the term of his office, with the sanction in writing of the Governor-General, or, in the case of ministers, of the governor of the province, and in any case subject to such general conditions and restrictions as the Governor-General in Council may prescribe, retain his concern or interest in that trade or business, but shall not, during that term, take part in the direction or management of that trade or business.

Significa-
tion of
Royal
Assent.

43. Any assent or disallowance by His Majesty, which under the principal Act is required to be signified through the Secretary of State in Council, shall, as from the passing of this Act, be signified by His Majesty in Council.

Power to
make
rules.

44.—(1) Where any matter is required to be prescribed or regulated by rules under the principal Act and no special provision is made as to the authority by whom the rules are to be made, the rules shall be made by the Governor-General in Council, with the sanction of the Secretary of State in Council, and shall not be subject to repeal or alteration by the Indian legislature or by any local legislature.

(2) Any rules made under this Act or under the principal Act may be so framed as to make different provision for different provinces.

(3) Any rules to which subsection (1) of this section applies shall be laid before both Houses of Parliament as soon as may be after they are made, and, if an Address is presented to His Majesty by either House of Parliament within the next thirty days on which that House has sat after the rules are laid before it praying that the

rule or any of them may be annulled, His Majesty in Council may annul the rule or any of them, and those rules shall thenceforth be void, but without prejudice to the validity of anything previously done thereunder: A.D. 1919.

Provided that the Secretary of State may direct that any rules to which this section applies shall be laid in draft before both Houses of Parliament, and in such case the rules shall not be made unless both Houses by resolution approve the draft either without modification or addition, or with modifications or additions to which both Houses agree, but, upon such approval being given, the rules may be made in the form in which they have been approved, and such rule, on being so made shall be of full force and effect, and shall not require to be further laid before Parliament.

45. (1) The amendments set out in Parts I and II of the Second Schedule to this Act, being amendments to incorporate the provisions of this Act in the principal Act, and further amendments consequential on or arising out of those provisions, shall be made in the principal Act, and any question of interpretation shall be settled by reference to the principal Act as so amended. The provisions of the principal Act specified in Part III of that schedule, being provisions which are obsolete or unnecessary, or which require amendment in detail, are hereby repealed or modified, and shall be dealt with, in the manner shown in the second column of that schedule. Amend-ments of principal Act to carry Act into effect, &c.

(2) Every enactment and word which is directed by the Government of India (Amendment) Act, 1916, or by this section and the Second Schedule to this Act, to be substituted for or added to any portion of the Government of India Act, 1915, shall form part of the Government of India Act, 1915, in the place assigned to it by the Government of India (Amendment) Act, 1916, or that schedule; and the Government of India Act, 1915, and all Acts, including this Act, which refer thereto, shall, after the commencement of this Act, be construed as if the said enactment or word had been enacted in the Government of India Act, 1915, in the place so assigned, and, where it is substituted for another enactment or word, had been so enacted in lieu of that enactment or word.

A copy of the Government of India Act, 1915, with the amendments, whether by way of substitution, addition, or omission, required by the Government of India (Amendment) Act, 1916, and by this section and the Second Schedule to this Act, shall be prepared and certified by the Clerk of the Parliaments, and deposited with the Rolls of Parliament, and His Majesty's printer shall print, in accordance with the copy so certified, all copies of the Government of India Act, 1915, which are printed after the passing of this Act, and the Government of India Act, 1915, as so amended, may be cited as "The Government of India Act."

Subsection (3) of section eight of the Government of India (Amendment) Act, 1916, is hereby repealed.

rules or any of them may be annulled, His Majesty in Council may annul the rules or any of them, and those rules shall thenceforth be void, but without prejudice to the validity of anything previously done thereunder: A.D. 1919.

Provided that the Secretary of State may direct that any rules to which this section applies shall be laid in draft before both Houses of Parliament, and in such case the rules shall not be made unless both Houses by resolution approve the draft either without modification or addition, or with modifications or additions to which both Houses agree, but, upon such approval being given, the rules may be made in the form in which they have been approved, and such rules on being so made shall be of full force and effect, and shall not require to be further laid before Parliament.

45. (1) The amendments set out in Parts I and II of the Second Schedule to this Act, being amendments to incorporate the provisions of this Act in the principal Act, and further amendments consequential on or arising out of those provisions, shall be made in the principal Act, and any question of interpretation shall be settled by reference to the principal Act as so amended. The provisions of the principal Act specified in Part III of that schedule, being provisions which are obsolete or unnecessary, or which require amendment in detail, are hereby repealed or modified, and shall be dealt with, in the manner shown in the second column of that schedule. Amend-
ments of
principal
Act to
carry Act
into
effect, &c.

(2) Every enactment and word which is directed by the Government of India (Amendment) Act, 1916, or by this section and the Second Schedule to this Act, to be substituted for or added to any portion of the Government of India Act, 1915, shall form part of the Government of India Act, 1915, in the place assigned to it by the Government of India (Amendment) Act, 1916, or that schedule; and the Government of India Act, 1915, and all Acts, including this Act, which refer thereto, shall, after the commencement of this Act, be construed as if the said enactment or word had been enacted in the Government of India Act, 1915, in the place so assigned, and, where it is substituted for another enactment or word, had been so enacted in lieu of that enactment or word.

A copy of the Government of India Act, 1915, with the amendments, whether by way of substitution, addition, or omission, required by the Government of India (Amendment) Act, 1916, and by this section and the Second Schedule to this Act, shall be prepared and certified by the Clerk of the Parliaments, and deposited with the Rolls of Parliament, and His Majesty's printer shall print, in accordance with the copy so certified, all copies of the Government of India Act, 1915, which are printed after the passing of this Act, and the Government of India Act, 1915, as so amended, may be cited as "The Government of India Act."

Subsection (3) of section eight of the Government of India (Amendment) Act, 1916, is hereby repealed.

sions

47.—(1) This Act may be cited as the Government of India Act, 1919, and the principal Act, as amended by any Act for the time being in force, may be cited as the Government of India Act.

(2) This Act shall come into operation on such date or dates as the Governor General in Council, with the approval of the Secretary of State in Council, may appoint, and different dates may be appointed for different provisions of this Act, and for different parts of India.

On the dates appointed for the coming into operation of the provisions of this Act as respects any executive or legislative council all the members of the council then in office shall go out of office, but may, if otherwise qualified, be re-appointed, re-nominated, or re-elected, as the case may be, in accordance with the provisions of the principal Act as amended by this Act.

(3) Any reference in any enactment, whether an Act of Parliament or made by any authority in British India, or in any rules, regulations or orders made under any such enactment, or in any letters patent or other document, to any enactment repealed by the principal Act, shall for all purposes be construed as references to the principal Act as amended by this Act, or to the corresponding provision thereof.

(4) Any reference in any enactment in force in India, whether an Act of Parliament or made by any authority in British India, or in any rules, regulations, or orders made under any such enactment, or in any letters patent or other document, to any Indian legislative authority, shall for all purposes be construed as references to the corresponding authority constituted by the principal Act as amended by this Act.

(5) If any difficulty arises as to the first establishment of the Indian legislature or any legislative council after the commencement of this Act or otherwise in first giving effect to the provisions of this Act, the Secretary of State in Council or the Governor General in Council, as occasion may require, may by order do anything which appears to them necessary for the purpose of removing the difficulty.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities related to the business. It emphasizes the need for transparency and accountability in financial reporting.

2. The second part of the document outlines the various methods and techniques used to collect and analyze data. It includes a detailed description of the experimental setup and the procedures followed during the study.

3. The third part of the document presents the results of the study, showing the data collected and the analysis performed. It includes tables and graphs to illustrate the findings.

4. The fourth part of the document discusses the conclusions drawn from the study and the implications of the findings. It highlights the key points and provides recommendations for future research.

5. The fifth part of the document contains the references and bibliography, listing the sources used in the study.

6. The sixth part of the document is the appendix, which contains additional information and data related to the study.

7. The seventh part of the document is the conclusion, summarizing the main findings and the overall outcome of the study.

8. The eighth part of the document is the acknowledgments, thanking the individuals and organizations that supported the study.

9. The ninth part of the document is the index, providing a quick reference to the various sections of the document.

10. The tenth part of the document is the glossary, defining the key terms and concepts used in the study.
